

Quotation

Dated: 9th December 2024

Customer Address:

Alison Baigent
Old Trees, Letchworth Lane
Hertfordshire
SG6 3ND

For: Stage 2 Tree Works from 2024 Survey

Item	Description of Work
1	T007: The 14-meter-tall Ash (Fraxinus Excelsior) to undergo a crown reduction of 30% (4-meters) with thinning of any dead / redundant branches to create more air and space in this busy tree.
2	T015: The 12-meter-tall Beech (Fagus Sylvatica) tree with multiple stems to undergo a crown reduction of 20% (2.5-meters) with the removal of dead or redundant stems / branches.
3	T018: The 20-meter-tall Beech (Fagus Sylvatica) tree to undergo a crown reduction by 30% (6-meters) from over the Llama and Goat enclosure at the neighbouring school. These limbs here are growing outward from a weak and decayed union as identified during a climbing inspection. The height will also be lowered on the other main stem help balance and reduce the sail effect. There is a fungus consistent with Perenniporia fraxinea growing at the base of this tree, and Ganoderma sp. seen at around 6 meters at the union of the co-dominant stems. Structural stability to be inspected again in 3 years (A full tomography report is available) Work is requested due to the location of the tree next to the school Llama and Goat enclosure.
