# Glazing Options

Please See attached Section Drawings of the New Windows and French Doors.

Both Windows and Door Casments and Frames are to match the original windows and be manufactured in Timber.

New Windows - Our proposal for the New Window Glazing is to be in 6.4mm Individual Pane Single Glazed matching the original windows

New French Doors – Our proposal for the New French Door Glazing is to be Double Glazed. Our reason for this is safety, security and thermal benefits. As the doors are to be glazed top to bottom we feel it would be a safety hazard to have single pane glass particularly having young children running in and out of the garden via the new doors. We have provided two options for the double glazed units, our preferred choice is the 20mm double glazed unit with stuck on mouldings to match original window style. We have also provided an additional double glazed option of a 16mm slimline individual panes which would be our second choice if the preferred option was not acceptable. Our reasons for this are the thermal benefits of the 20mm and the cost.
