1 Introduction

1.1 The Purpose of This Assessment

The site is located on Glebe Road in Letchworth Garden City and comprises a single light industrial building, divided into separate commercial units, with a parking area to the rear and single access road from Glebe Road. We understand that Wheatley PLC (our client) proposes to redevelop the site for future residential use, with 9No. 3 bedroom houses in the location of the existing building with garden areas to the north and communal parking to the south.

We have been commissioned by Wheatley PLC to undertake a Phase One Environmental Report (also known as a Preliminary Risk Assessment).

The purpose of this assessment was to develop an initial conceptual site model of the site and establish whether or not there are potentially unacceptable risks to sensitive receptors from potential contaminants that may be present in the soil and/or groundwater under the site. We have not carried out any intrusive investigation at this time, and have made no measurements of actual contamination levels that may be presents directly as part of this scope of work, but have used information from previous report to assist with our assessment.

Our environmental assessment was undertaken in accordance with the guidelines presented in the Environment Agency (Published 2020, last updated 2023) 'Land Contamination Risk Management (LCRM)' documents and Environment Agency (2016) Guiding Principles for Land Contamination (GPLC).

This report was re-issued in June 2025 to include updated proposed development plans and all changed made to the report are highlighted in blue .

Your attention is drawn to the Notice to Interested Parties included as Attachment One.

1.2 The Scope of This Assessment

Our assessment included:

- A review of geological, hydrogeological and hydrological information to establish environmental sensitivities at the site and in its vicinity;
- A review of environmental data from previous environmental works;
- A review of available historical information to determine the historical use of the site and its immediate surroundings;
- Compilation of a Conceptual Site Model and completion of a Qualitative Risk Assessment;
- Preparation of this report, presenting our findings and conclusions, and any recommendations for further work that we consider appropriate.

The findings and opinions in this review are based upon information obtained from the sources outlined above. Information obtained from third parties has been accepted at face value however we do not guarantee its authenticity. Where practicable the information provided was confirmed from a secondary source such as the review of available municipal records We have not completed a site walkover inspection as part of this initial assessment. A site walkover was completed as part of a previous investigation of the site and we understand that site activities are unchanged. On this basis we do not consider a site walkover would add to our conceptual understanding of the site at this time.

All the activities comprising this assessment were carried out in accordance with the procedures set out in our Quality Manual.

1.3 Previous Reports Relating to the Site

As part of our environmental assessment we have reviewed the report listed in the following table.

Our Ref.	Report Title	Prepared By	Prepared on Behalf of	Date of Issue	Report Reference
Ref.1	Environmental Investigation Report	Subadra Consulting Ltd	Letchworth Garden City Heritage Foundation	September 2017	IN24057 CL001

Our detailed review of this document is provided in Section Three of this report and we have used information from this document, where relevant, in other sections of this report.

Table One: Previous Environmental Reports Relating to the Site

1.4 Proposed Development Plans

Proposed Developments	We understand that Wheatley PLC (our client) proposes to redevelop the site for future residential use, with 9 No. 3 bedroom houses in the location of the existing buildings with garden areas to the north and communal parking to the south. A site plan showing the proposed development plan is provided on below.
Active Planning Applications	We understand that this report is to be submitted in support of a planning application for the site's redevelopment, as detailed above. Whilst our assessment has not been compiled to directly satisfy any specific planning conditions the information contained in this report may assist in satisfying any such requirements, although further works may be required.

2 Desk Study Information

2.1 Site Description, Location and Setting

Site Description	The site comprises a single story brick built light industrial building that has been divided into separate commercial units. There is a small area of landscaping in front of the building, off Glebe Road, and an associated car parking area to the rear of the building with an access road leading from Glebe Road along the western site boundary.		
Grid Reference	522290 233370	Location	The site is located on Glebe Road in Letchworth Garden City, toward the north western end of an industrial estate area to the north of the town centre.
Elevation (approx)	~70m AOD		
Size (approx)	~0.98 ha		

