

SPECIFICATION NOTES - REFER ALSO TO THE TRIGGER DOCUMENT.

1.0 Setting out

1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved beds shall be set out using radii defined on the ground using two pointed stakes and a true batten, or with one marker point. The junction between corner and concave corners shall be cut to form a smooth radius flowing the. Check that all setting out conforms to the plan before calculation and planting works are carried out. Failure to do so may result in rejection of the work by the landscape architect and may require amendment at the contractor's expense.

1.2 All planting beds shall be a minimum of 1 metre wide, except where there is insufficient space, due to the constraints of walls and path edges, and their boundaries with narrow beds between walls, fences and path edges, ensure that the bed has space free from concrete, existing buildings, planting, if it is water with concrete, then the landscape architect shall contact the site manager or landscape architect to determine if bedding are excessive and can be reduced or else, the bed can be paved. The width of all beds will be checked by the inspecting landscape architect and where the width is not as shown, the contractor shall re-calculate them to the specified width at his own expense.

2.0 Ground preparation

2.1 Pre-planting herbicide application-Apply by suitable spraying appliance, an approved translocated systemic herbicide to the manufacturers' instructions and to 1987 Control of Pesticides Regulations and 2020 COSHH regulations on all beds except those areas on both sides free and are to receive aggressive street mulch. Spray immediately if any weeds are present. If no weeds are showing but planting is delayed, spray after one month following cultivation, to allow dormant seed to germinate. All spraying shall be carried out by skilled and qualified contractors, using protective clothing in suitable weather (no wind and no spray damage caused by spray drift). From recent usage or storage, shall be notified at the contractor's own cost. Do not spray near a water body. Repeat as necessary to ensure complete kill and use of all weed resistant from sale.

2.2 Carry out the following works to the existing topsoil on site to ensure it conforms to BS 3882:2015, being free from larger than 50mm diameter, concrete, all roots, wire, brick, and have less than 20% clay. Allow for pre-planting of hardwearing above. Fertilise with 100g per meter square of slow release fertiliser, in accordance with the manufacturer's instructions. For beds less than 5 metres in width, lay over thoroughly or machine cultivate to a depth of 400mm, ensuring that the subgrade and topsoil are completely broken up and free draining, relaying any compaction. For beds greater than 5 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 500mm/centres where there are services, or within 10 metres of the tree stems or 3 metres of existing hedges. Do not cut areas where roots greater than 50mm diameter are encountered.

2.3 Determine before submitting a tender, the extent of support from the site manager with ground preparation: removal of all planting beds to grade to a level 60mm below adjacent grass or paved surfaces, within 600mm of edges to ensure bark or wood chip mulches are retained. Where grass is proposed adjacent to paving, then the soil level shall be built with the approved paved surface, to ensure that water runs off the finished product conforms to the specification over where the developer's action: main contractor has failed to supply and agreed topped to the reserved level. The landscape architect shall allow for equipment levels as specified above, including for regarding subsoil and topsoil. Where beds are rising, ensure that topsoil is graded to the specified levels below pavement & grass surfaces within 60mm of the edges of the bed. That which is greater to the north and bark or wood chip mulch so that mulch does not get left on the pavement and also to allow surface water to drain from paths or planted areas.

2.4 Sloping ground that is shown to be turfless where there is paving adjacent to a topsoil level of the grass areas shall be graded to finish flush with the finished pavement level at surface water to drain from pavements to subsoil areas. Subsoil grass areas should therefore never be topsoiled or paved areas. Soil levels more than 10 mm below pavement edges will cause mower damage on cutting.

2.5 Imported topsoil (where specified and sanctioned by the employer) for making up ground, shall conform to BS 3882: 2015, and be free from roots over 50mm diameter, concrete, all roots, wire, brick, and have less than 20% clay. Such soil shall be cultivated as set out above. Representative samples shall first be approved by the landscape architect before being supplied to site. No imported soil shall be supplied to site without a written instruction.

3.0 Planning

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the order document for the preparation of existing topsoil and required depths for planting, turfing, and trees, and also for contractual maintenance requirements.

3.2 No installation will be accepted without the prior agreement of the inspecting landscape architect. The contractor shall replace or cut at the two ends any stock size, species or variety of plant which has not been specified on the planting plan and schedule, unless it has been written agreement. A substitution has been agreed by the inspecting landscape architect. All plants shall be true to size specified in the schedule of plants and associated notes.
