EXECUTIVE SUMMARY

Site Name & Address:	Area D at Temple Dinsley, Preston, Hitchin, Hertfordshire, SG4 7RT
Client:	The Door PHC Ltd
Local Planning Authority:	North Hertfordshire District Council
Historical Site Use:	Agricultural land and agricultural buildings and activities.
Present Site Use:	Open field for grazing cattle.
Proposed Site Use:	Retention of the majority of the site as open parkland. Construction of an access road from the entrance off School Lane to the existing off-site pump house (Area F). New parking areas are to be constructed in the north-west site corner comprising covered shared parking with a green roof.
Date of most recent investigation:	Wednesday 15 th May 2024 – site walkover survey
Objectives:	▪ To develop an understanding of the site's history and environmental context; ▪ To determine the potential existence of any significant pollutant linkages which might represent a potential risk to construction workers, future occupants of the site or controlled waters; and ▪ To undertake a Stage I Preliminary 'Contaminated Land' investigation in accordance with LCRM and guidance contained in the NHBC Publication 66: 2008.
	▪ Our desk-based research and walkover survey identified the following potential sources of contamination: ○ On-site: Piggery, ponds, unspecified pits, historic agricultural buildings and activities, possible historic chalk mining and Made Ground associated with historic demolished buildings and identified on the site walkover; and ○ Off-site (within 250m): Pumping station (disused), mast, electricity substations, sewage tanks, works (disused), unspecified tank, silo, ponds, infilled ponds, covered reservoir, Made Ground associated with demolished buildings, unspecified pits, infilled pits and waste exemption.
Pathway:	▪ Based on the BGS online mapping, the site is underlain by superficial deposits of Till (diamicton) and Clay with Flints Formation (clay, silt, sand, and gravel). These are both underlain by bedrock geology of Lewes Nodular Chalk Formation, Seaford Chalk Formation (chalk); ▪ Surface soils have an intermediate leaching class with an infiltration rate of 40-70%; ▪ There are no Water Network (OS MasterMap) records within 250m of the site and 1 no. surface water feature within 250m of the site; ▪ The site is situated within Flood Zone 1; and ▪ The risk of surface water flooding on-site and within 50m is the 1 in 30 year, 0.3m-1.0m event. The risk of groundwater flooding on-site and within 50m of the site is low.
Receptor:	▪ The superficial deposits are classified as either a Secondary Undifferentiated Aquifer or Unproductive Aquifer and the underlying bedrock geology is classified as a Principal Aquifer; ▪ We consider the potential on-site sources of contamination to represent low risk to human health and low risk to groundwater; and

- The potential risk from ground gas migrating onto the site, and affecting the proposed development is low.

Recommendations:

- It is recommended that a 'Discovery Strategy/ Watching Brief' is maintained on site, particularly during the groundwork stage. During any ground works an appraisal of the exposed soils should be made by a competent person, this as an example could be the site manager. If any material is noted to show visual and/or olfactory signs of contamination it should be stockpiled separately and tested prior to its appropriate removal off-site or re-use. If soils suspected of being contaminated are encountered, it is recommended that a contaminated land specialist is consulted; and
- No Asbestos Containing Materials (ACMs) were identified during the walkover and proposals do not seek to convert or demolish any on-site buildings. However, should development plans change, due to the age of the piggery building there is a possibility that ACMs could be present within the make-up of the structure. If the piggery is to be modified in the future we would recommend undertaking a HSG264 Pre-Demolition/ Major refurbishment asbestos survey on the existing buildings. All identified ACMs should then be removed by a suitably experienced contractor, prior to the conversion or demolition of the building.

1 INTRODUCTION

1.1 Brief

1.1.1 J P Chick & Partners Ltd were appointed by Scabal Ltd, on behalf of our mutual client, The Door PHC Ltd, to undertake a Stage I/ Tier I Geo-Environmental Desk Study Report for 'Temple Dinsley, Preston, Hitchin, Hertfordshire, SG4 7RT' (hereafter referred to as 'the site').