Note: site description obtained from review of Google Streetview images

2.2 Geology, Hydrogeology and Hydrology

	Geological Unit	Description	Estimated Thickness	Data Source
Drift Geology	None recorded at the site location			British Geological Survey
Solid Geology	Holywell Nodular Chalk Formation	WEAK white CHALK nodules in firm putty chalk matrix.	~40m	
Previous Investigation Data	The BGS hold records for several boreholes in the vicinity of the site: ➤ BGS Reference TL23SWQ592, located ~500m south east, records drift deposits to 1.5m, followed by chalk to completion depth of 6m. ➤ BGS reference TL23SW590, located 800m north east, reports 0.4m of superficial deposits followed by 're-molded' chalk to >2m.			
	Our previous site investigation identified underlying geology to comprise a variable thickness of Made Ground under the site, encountered to between 1.1m and 2.6m depth (possibly thickening toward the south western corner of the site), comprising a heterogeneous mixture of predominantly sandy gravel with varying amounts of brick, gravel and flint and some tarmac fragments noted. Beneath the Made Ground we identified weak white closely fractured and blocky chalk yellow brown staining (interpreted as Grade IV / C4 Holywell Nodular Chalk Formation).			Ref.1

Table Five: Regional Geology

	Geological Unit	Environment Agency Aquifer Classification	Data Source
Drift Geology	None recorded at the site location		Environment Agency (EA)
Solid Geology	Holywell Nodular Chalk Formation	Principal Aquifer	
Previous Investigation Data	No groundwater was recorded in the two boreholes referenced above. The nearest BGS Borehole with groundwater data (BGS reference TL23SW136) is located approximately 600m south east of the site. The borehole log described groundwater at ~22mbgl within the Chalk.		BGS
	No groundwater was encountered during our previous investigation, including in the dynamic probe advanced to 8m depth in the location of BH1 and no groundwater was encountered at the base of this probe hole.		Ref.1

Table Six: Regional Hydrogeology

	Description	Distance	Direction	Data Source
Surface Water Features	Shallow land drain	~140m	West	Ordnance Survey

Table Seven: Regional Hydrology

2.3 Site History (Ref.1)

Date	Review of Map – Description of Land Use at Site and in the Immediate Surrounding Area	Potentially Contaminative Land-use	
		On-site	Off-site
1880, 1887, 1899, 1898	Site is located in an undeveloped area. There is a railway line to the south of the site; forming the only significant visible development on the maps.	None	None
1922, 1925,	No visible development at the site. The surrounding area has undergone significant development with many houses and various industrial buildings shown. To the south east of the site is a 'Metal Works'.		Metal works within 500m to East
1937, 1950, 1960, 1966, 1968	No visible development at the site. The general area has undergone more development, new engineering buildings visible in the vicinity of the site. Industries visible include metal works, printing works, machinery and other engineering.		Metal works and other engineering industries to south
1980	There is a large central building shown at the site (consistent with the current site configuration). The usage of the building is not specified on the map. The surrounding area has undergone some additional development with the industrial area south of the site now including new buildings and a number of various engineering and manufacturing works.	Structure on site, "Warehouse"	Various engineering works to the south and east
1983	No significant changes visible at the site but the building is now shown as individual units. The surrounding area has undergone some development with more residential looking properties.

2.3.1 Planning Records

Date	Application Number	Local Planning Authority – Planning Records (from North Hertfordshire District Council website)	Evidence of Development
September 2018	08/01760/1	Change of use from Class B1 (Light Industrial) to A1 (Dog Grooming)	None
December 2018	18/03247/FP	Erection of 9 x 3 bedroom dwellings following demolition of existing industrial buildings, with all associated landscaping and ancillary works.	No - Application was withdrawn

Table Ten: Summary of Online Planning Records

2.4 Additional Information

2.4.1 Pollution Incidents

We have not identified any pollution incidents associated with the site or the surrounding area (<250m).

2.4.2 Preliminary Flood Risk Assessment

Flood Risk Zone	Flood Risk	Data Source
Zone 1	An area where flooding from rivers and the sea is very unlikely. There is less than a 0.1 per cent (1 in 1000) chance of flooding occurring each year. The majority of England and Wales falls within this area. A flood risk assessment is not likely to be required as part of future planning applications.	Environment Agency

Table Eleven: Preliminary Flood Risk Assessment

2.4.3 Geo-Hazards

Risk	Description	Data Source
Risk of Coal Mining	The site is not located in an area considered to be at potential risk from coal mining.	The Coal Authority
Potential for Unexploded Ordnance	The site has been classified as being at 'low' risk of unexploded ordnance.	Zetica Ltd

