Dear Paul Chaston,

Location:	Land East Of Bedford Road And North Of The Priory School Hitchin Hertfordshire
Proposal:	Creation of 50 no. one, two, three and four bedroom houses and apartments plus associated landscaping, open space, roads, drainage and other infrastructure.
Application Number:	25/03234/FP

I write with regards to the above, to provide a response on behalf of the county council as the Minerals and Waste Planning Authority.

Minerals

In relation to minerals, the site is not located within the 'Sand and Gravel Belt' as identified in Hertfordshire County Council's adopted Minerals Local Plan 2002 – 2016. The Sand and Gravel Belt is a geological area that spans across the southern part of the county and contains the most concentrated deposits of sand and gravel throughout Hertfordshire.

Whilst the development does not fall within the Sand and Gravel Belt, British Geological Survey Data does identify that there could potentially be some sand/gravel deposits beneath the proposed development site.

Opportunistic extraction refers to cases where preparation of a site for built development, such as excavating the foundations and footings or landscaping works, may result in suitable material being uncovered that could be extracted and processed for use on site as part of the development.

The Minerals Planning Authority would like to encourage the opportunistic extraction and subsequent use of sand and gravel deposits within developments wherever possible. Opportunistic use of minerals will reduce the need to import sand and gravel to the site and make sustainable use of these valuable resources.

Waste

Government policy seeks to ensure that all planning authorities take responsibility for waste management. This is reflected in the County Council's adopted waste Development Plan Documents (DPDs). In particular, these documents seek to promote the sustainable management of waste in the county and encourage Local Planning Authorities to have regard to the potential for minimising waste generated by development.

The National Planning Policy for Waste (October 2014) sets out the following:

'When determining planning applications for non-waste development, local planning authorities should, to the extent appropriate to their responsibilities, ensure that:

- the likely impact of proposed, non- waste related development on existing waste management facilities, and on sites and areas allocated for waste management, is acceptable and does not prejudice the implementation of the waste hierarchy and/or the efficient operation of such facilities;*
- new, non-waste development makes sufficient provision for waste management and promotes good design to secure the integration of waste management facilities with the rest of the development and, in less developed areas, with the local landscape. This includes providing adequate storage facilities at residential premises, for example by ensuring that there is sufficient and discrete provision for bins, to facilitate a high quality, comprehensive and frequent household collection service;*
- the handling of waste arising from the construction and operation of development maximises reuse/recovery opportunities, and minimises off-site disposal.'*

The supporting documents to this application make no reference to the adopted Waste Core Strategy and Development Management Policies DPD (2012). The policies in the adopted DPD (2012) that relate to this proposal, and which must be considered by the Local Planning Authority in determining the application, include Policy 1: Strategy for the Provision for Waste Management Facilities (namely the penultimate paragraph of the policy) and Policy 12: Sustainable Design, and Demolition.

Many of the policy requirements can be met through the imposition of planning conditions.

As a general point, built development should have regard to the overall infrastructure required to support it, including where appropriate a sufficient number of waste storage areas that should be integrated accordingly and facilitate the separate storage of recyclable wastes.

Waste Policy 12: Sustainable Design, Construction and Demolition requires all relevant construction projects to be supported by a Site Waste Management Plan (SWMP). The Sustainability Statement submitted alongside this application refers to the Circular Economy on page 8 alongside some key aspirations, as well as providing some targets within 'Checklist 3 – Minimising Carbon Footprint' on pages 19 and 20. These are welcomed by the county council.

The Waste Planning Authority would expect to see a SWMP prepared to support this application. The SWMP must be prepared and agreed in consultation with the Waste Planning Authority prior to commencement of the project. The SWMP must be implemented throughout the duration of the project, from initial site preparation works to final completion of the construction phase.

By preparing a SWMP prior to commencement, early decisions can be made relating to the management of waste arisings and building supplies made from recycled and secondary materials can be sourced, to help alleviate the demand for primary materials such as virgin sand and gravel. Early planning for waste arisings will help to establish what types of containers/skips are required for the project and when segregation would be best implemented for various waste streams. It will also help in determining the costs of removing waste from the site.

As a minimum, the SWMP should include the following:

Project and People

- Identification of the client
- Identification of the Principal Contractor
- Identification of the person who drafted the SWMP
- Location of the site
- An estimated cost of the project
- Declaration that the client and contractor will comply with the requirements of Duty of care that materials will be handled efficiently and waste managed appropriately (Section 34 of Environmental Protection Act 1990 and Environmental Protection (Duty of Care) Regs 1991)

Estimating Waste

- A description of the types of waste that are expected to arise on site (recorded through the use of 6-digit European Waste Catalogue codes) and an estimated quantity for each of the types (in tonnes)
- Waste management actions for each waste type (i.e., will the waste be re-used or recycled (on-site or off-site?), recovered or disposed of)

Space for Later Recordings

- Space for the recording of actual figures against the estimated figures
- Space for the recording and identification of those responsible for removing the waste from site and details of the sites they will be taking it to
- Space to record explanations for any deviations from what has been set out in the SWMP, including explanations for differences in actual waste arisings compared to the estimates

As a SWMP has not been produced at the planning application stage, the Waste Planning Authority request the following pre-commencement condition be attached to any approved planning application:

Condition: No development shall take place until a Site Waste Management Plan (SWMP) for the site has been submitted to the Local Planning Authority and approved in consultation with the Waste Planning Authority. The SWMP should aim to reduce the amount of waste produced on site and should contain information including estimated types and quantities of waste to arise from construction and waste management actions for each waste type. The development shall be carried out in accordance with the approved SWMP.

Reason: To promote the sustainable management of waste arisings and contribution towards resource efficiency, in accordance with Policy 12 of the Hertfordshire Waste Core Strategy and Development Management Policies Development Plan Document (2012).

Yours sincerely,

Finlay Banks

Planning Officer - Minerals and Waste Policy.
