

SPECIFICATION NOTES - REFER ALSO TO THE TENDER DOCUMENT.

1.0 Setting out

1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved beds shall be set out using steel rollers on the ground using two person stakes and a true batten, or with one marker point. The junction between corner and concave corners shall be cut to form a smooth curve following the curve. All setting out shall be checked by the landscape architect and planting works are correct. Failure to do so may result in rejection of the work by the landscape architect and may require amendment at the contractor's expense.

1.2 Planting beds shall be a minimum of 1 metre wide, except where there is insufficient space, due to the constraints of walls and path edges, and their foundations. With narrow beds between walls/fences and path edges, ensure that the bed has space free from existing buildings/planting. If it is not possible to water with concrete, then the landscape contractor shall construct the drainage of landscape without the drainage being any excessive and not be reduced or else the bed can be paved. The width of all beds will be checked by the landscaping contractor and where the width is not as shown, the contractor shall re-calculate them to the specified width at his own expense.

2.0 Ground preparation

2.1 Pre-planting herbicide application-Apply by suitable spraying equipment, an approved translocated systemic herbicide to the manufacturers instructions and to 1987 Control of Pesticides Regulations and 2020 COSHH regulations on all beds except those which are both seed free and are to receive aggressive sheet mulch. Spray immediately if any weeds are present. If no weeds are showing but planting is delayed, spray after one month following cultivation, to allow dormant seed to germinate. All spraying shall be carried out by skilled and qualified operators, using protective clothing in suitable weather (no wind and any damage caused by spray drift from correct usage of sprays) shall be notified at the contractor's own cost. Do not spray near a water body. Repeat as necessary to ensure complete kill and use of all seed material from site.

2.2 Carry out the following works to the existing topsoil on site to ensure it conforms to BS 3882:2015, being free from stones larger than 50mm diameter, coarsest of roots, wire, sticks, and have less than 20% clay. Allow for pre-planting of herbicide as above. Fertilise with 100g per meter square of slow release fertilizer, in accordance with the manufacturer's instructions, for beds less than 2 metres in width. For over 2 metres or machine release soil to a depth of 500mm, ensuring that the subgrade and topsoil are completely broken up and free draining, allowing any compaction. For beds greater than 2 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 500mm except where there are services, or within 10 metres of tree stems or 3 metres of existing hedges. Do not cut areas where roots greater than 50mm diameter are encountered.

2.3 Determine before submitting a tender, the extent of support from the site manager with ground preparation, removal of all of all existing beds to a level 60mm below adjacent grass or paved surfaces, within 400-600mm of edges to ensure bark or wood chip mulches are retained. Where grass is proposed adjacent to planting, then the soil level shall be built with the topsoil spread surface, to receive rain water run off. The landscape contractor is responsible for ensuring that the final product conforms to the specification even where the developer's action: main contractor has failed to supply and agreed topped to the required level. The landscape contractor shall allow for adjustment of levels as specified above, including for regrading subsoil and topsoil. Where beds are existing, ensure that topsoil is graded to the specified levels below pavement & grass surfaces within 400mm of the edges of the bed. This shall be done by the main contractor and/or sub-contractor so that mulch does not get left on in pavements and also to allow surface water to drain from paths or planted areas.

2.4 Spacing ground that is shown to be turfless where there is a paving adjacent to it to 100mm levels of the grass areas shall be graded to finish flush with the finished pavement level at surface water to drain from pavements to sub-soil area. Subsoil of grass areas should therefore never be top of paved areas. Soil levels more than 10 mm below pavement edges will cause mower damage on cutting.

2.5 Imported topsoil (where specified and sanctioned by the employer for making up ground, shall conform to BS 3882: 2015, and be free from roots over 50mm diameter, coarsest of roots, wire and sticks, and have less than 20% clay. Such soil shall be cultivated as set out above. Representative samples shall first be approved by the landscape architect before being supplied to site. No imported soil shall be supplied to site without a written instruction.

3.0 Planning

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, turfing, and trees, and also for construction maintenance requirements.

3.2 No modifications will be accepted without the prior agreement of the landscaping architect. The contractor shall ensure that all plants which have not been specified on the planting plan and schedule, unless by prior written agreement, a substitution has been agreed by the landscaping architect. All plants shall be true to size specified in the schedule of plants and associated notes.