Table Twelve: Coal Mining and UXO Risk

Client: Wheatley PLC	Phase One Environmental Desk Study Report	Report	IN24057 CL 001a
		Date	June 2025
		Page	9

Glebe Road, Letchworth

2.4.4 Preliminary Hazardous Ground Gas Risk Assessment

Risk	Description	Data Source
Radon Risk	The radon 'Affected Area' maps that have been produced from radon measurements in homes by Public Health England can be used to indicate whether or not radon is likely to be a hazard in typical workplaces and can be used to inform risk assessment and need for radon measurements. The site is located in an area where the National Radiological Protection Board have determined that <1% houses exceed the recommended Action Level for radon for existing homes in the UK of 200Bqm⁻³ (averaged over a year). The site is therefore in an area of low radon risk and no radon protective measures are necessary in the construction of new houses.	Public Health England
Nearest Landfill	The Environment Agency records show that there are no current or past landfill sites within 250m of the site.	Environment Agency
Degradable material within Made Ground	Our previous investigation confirm the presence of Made Ground beneath the site. This comprised a heterogeneous mixture of predominantly sandy gravel with varying amounts of brick, gravel and flint and some tarmac fragments noted. No evidence of degradable materials was encountered.	Ref.1
Peat and Organic Matter within Alluvial Deposits	No source identified. No superficial deposits shown to be present beneath site or immediate surrounding area. Previous investigation confirmed absence of superficial deposits beneath the site.	BGS
Degradation of spilled or leaked petroleum hydrocarbons	Our previous investigation identified PAH compounds in shallow soils that are present at sufficiently low concentrations that they are likely to degrade and generate significant ground-gas concentrations.	Ref.1
Natural deposits (e.g. coal measure strata).	Near surface bedrock geology comprises Chalk. Carbon Dioxide can be released during the dissolution of chalk, albeit the likelihood that significant ground-gases are generated is very low.	BGS
Organic rich silt formed in water bodies.	No source identified.	Ordnance Survey mapping
Conclusions	Whilst we have identified potential sources of ground-gases, the likelihood that significant ground-gas concentrations and flow is very low. We therefore consider the site is unlikely to be at-risk of impact from concentrations of hazardous ground gases. As such we do not consider monitoring or assessment are required as part of any future investigation works and no special precautions are likely to be required to prevent landfill gas infiltration into the current building or future developments at the site.

Glebe Road, Letchworth

3 Review of Previous Intrusive Investigation

3.1 Site Walkover and Inspection

Our review of our previous site walkover inspection is presented this in the following table.

Item	Details	Data
General Site Information	Buildings	The site building comprised a single story, brick structure with a pitched roof. This has been internally sub-divided into several small commercial units. The upper section of the walls has glass windows. Internally the building appears to be in good condition. Externally the brickwork appears to be in good condition. Doors and windows appear to be in average condition, but still functional (one has been boarded up). There appear to be asbestos cement drain pipes on the buildings outer wall and other evidence of asbestos containing material at various locations inside the building. There was no sign of the (former?) electrical substation in south eastern corner corner of the site. The transformer appeared to have been completely removed.
	Site Boundaries	The property boundaries are secure, with good condition metal fencing along the western side, average to poor condition wooden fencing along the southern boundary and maintained hedges forming the northern and eastern boundaries.
	Site Pavement	➤ Access road from Glebe Road (north western corner) - Concrete, average condition with some wear and tear ➤ Parking area to the south of the building and entrances to the various commercial units - Concrete and tarmac, found in good condition. ➤ Internal - Concrete floors to the commercial units, all in good condition
	General Condition of the Site	The area of the planting / landscaping to the north of the building was a little overgrown, although no pathways are being impeded either on or off site.
	Surface Water Drainage	Surface water drainage from the hard standing areas is collected via a series of pot gullies. These discharge to a series of soak-aways located under the southern portion of the site.
	Foul Drainage	Foul drainage from the site building discharges to the main foul sewer under Glebe Road.
	Potentially Contaminative Activities	We did not observe any potentially contaminative activities or signs of contamination at the site.
	Other Observations	We noted an above ground fuel tank, waste oil tank and various other waste oil containers associated with the neighbouring vehicle repair workshop to the immediate west of the site. These were stored in an area outside of the neighbouring building immediately beyond the boundary fence with the site.