1.1.2 The investigation was carried out broadly in accordance with the following guidance:

- Environment Agency (April 2021): *Land Contamination Risk Management (LCRM)*;
- Department for Environment, Food and Rural Affairs (2012): *Contaminated Land Statutory Guidance, Environmental Protection Act 1990: Part IIA*;
- Ministry of Housing, Communities and Local Government. (July 2021): *National Planning and Policy Framework*; and
- BS10175:2011 +A2:2017 "Investigation of Potentially Contaminated Sites – Code of Practice".

1.1.3 This report shall be for the private and confidential use of The Door PHC Ltd for whom it was undertaken. It should not be reproduced in whole or in part or relied upon by a third party for any use without the express written authority of J P Chick & Partners Ltd.

1.1.4 In producing this report, we have exercised all the reasonable skill, care, and diligence to be expected of an appropriately qualified and competent consultant, experienced in carrying out equivalent services for developments of a similar size, value, purpose, scope, and complexity.

1.2 Scope

1.2.1 The main elements of the investigation were as follows:

- The review of historical and regulatory information relating to the site to gain an understanding of the site's history, local environment, and potential ground conditions;
- Undertake a walkover survey of the site and surrounding area to identify the presence and types of commercial activities within the locality and seek evidence of potential sources of on or off-site contamination;
- The formulation of a "Conceptual Site Model" to explore and evaluate the existence and potential impact of any plausible pollutant linkages;
- To utilise the resulting information to undertake a 'Stage I' human and environmental risk assessment; and
- If appropriate, make recommendations on the extent of any intrusive investigations which may be required to fully establish the condition of the site.

1.3 Sources of Information

1.3.1 As part of the desk-based research, J P Chick & Partners Ltd consulted the following sources of information:

- GroundSure EnviroInsight Report – produced by GroundSure Ltd;
- British Geological Survey (BGS) mapping and online referencing;

- Environment Agency landfill mapping – online;
- BR 211 Radon: Guidance on Protective Measures for New Dwellings, 2007 Edition;
- Magic Map Website – magic.defra.gov.uk;
- North Hertfordshire District Council Planning Portal; and
- Google Earth (aerial photography).

1.4 Development Proposal

1.4.1 We understand that the development proposal for Area D comprises the retention of the majority of the site as open parkland. An access road will be constructed crossing the site from the entrance off School Lane leading north-east to the existing off-site pump house building in Area F. New parking areas are to be constructed in the north-west site corner comprising of covered shared parking with a green roof. An extract of the architect's layout plan is shown in **Figure 1** below and the full version is included within **Appendix A**.

Figure 1: Architect's Layout Plan (extract)

2 DESK STUDY

2.1 Location

Table 1: Site Location

Location	Area D at Temple Dinsley, Preston, Hitchin, Hertfordshire, SG4 7RT
Grid Reference	518382 224611
Area	12.68ha
Access	Access is gained via a private driveway off School Lane to the south-west of the site.
Topography	The majority of the site is relatively flat across the southern and eastern sections. Ground levels slope downwards to the north-west towards the pond located off-site in Area B.

2.2 Site Description (Walkover Survey)

2.2.1 The site walkover was conducted on the 15th May 2024 by Daniel Fowles and Katherine Carpenter on behalf of J P Chick & Partners Ltd. An extract of the site location plan is shown in **Figure 2** below and the full version is included within **Appendix B**.

Figure 2: Site Location Plan (extract)

2.2.2 Site photographs taken during the site walkover are included within **Appendix C**.

2.2.3 Access was gained via a metal gate off School Lane from the south-west of the site, approximately 0.20km south-east of The Red Lion Public House, Preston. The site is bounded by the Summerhouse Plantation to the north and a sports field and tennis courts to the north-east. Preston Reservoir is located to the east across St Albans Highway running north-south alongside the eastern boundary. School Lane bounds the site to the south and west with residential dwellings and woodland located to the south. Buildings and gardens associated with the Temple Dinsley site are immediately west of Area D and the village of Preston, including residential dwellings, a nursery, primary school and public house, is located further to the west.

