

Indicative plan and layout for the shepherd's hut

As this submission relates to a change-of-use application, detailed elevation drawings are not required at this stage. The information provided below is **indicative only** and is intended to illustrate the approximate form, scale, and appearance of the proposed structure rather than represent a final, fixed design.

The Plankbridge Standard Snug has approximate external dimensions of **12 feet by 6 feet 9.5 inches**, creating an internal floor area of **around 7.57 square metres**. The images included illustrate the *typical* layout and external appearance of this model. The corrugated tin exterior is available in a range of colours, and—as set out throughout the Planning Statement—the final finish will be selected to ensure the building sits sympathetically within its surroundings and minimises visual impact.