Table Fourteen: Summary of Site Walkover

Date	June 2025
Page	12

Glebe Road, Letchworth

3.3 Details of Investigation

In the tables on the following page we have summarised the findings of the previous investigation carried out at the site (Ref.1).

Item	Description
Purpose	At the time of our investigation, the site was earmarked for future residential use, with an outline scheme comprises terraced houses in the location of the existing building and garden areas to the rear. In order to review the suitability of the site for possible redeveloped, we were commissioned to carry out an environmental site assessment.
Scope of Works	Our scope of works included a desk based environmental appraisal of the site locality, drilling six boreholes to a maximum depth of 5m, a dynamic probe to 8m and a single hand pit in an location inaccessible with the drill rig. We completed chemical analysis of representative soil samples. The results of our investigation were used to compile a conceptual site model and completion of a Generic Quantitative Risk Assessment. We also provided recommendations relating to the proposed redevelopment with respect to the presence of any potential contaminants identified during our investigation;
Geology	Our previous site investigation identified underlying geology to comprise a variable thickness of Made Ground under the site, encountered to between 1.1m and 2.6m depth (possibly thickening toward the south western corner of the site), comprised of a heterogeneous mixture of predominantly sandy gravel with varying amounts of brick, gravel and flint and some tarmac fragments noted. Beneath the Made Ground we identified weak white closely fractured and blocky chalk yellow brown staining (interpreted as Grade IV / C4 Holywell Nodular Chalk Formation).
Hydrogeology	No groundwater was encountered during our investigation, including in the dynamic probe advanced to 8m depth in the location of BH1 and no groundwater was encountered at the base of this probe hole.
Laboratory Testing Results	We identified low concentrations of PAHs in shallow Made Ground from all sampling locations. We concluded this was likely to reflect either the tarmac component we noted in the Made Ground, or possibly ashy material present. We also identified asbestos fibres in two samples of the Made Ground (from BH1 and BH5 - located in the south and south western area of the site). No elevated concentrations of metals, hydrocarbons, volatile organic compounds or PCBs were reported in any of the soil samples.
Soil Quality Assessment	The results of our Generic Quantitative Risk Assessment indicated that concentrations of PAH compounds (specifically benzo(a)pyrene and benzo[b]fluoranthene) identified in two samples of shallow Made Ground fractionally exceed Generic Acceptance Criteria for residential end use. Concentrations of arsenic recorded in a single shallow Made Ground sample also fractionally exceed residential end use acceptance criteria. The potential risk pathway for these contaminants of concern related to the potential exposure to future residents from dermal contact or ingestion of impacted soils in gardens/landscaped areas.

Continued on the following page

Client: Wheatley PLC	Phase One Environmental Desk Study Report	Report	IN24057 CL 001a
		Date	June 2025
		Page	13

Continued from the previous page

**Conclusions/
Recommendations**

We recommended that a remedial strategy be devised for the site once the final redevelopment scheme is confirmed and details of proposed building / garden locations are finalised. We noted that depending on the final redevelopment scheme for the site, our conceptual site model may require revision

We noted that the remedial strategy was most likely to comprise the incorporation of engineering controls into the proposed scheme including the use of clean cover (soil) systems in landscaped areas and using hydrocarbon impervious barrier pipe for all new water supply pipework.

We also noted that additional areas of contaminant impacted soil may be encountered during redevelopment works. In particular these include areas we were unable to investigate due to the presence of site buildings. We therefore recommended the implementation of a watching brief and that we be contacted in the event of any significant contamination being uncovered during the site demolition works in order to carry out additional verification sampling of underlying soils as required.

Table Fifteen: Previous Intrusive Investigation Review

4 Preliminary Risk Assessment

4.1 Conceptual Site Model

We have used the information presented in the previous sections of this report to create an outline Conceptual Site Model for the site. We have reviewed potential contaminants and their receptors together with any possible pathways that may link them. The resulting pollutant linkages are summarised on the following page.