2.2.4 The site boundaries are demarcated by metal fencing to the north, lined with mature trees. Wooden and wooden posted with wire fencing lines the eastern, southern and south-western boundaries with intermixed mature trees, hedgerows and dense shrubs along the boundary. The western boundary is marked by wooden fencing adjacent to the access track forming the main site access.

2.2.5 The site itself comprises a large grass covered field currently used for grazing cattle. Mature trees and hedgerows line the site boundaries with small, wooded areas noted on the southern and western boundaries. Three shallow pits, including a likely dry pond, are dotted along the southern boundary close to School Lane. The derelict pump station [10] and large wooden shed [11] used as a cattle shed are within the centre of the site (Area F) as shown in Figure 1. Area F is covered within a separate report. A building noted as the piggery [8] is located in the north-west section of the site, comprising a single-storey, dilapidated brick building with gable clay tile roof and concrete floor. Cracks were present in the north-west walls of the structure. During the site walkover Made Ground of concrete, broken brick, and disused drainage features were noted in the area north-east and south-east of the piggery.

2.3 Site History

2.3.1 The site history which was determined by our review of the GroundSure historical mapping is presented in **Table 2** below. The full GroundSure report is provided within **Appendix D**.

Table 2: Historic Mapping

Map Edition (Date, Scale)	The Site	Surrounding Area
1881 (1:2,500)	The site comprises an agricultural field in the south-west and part of an agricultural field in the south-east. A pond and pit are located adjacent to the southern site boundary. A cluster of unnamed buildings occupy the centre of the site with ponds situated approximately 0-10m north, east and south and 80m west. A track	Buildings are 150m east. A cluster of buildings are 5-50m south. Kiln Wood is 5->250m south, ponds are located within the woodland 30m and 90m south. Allotment gardens are 30-250m south-west. A school and the Red Lion Public House are 120m and 230m west respectively within the village of Preston. Further buildings associated with the village of Preston are 20->250m south-west, west and north-west. Ponds are 5m and

Map Edition (Date, Scale)	The Site	Surrounding Area
	links from the south of the building complex leading south-west to the unnamed road bordering the southern site boundary. A tree lined field occupies the northern section of the site forming part of the Temple Dinsley estate.	20m west and buildings associated with Temple Dinsley are 50-140m west and north-west. A swimming pool is 90m west and glasshouses are 105-120m west. A complex of buildings noted as Preston Cottage are 200-250m north.
1897 1898 (1:2,500) (1:10,560)	The pond and pit adjacent to the southern boundary are no longer marked. A pond is now marked in the south-east corner.	The buildings 150m east are now noted as The Lodge and a pump is adjacent. Buildings within the village of Preston have been removed and new ones constructed. Preston Cottage is now noted as The Cottage, a pump is 250m north-west and additional buildings have been constructed and some removed at the complex.
1922 1922* 1924 (1:2,500) (1:10,560)	The complex of buildings in the centre of the site, aside from the later named piggery, and the pond to the north have been removed. The pond on the western boundary has been removed. A pit is noted on the southern boundary. An unnamed building and pumping station have been constructed in the southern half of the site, linking to the access track leading south-west (these buildings are part of Area F and covered within a separate report).	A pit is 140-180m north and sewage tanks are 190m north. The Summerhouse Plantation has replaced an agricultural field 0-200m north-east. The pump at The Lodge has been removed and a building is 145m east. A complex of buildings 40-150m south-east have been constructed noted as Home Farm. Buildings have been constructed within Kiln Wood 30-40m and 160m south and a pond is 110m south. The buildings 15-20m south-west have been removed and replaced by Crunnells Green House 70m south-west. The pond 55m south-west has been removed and buildings have been constructed 150-190m south-west. The glasshouses at Temple Dinsley have been removed and extensions have been added to the main building. Additional buildings have been constructed throughout the village of Preston 90-250m west and north-west. A Football and Cricket Ground are 240m north-west. Glasshouses are present 240m north-west at The Cottage. Additional buildings have been constructed at The Cottage 220-250m north-west.
1946-1947 1947-1949 (1:10,560)	No significant change has occurred.	No significant change has occurred.

