

Garage Door Specification

Overall Design

(to be constructed by a local carpenter)

The Garage doors will be constructed from vertical timber boards as seen in the picture above. This image is from Nobels Cottage (our next door neighbour) and is also the exact same design as on Awldyke Cottage, next door to that. Ours will look identical to this, painted black, featuring 4 identical large black hinges. Overall the size will be 2.5m wide x 2.1m high approx. The doors will have a central lock and will be manually operated.