Glebe Road, Letchworth

SUBADRA

Geotechnical and Environmental Consultants

13 Triangle Business Park, Stoke Mandeville, HP22 5BL

Tel: 01296 739400 Email: consultants@subadra.com

Contaminant	Pathway	Receptor	Viable Pollutant Linkage
Low levels of various PAH compounds identified in shallow Made Ground exceeding the assessment criteria protective of future residents Asbestos fibres detected in two of the shallow Made Ground samples analysed. No other elevated concentrations of potential contaminants identified were identified No groundwater encountered (to 8m depth), so no assessment of groundwater quality possible. We are not aware of any changes in site use since our previous investigation.	Ingestion and dermal contact	Future site residents - occupants of terraced houses with gardens to the rear.	Yes - potential risks posed by low concentrations of PAH compounds, arsenic and asbestos fibres in underlying Made Ground.
	Permeation of volatile contaminants (e.g. hydrocarbons), into drinking water supply service pipes		Unlikely - potential risk posed by low concentration of PAH considered low. Risk easily mitigated with engineering controls (barrier pipe).
	Volatilisation of volatile contaminants (e.g. hydrocarbons) to indoor/outdoor air (either direct from soils or dissolved in groundwater)		No - only low concentrations of PAH compounds identified. No significantly volatile contaminants encountered in underlying soils.
	Off-site migration of contaminants: volatilisation to indoor/outdoor air (vapours from on-site soils or via lateral migration of dissolved compounds)	Commercial / industrial units to the south and west. Residential properties to the east and north.	No - no shallow groundwater encountered (to 8m depth). No impact of underlying chalk encountered, suggesting low concentrations of PAHs have not leached from shallow Made Ground.
	Downward migration of contaminants to groundwater	Chalk - classified as a Principal Aquifer	No - no impact of underlying chalk soils encountered, indicating the low concentrations of PAHs present at shallow depths have not leached out of Made Ground
	Off-site migration of contaminants dissolved in groundwater leading to direct impact of environmental receptors	Inland River on Norton Common - 140m W No surface or groundwater abstractions within 1km of the site. [Site in Zone II of SPZ]	
Potential sources of hazardous ground-gases	Accumulation beneath and within future site building.	Future site residents	No - whilst we have identified potential sources of ground-gases, the likelihood that significant ground-gases are being generated is considered 'very low'. No further monitoring warranted

Glebe Road, Letchworth

5 Conclusions and Recommendations

Site Details	The site is located on Glebe Road in Letchworth Garden City and comprises a single light industrial building, divided into separate commercial units, with a parking area to the rear and single access road from Glebe Road. We understand that Wheatley PLC (our client) proposes to redevelop the site for future residential use, with 9 No. 3 bedroom houses in the location of the existing buildings and garden areas to the north and communal parking to the south.
Review of Environmental Site Sensitivity	The site is located in an area of relatively <i>high</i> environmental sensitivity. Geology maps indicate underlying geology comprises Holywell Nodular Chalk Formation, defined by the Environment Agency as a Principal Aquifer. We anticipate groundwater is present at below 22m deep at the site location. We have not identified surface water/ groundwater abstractions within 1km of the site although the site lies within a Source Protection Zone (Zone II), associated with the chalk Principal Aquifer. The nearest surface water feature is a shallow land drain located 140m to the west.
Review of Site History and Potential Contaminant Sources	The site was first developed as a warehouse building during the 1970s. This comprises the existing site building, now divided into various small light industrial units. During our 2017 site inspection, we did not observe any potentially contaminative activities or signs of contamination at the site. We understand site use has not changed significantly since then. Our previous investigation identified low concentrations of PAHs at shallow depths, likely to reflect either the tarmac component, or possibly ashy material we noted in the Made Ground. We also identified asbestos fibres in two samples of the Made Ground (from boreholes located in the south and south western area of the site). No elevated concentrations of metals, hydrocarbons, volatile organic compounds or PCBs were reported in any of the soil samples analysed. We consider the site is unlikely to be at-risk of impact from concentrations of hazardous ground gases.
Conclusions	The results of our assessment indicate that concentrations of various PAH compounds, arsenic and the presence of asbestos fibres in shallow soils pose a potential risk to future residents via dermal contact and/or ingestion of impacted soils. Whilst these results do not indicate the presence of extensive / severe contamination issues, due to the change of site use to a more sensitive residential land-use, localised remedial works are likely to be required prior to construction and various engineering controls will need to be incorporated into the site redevelopment.
Recommendations	We recommend that a remedial strategy be devised for the site. The remedial strategy will most likely to comprise the incorporation of engineering controls into the proposed scheme including the use of clean cover systems in landscaped areas and using hydrocarbon resistant barrier pipe for all new water supply pipework. We recommend an asbestos survey of all site buildings be undertaken prior to demolition in order to determine/confirm whether asbestos containing materials are present and, if so, to determine a suitable remedial strategy for their removal. We recommend that surveying and any removal is completed by a specialist contractor.