Map Edition (Date, Scale)	The Site	Surrounding Area
1951* 1959* (1:10,560)	No significant change has occurred.	The sewage tanks are no longer marked. Buildings at Home Farm have been removed 50-140m south-east and new ones constructed. Additional buildings have been constructed in the village of Preston 90-250m west.
1971 1972-1973 1976* 1975-1980 1979* 1980-1981* (1:2,500) (1:10,560) (1:10,000)	The pond in the south-east corner is no longer marked. The track in the western section and field boundary in the north are no longer marked. The pumping station (within Area F) is now noted as disused.	The pit 140-180m north has been removed and works (disused) are noted 200m north. Tennis Courts are 5m east and a playing field is 0-100m east. A covered reservoir is 50m east. Home Farm in the south-east has been renamed Minsden Farm, new buildings have been constructed at the complex and a silo is 105m south-east. The road 5m south-west is now named School Lane. Additional buildings have been constructed in the village of Preston 90-250m west. Temple Dinsley is now noted as Princess Helena College, additional buildings have been constructed within the complex 50-120m north-west. A tennis court is 230m north-west. The Cottage is now noted as Dower House, additional buildings have been constructed and removed from the complex.
1986* 1991* 1992-1993 1993 (1:2,500) (1:10,000)	No significant change has occurred.	No significant change has occurred.
2001 2003 (1:1,250) (1:10,000)	No significant change has occurred.	The Works (disused) is no longer marked.
2010 (1:10,000)	No significant change has occurred.	No significant change has occurred.
2024 (1:10,000)	No significant change has occurred.	No significant change has occurred.

*Incomplete mapping

2.4 Geology

- 2.4.1 To determine the nature of the underlying geology, we have consulted the 1:50,000 scale geological maps compiled by British Geological Survey (BGS). Based on these maps, the site is likely to be underlain by superficial deposits of Till (diamicton) and Clay with Flints Formation (clay, silt, sand, and gravel). These are both underlain by bedrock geology of Lewes Nodular Chalk Formation and Seaford Chalk Formation (chalk).
- 2.4.2 Further superficial deposits of Head (clay, silt, sand and gravel) outcrops 38m north and 202m north-east, Clay with Flints Formation (diamicton) outcrop 91m north and 151m north-west, and Dry Valley Deposits (clay, silt, sand and gravel) outcrop 111m north.
- 2.4.3 Further bedrock geology of the Top Rock Bed (chalk) is recorded 56m north-west, Lewes Nodular Chalk Formation and Seaford Chalk Formation (chalk) is recorded 90m north and 130m north-west, Chalk Rock Member (chalk) is 101m north and Holywell Nodular Chalk Formation and New Pit Chalk Formation (chalk) is 120m.
- 2.4.4 Artificial deposits of Worked Ground are 161m north noted as a void.
- 2.4.5 The likelihood of potential geological hazards associated with natural ground subsidence is summarised in **Table 3** below. Unless otherwise stated, the hazard rating is for the entire site.

Table 3: Natural Ground Subsidence Events

Geological Hazard	Hazard Rating
Shrink-swell clays	Low
Running sands	Negligible (northern half)
	Very low (southern half)
Compressible deposits	Negligible
Collapsible deposits	Very low
Landslides	Very low
Ground dissolution of soluble rocks	Very low (south)
	Low (north-west corner)
	Moderate (north-west corner)

2.5 Hydrogeology and Hydrology

- 2.5.1 The hydrogeological designations and classifications for superficial deposits and bedrock geology, both underlying the site and within 250m, were obtained with reference to the Environment Agency website and GroundSure Report and are outlined in **Table 4** below.

