

We ask permission to remove the current choir stalls, platforms and chairs and replace them with lighter, more aesthetic, more authentic choir stalls and benches. The current stalls are extremely heavy and cumbersome to move, making the choir area inaccessible for those with mobility issues. These changes would bring immediate transformation to the area of the church in front of the chancel – it would be lighter, more spacious, adaptable and members of the choir would be better grouped, for improved sound, inclusion and connection with the congregation