Your attention is drawn to the Notice to Interested Parties included as Attachment One.

ATTACHMENT ONE:
NOTICE TO INTERESTED PARTIES

NOTICE TO INTERESTED PARTIES

The purpose of our work is to provide general information on the environmental And/OR geotechnical conditions existing at the site And related to soil And/OR groundwater. The Client Or others specified the scope of the investigation And the validity of our conclusions is limited by the scope of work specified. We are Not responsible for any such limitations Or omissions.

Where stated in this report, we have used information supplied by third parties. While we have evaluated As far As possible the validity Of this information, we cannot guarantee its accuracy In any way whatsoever.

No investigation technique is capable Of completely identifying all Of the contaminants that might be present In the soil Or groundwater under a site. Where specified In our report, we have examined the ground by constructing a number Of boreholes And/OR trial pits. We recovered samples Of soil And/OR groundwater from available exposures.

The depth And spacing Of our Sampling locations were selected To ensure With a reasonable probability that they would be representative Of the actual conditions across the whole site. However, safety considerations relating To existing site infrastructure may have restricted our ability To investigate all potential contaminant sources. Specifically, we were unable To investigate the soil And groundwater condition immediately adjacent To the underground structures And/OR buried services. These limitations must be borne In mind When considering the conclusions reached In this report.

Soil is intrinsically variable And the spread Of contaminants within the soil is therefore subject To a degree Of non-uniformity. For these reasons no sampling technique can completely eliminate the possibility Of obtaining samples that are Not representative Of the actual conditions. Our sampling techniques are intended To reduce the possibility To an acceptable level, within the limits imposed by the scope of the investigation.

Groundwater levels And soil vapour levels that we report were accurate at the time of the investigation. Groundwater And soil vapour levels are variable. Long term monitoring may be required to ensure that the levels recorded during our investigation are representative of long term And possible 'worst case' conditions. In accepting our recommendations and/or conclusions the Client acknowledges that further, more detailed investigation would allow a more accurate assessment of site conditions to be made and that this would reduce any consequential risk to the Client.

Our investigation was carried out to assess the significance of contamination resulting from use of the site as identified in this report. Unless we have indicated otherwise, no assessment of the potential impact of any other previous uses has been made. No investigation was carried out to determine whether or not any deleterious or hazardous materials (such as asbestos) have been used in the construction of the buildings present on the site. Unless otherwise stated no investigation or assessment has been made of the presence or otherwise of invasive plant species including but not limited to Japanese Knotweed.

Unless specifically stated otherwise, we have not assessed the effect of any proposed future construction activities on existing structures on or near to the site. Nor, unless stated otherwise, have we assessed the likely effect of trees on existing or proposed structures on or near the site.

We do not accept any responsibility for the cost of remedial works or other costs incurred in whatever way whatsoever as a result of any omissions, errors or other shortcomings in this report unless we have been given reasonable opportunity to verify ourselves that such faults exist and we have been given a reasonable opportunity to carry out works to remedy such faults ourselves using the most practicable means available to us. We do not accept liability for any consequential losses incurred by you while either we or others carry out any remedial works we deem necessary.

This report has been prepared for the Client, as specified on the cover page of this report. In accepting our recommendations and/or conclusions the Client accepts that the terms of our appointment were as detailed in the Proposal, or Proposals, that we provided to the Client before being appointed and that these terms supersede any other terms and/or conditions set out in any contracts agreed between ourselves and the Client, regardless of when such terms and/or conditions were agreed to by us and/or signed by us.

Use of, and reliance on, this report by other third parties will be at such third parties own risk, and we do not accept any liability or responsibility to them.

Neither the whole nor any part of this report, or any reference to it, may be included in any published document circular or statement or published in any way without our prior written approval.

This report and its contents, together with any supporting correspondence or other documentation, remain the property of Subadra Consulting Limited until paid for in full. The copyright to this report remains vested in Subadra Consulting Ltd at all times.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.