Table 4: Hydrogeology

Geological Strata	Distance (m)	Designation	Groundwater Vulnerability
Superficial Deposits	On-site (southern half)	Secondary Undifferentiated Aquifer – mixed flow type with high to very low permeability	Medium

Geological Strata	Distance (m)	Designation	Groundwater Vulnerability
	On-site (northern half)	Unproductive Aquifer – mixed flow type with moderate to low permeability	Unproductive
	54m north-west	Secondary Undifferentiated Aquifer	n/a
	92m north	Unproductive Aquifer	n/a
	114m north	Secondary Undifferentiated Aquifer	n/a
	169m north-west	Unproductive Aquifer	n/a
	192m north-east	Secondary Undifferentiated Aquifer	n/a
Bedrock Geology	On-site	Principal Aquifer – fracture flow type with very high permeability	Low
	90m north	Principal Aquifer	Low

2.5.2 In terms of groundwater vulnerability, the Environment Agency divides significant groundwater catchments into three Source Protection Zones (SPZ's) based on the potential risk associated with the migration of possible contaminants. In this case, the site is located within SPZ 3 (total catchment).

2.5.3 The surface soil leaching class for the site is intermediate with an infiltration rate of 40-70%.

2.5.4 In respect of the local hydrology there are no Water Network (OS MasterMap) records within 250m of the site and 1 no. surface water feature within 250m of the site, however no further detail is provided.

2.5.5 The local hydrology forms part of the River Purwell catchment (water body ID GB105033037690) and River Mimram (Whitwell to Codicote Bottom) catchment (water body ID GB106038033460), both of which have an overall and ecological rating of 'moderate' and a chemical rating of 'fail'. Groundwater on-site is associated with Upper Bedford Ouse Chalk (water body ID GB40601G603000) which has an overall and chemical rating of 'poor'.

2.5.6 The site is situated within Flood Zone 1 and has not been subject to a historic flood event.

2.5.7 The highest risk of surface water flooding on-site and within 50m is the 1 in 30 year, 0.3m-1.0m event. The risk of groundwater flooding on-site and within 50m of the site is low.

2.5.8 Information on groundwater, surface water and potable abstractions within 250m of the site are outlined in **Table 5** below.

Table 5: Abstractions

Abstraction	Distance (m)	Related to
Groundwater	n/a	None recorded within 250m of the site.
Surface Water		
Potable Water		

2.6 Industrial Land Use, Waste and Landfill

2.6.1 Records for industrial land uses, waste, and landfills on-site and within 250m of the site are presented below in **Table 6**.

Table 6: Potentially Contaminative Sources

Source	Distance (m)	Related to
Industrial Land Use		
Current Industrial Land Use	On-site	Pumping station (disused).
	22m east	Mast (telecommunication).
	88m south-east	Electricity substation.
	221m north	Works (disused).
	245m north-west	Electricity substation.
Historical Industrial Land Use	On-site	Unspecified pit (7 records).
	On-site	Pumping Station (5 records).
	16-47m south-east	Unspecified pit (2 records).
	36m south	Unspecified pit.
	147-148m north	Unspecified pit (6 records).
	204-205m north	Sewage tanks (5 records).
	213m south-west and 216m north	Unspecified tank (3 records).
Historical Tanks	116m and 217m south-east	Unspecified tank (2 records).
	198m north	Sewage tanks.

Source	Distance (m)	Related to
	212-215m north	Unspecified tank (2 records).
Historical Energy Features	82m south-east	Electricity substation.
	243m north-west	Electricity substation.
Historical Petrol Stations	n/a	None recorded within 250m of the site.
Historical Garages		
Waste and Landfill		
Active or Recent Landfill	n/a	None recorded within 250m of the site.
Historical Landfills		
Historical Waste Sites		
Licenced Waste Sites		
Waste Exemptions	51m north-west	Site: Preston, Hitchin, SG4 7RT (2 records). Category: disposing of waste exemption. Description: Burning waste in the open.

