TREE REPORT

Address

39 South View

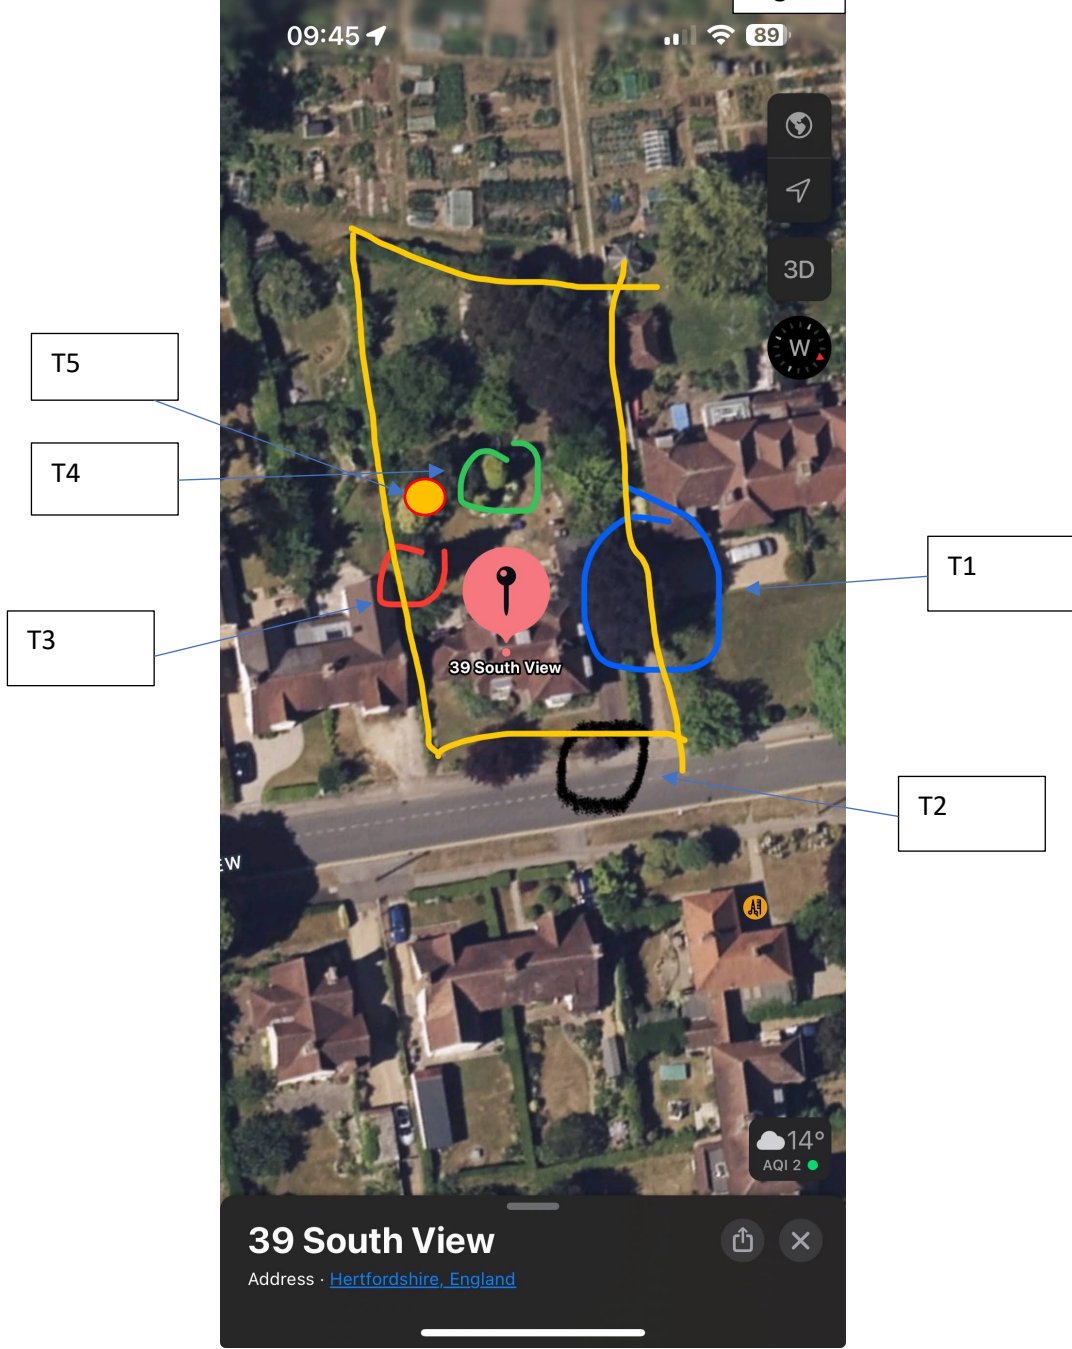

Letchworth

SG6 3JJ

Assessment notes

We inspected 5 x trees at the above address and propose the following recommendations. Locations are shown on the following sketch plan (Fig 1) with the approximate site boundary denoted in yellow.

Fig 1.

T1 (Blue) – Copper Beech (Fig 2,3,4,5) – Prune branches by approximately 2 to 3 metres, particular focus on Eastern and Western aspects which are encroaching on neighbouring properties.

Fig 2.

Fig 3.

Fig 4.

Fig 5.

T2 – (Black) – Cherry tree – This tree is in poor health, potentially following inadequate pruning practices (Fig 6 & 7). The client wishes to remove and replant with either the same species or a suitable native species.

Fig 6.

Fig 7.

T3 – Cypress – (Red) (Fig 8) – Concerns are raised with the proximity of this species to neighbouring properties. The client wishes to fell and replant with a more suitably sized native species in a different area, such as a Rowan.

Fig 8.

T4 – Cypress (Green) – This tree is causing damage to the pond and as such, is not in a suitable location (Fig 9). The client wishes to fell and replant elsewhere with a suitably sized native species such as a Birch.

Fig 9.

T5 – Pine – Fig 10. Prune branches overhanging boundary line back to main stem to balance the crown of the tree as an asymmetrical crown can increase the risk of failure

Fig 10.
