

SPECIFICATION NOTES - REFER ALSO TO THE TENDER DOCUMENT

1.0 Setting out

1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved beds shall be set out using rods driven into the ground using two pointed stakes and a line between, or with the chain. The junction between corner and concave corners shall be cut to form a smooth tie curve following the curve that all setting out conforms to the plan before calibration and planting works are carried out. Failure to do so may result in rejection of the work by the landscape architect and any expense associated with the contractor's expense.

1.2 Planting beds shall be a minimum of 1 metre wide, except where there is insufficient space due to the constraints of walls and path edges and their foundations. With narrow beds between walls, fences and path edges, ensure that the bed has space free from concrete footings before planting. If the bed is wider with concrete, then the landscape contractor shall contact the building contractor to determine the location of footings and ensure that they are not cut or damaged by the planting work. The width of all beds will be checked by the inspecting landscape architect and where the width is not as shown, the contractor shall re-construct them to the specified width at his own expense.

2.0 Ground preparation

2.1 Preparing herbicide application-Apply by suitable spraying equipment, an approved translocated systemic herbicide to the manufacturers' instructions and to 1987 Control of Pesticides Regulations and 2020 COSHH regulations on all beds except those which are both shaded and are to receive aggressive sheet mulch. Spray immediately if any weeds are present. If the weeds are showing but planting is delayed, spray after one month following cultivation, to allow dormant seeds to germinate. All spraying shall be carried out by skilled and qualified operatives, using protective clothing in suitable weather and no wind and any damage caused by spray drift from recent usage or rainfall, shall be notified at the contractor's own cost. Do not spray near a water body. Repeat as necessary to ensure complete kill and use of all weed resistant ton able.

2.2 Carry out the following works to the existing topsoil on site to ensure it conforms to BS 3882:2015, being less than 100mm deep, 100mm wide, 100mm high, 100mm thick, and have less than 20% clay. Allow for pre-planting with 100g per meter square of slow release fertiliser, in accordance with the manufacturer's instructions. For beds less than 2 metres in width, lay over thoroughly or machine release soil to a depth of 400mm, ensuring that the subgrade and topsoil are completely broken up and free draining, relaying any compaction. For beds greater than 2 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 400mm, ensuring that the subgrade and topsoil are completely broken up and free draining. Repeat as necessary to ensure complete kill and use of all weed resistant ton able.

2.3. Determine before submitting a tender, the extent of support from the site manager with ground preparation, ensure that all of the following beds are graded to a level 65mm below adjacent grass or paved surfaces, within 400mm of edges to ensure bark or wood chip mulches are retained. Where grass is proposed adjacent to paving, then the soil level shall be built with the support paved surface, to receive rain water run off. The landscape contractor is responsible for ensuring that the final product conforms to the specification even where the developer's site manager contractor has failed to supply and spread topsoil to the required level. The landscape contractor shall allow for adjustment of levels as specified above, including for regarding subsoil and topsoil. Where beds are existing, ensure that topsoil is graded to the specified levels below pavement & grass surfaces within 400mm of the edge of the bed. That this shall apply to the mulch and bark or wood chip mulch so that mulch does not spill out on to pavements and also to allow surface water to drain from paths or paved areas.

2.4 Spreading ground that is shown to be turfless where there is paving adjacent to it to topsoil levels of the grass areas shall be graded to finish flush with the finished pavement level or after surface water to drain from pavements to sub areas. Sub of grass areas should therefore never be part of paved areas. Soil levels more than 10 mm below pavement edges will cause minor damage on cutting.

2.5 Imported topsoil (where specified and sanctioned by the engineer for making up ground, shall conform to BS 3882: 2015, and be free from rocks over 50mm diameter, and have less than 20% clay. Such soil shall be cultivated as set out above. Representative samples shall first be approved by the landscape architect before being supplied to site. No imported soil shall be supplied to site without a written instruction.

3.0 Planting

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, turfing, and trees, and also for contractual maintenance requirements.

3.2 No substitutions will be accepted without the prior agreement of the inspecting landscape architect. The contractor shall replace or cut at the site any plants which, species or variety of plant which has not been specified on the planting plan and schedule, unless by prior written agreement. A substitution has been agreed by the inspecting landscape architect. All plants shall be true to size specified in the schedule of plants and associated notes.