2.7 Licenced Activities, Permits and Incidents

2.7.1 Records for licenced activities, permits and incidents on-site and within 250m of the site are presented below in **Table 7**.

Table 7: Licenced Activities, Permits and Incidents

Activity	Distance (m)	Related to
Historical Licenced Industrial Activities (IPC)	n/a	None recorded within 250m of the site.
Licensed Industrial Activities (Part A(1))		
Licensed Pollutant Release (Part A(2)/B)		
Radioactive Substance Authorisations		
Licensed Discharges to Controlled Waters	234m south-west	Address: Hill Farm Cottage, Preston Effluent: Sewage, final/treated effluent – not water company. Effective Date: 21/06/1974
Pollutant Release to Surface Waters (Red List)	n/a	None recorded within 250m of the site.
Pollution Inventory Substances		
Pollution Inventory Waste Transfers		
List 1/ List 2 Dangerous Substances		
Pollution Incidents		

2.8 Radon

2.8.1 The site is in a lower probability Radon affected area. Less than 1% of homes are above the action level for Radon, no radon protection measures are necessary in the construction of new buildings or residential dwellings.

2.9 Mineral Workings and Potentially Infilled Land

2.9.1 Records for mineral workings and potentially infilled land on-site and within 250m of the site are presented below in **Table 8**.

Table 8: Mineral Working and Potentially Infilled Land

Feature	Distance (m)	Related to
Natural Cavities	n/a	None recorded within 250m of the site.
BritPits		
Surface Ground Workings	On-site	Unspecified pit (7 records).
	6-18m north-west	Ponds (9 records).
	11m south	Pond.
	16-47m south-east	Unspecified pit (2 records).
	36m south	Unspecified pit.
	66m east	Covered Reservoir.
	73m south	Pond.
	90m north-west	Pond (2 records).
	147-148m north	Unspecified pit (6 records).
	204-206m north	Sewage tanks (5 records).
Underground Workings	n/a	None recorded within 250m of the site.
Historical Mineral Planning Areas		
Non-coal Mining	On-site	Commodity: chalk. Class: A Likelihood: underground mine workings are uncommon, although the geology is similar to that worked elsewhere.
	90m north	Commodity: chalk. Class: A Likelihood: underground mine workings are uncommon, although the geology is similar to that worked elsewhere.
Mining Cavities	n/a	None recorded within 250m of the site.

Feature	Distance (m)	Related to
Johnson Poole and Bloomer Mining Areas		
Coal Mining		
Brine Areas		
Gypsum Areas		
Tin Mining		
Clay Mining		

2.10 Railway Infrastructure and Projects

2.10.1 Records for railway infrastructure and projects on-site and within 250m of the site are presented in **Table 9** below.

Table 9: Railway Infrastructure and Projects

Feature	Distance (m)	Related to
Underground Railways (London)	n/a	None recorded within 250m of the site.
Underground Railways (Non-London)		
Railway Tunnels		
Historical Railway and Tunnel Features		
Active Railways		

2.11 Designations

2.11.1 Records for environmental, cultural, and agricultural designations on-site and within 250m of the site are presented below in **Table 10**.

Table 10: Environmental, Cultural and Agricultural Designations

Designations	Distance (m)	Related to
Environmental	On-site	Site of Special Scientific Interest (SSSI) Impact Risk Zone (3 records).
	On-site	Great Ouse Nitrate Vulnerable Zone (NVZ) (surface water).
	On-site	LEE NVZ (surface water).
	On-site	Anglian Chalk NVZ (groundwater).
	On-site	Luton Chalk NVZ (groundwater).
	On-site	London Green Belt – North Hertfordshire.
	1m south-east	Ancient Replanted Woodland.
Visual and Cultural	On-site	Icehouse Among Chestnut Trees at Princess Helena Cottage, Temple Dinsley – Grade II Listed Building.

Designations	Distance (m)	Related to
	On-site	The Piggery at princess Helena Cottage, Temple Dinsley – Grade II Listed Building.
	15m west	Park Wall facing School Lane and 2 pairs of Gatepiers and Flanking Walls at main gate to Princess Helena Cottage – Grade II Listed Building.
	25m south	Kiln Wood Cottage and linked outhouse to south-east – Grade II Listed Building.
	80m south-east	Ladygrove Stud Farm including dairy cottage, Ladygrove Lodge and Kiln Wood Lodge – Grade II Listed Building.
	94m north-west	Princess Helena Cottage, Temple Dinsley, with terraces, steps, walls, railings, gates, pergolas, and garden buildings – Grade II Listed Building.
	160m south-west	Crunnells Green Cottage – Grade II Listed Building.
	196m west	The Red Lion Public House – Grade II Listed Building.
	227m north-west	Barn on roadside now garage to Spindle Cottage – Grade II Listed Building.
	229m south-west	Reeves Cottage – Grade II Listed Building.
	229m north-west	Spindle Cottage – Grade II Listed Building.
	233m west	Well, wellhead gear and wellhouse – Grade II Listed Building.
	235m west	K6 Telephone Kiosk – Grade II Listed Building.
	238m west	Laburnam Lodge – Grade II Listed Building.
	248m north-west	The Chequers with wall and outhouses fronting Chequer Lane – Grade II Listed Building.
Agricultural	On-site	Grade 3: good to moderate quality agricultural land.

2.12 Planning Portal

2.12.1 A search was made on North Hertfordshire District Council's planning portal. This was done to further explore the evolution of the site and any available information related to nearby sites. The search identified 15 no. applications relating to the SG4 7RT postcode. No contamination issues were identified relating to the site.

3 CONCEPTUAL SITE MODEL

3.1 Introduction

3.1.1 The “conceptual site model” is a simplified representation of the ground conditions that exist on-site, which is subsequently used to assess the potential risk to human and environmental receptors. According to the Land Contamination Risk Management (LCRM) guidance, “A *conceptual site model is a representation of the characteristics of the site. It shows the possible relationships between contaminants, pathways, and receptors*”.

3.1.2 Although the model is formulated during the initial phase of the investigation it is subject to change, as new information comes to light, and our understanding of the site improves. It is central to the risk assessment process and therefore must consider all potential relationships and interactions.

3.1.3 There are four key aspects to the model, these are:

Table 11: Conceptual Site Model Key Aspects

Source(s)	These can include current or historic activities taking place either on or adjacent to the site, which may have had a negative impact on surface or sub-surface soils, or groundwater.
Pathway(s)	This is the route by which contaminants travel / migrate between their source and any available receptor.
Receptor(s)	These are varied and can include human or non-human organisms and eco-systems; controlled waters such as groundwater or surface water bodies; and structures or individual construction materials.
Pollutant linkage(s)	These exist where all three of the previous elements are present, indicating that the “link” between an identified source and a potential receptor via a pathway.

3.2 Potential Sources of Contamination

3.2.1 Records for potential sources of contamination on-site and within 250m of the site are presented below in **Table 12**.

Table 12: Summary of Potential Sources of Contamination

On-Site	Description
Current Land Use and Activities	Piggery, ponds, unspecified pits and Made Ground associated with historic demolished buildings and identified on the site walkover.
Historical Land Use and Activities	Agricultural buildings and activities and possible historic chalk mining.
Off-Site	Description
Current Land Use and Activities	Pumping station (disused), mast, electricity substations, works (disused), infilled ponds, Made Ground associated with demolished buildings, unspecified pit and infilled pits.

Historical Land Use and Activities	Pumping station, unspecified pits, sewage tanks, works, unspecified tank, silo, electricity substations, possible historic chalk mining, ponds, covered reservoir and waste exemption.
------------------------------------	--

3.3 Potential Contaminant Pathways

Table 13: Identified Potential Pathways

Pathway
Inhalation - Potential inhalation of contaminants in dust/ fibrous form.
Ingestion - Future site users could ingest small quantities of soil derived dust originating from soft landscaped areas or disturbed ground.
Dermal absorption - Contaminants present within surface or sub-surface soils/ fill material can enter the human body through the skin or via open wounds.
Buried services - If elevated levels of petroleum hydrocarbons are present within surface/ subsurface soils, then 'plastic' drinking water pipe can become compromised.
Migration/ Leaching - Potential for migration of contaminants through soil/ groundwater.

3.4 Potential Contaminant Receptors

Table 14: Identified Potential Receptors

Receptor
Future site users - Future site users could be affected by contaminants in the soil, entering the mains water system or ground gas entering the building.
Construction workers - Workers involved with future site clearance and preparatory work will be exposed to contaminants present within on-site soil, should they exist.
Buildings and Infrastructure - Modern construction techniques can cause accumulations of gas, if gas is able to accumulate within new, or converted, buildings there is potential for an explosion.
Buried services - Plastic drinking water pipes are vulnerable to petroleum hydrocarbons.
On-site soil - Particularly close to the surface, may have been impacted by historic activities.

3.5 Plausible Pollutant Linkages

- 3.5.1 Using the 'source – pathway – receptor' tables above, potential pollutant linkages are identified. An assessment of the likely significance of each linkage is then considered, which would include; the possible extent and mobility of the source; the sensitivity of the receptor and the type of migration/ exposure pathways.
- 3.5.2 An assessment of the probability and the magnitude of potential risk is presented below to give a valuation of each potential pollutant linkage identified and their significance.
- 3.5.3 This assessment is undertaken based on the current proposal for the site at the time of issuing this report, which comprises the retention of the majority of the site as open parkland. An access road will be constructed crossing the site from the entrance off School Lane leading north-east to the existing off-site pump house (Area F). New parking areas are to be constructed in the north-west site corner comprising covered shared parking with a green roof.

3.5.4 This qualitative risk assessment has been undertaken in accordance with CIRIA C552: Contaminated Land Risk Assessment, A Guide to Good Practice (Rudland et al., 2001).

3.5.5 The level of potential risk ascribed to each linkage is based on the following criteria:

Table 15: Risk Classification

Risk Classification	Description
Very high risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard at the site without appropriate remedial action.
High risk	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remedial action.
Moderate risk	It is possible that without appropriate remedial action harm could arise to a designated receptor, but it is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild.
Low risk	It is possible that harm could arise to a designated receptor from an identified hazard but is likely that, at worst, this harm if realised would normally be mild.
Negligible risk	The presence of an identified hazard does not give rise to the potential to cause significant harm to a designated receptor.

3.5.6 The following potential pollutant linkages have been identified and are outlined within **Table 16** below:

Table 16: Risk Assessment

Assessment	Comments	Risk Characterisation
Source		
Potential for on-site pollutants	The piggery, ponds, unspecified pits, historic demolished agricultural buildings and Made Ground identified on the site walkover may act as a source of potential contaminants.	Moderate
Pathway		
Potential for pollutants to migrate on-site	The cohesive nature of the on-site superficial geology and moderate to very low permeability may allow for both downward migration and lateral migration in the form of surface run-off.	Low to moderate
Potential for pollutants to migrate off-site	The underlying superficial deposits with moderate to very low permeability could allow for the downward migration of contaminants through the soils. The variable permeability may also allow for surface water run-off off site and downslope to the north-west in extreme rainfall events.	Moderate
Receptor		
Environmental risk to human health	The proposed change of use will lead to an increase in people visiting the site. Potential sources of contamination have been identified; however as the	Low

Assessment	Comments	Risk Characterisation
	proposal seeks to construct a new car park with green roof and does not include any residential dwellings we consider the risk to human health to be low.	
Environmental risk to controlled waters	We consider the risks to be low based on the cohesive underlying geology	Low
Environmental risk to Biota	The current site proposal seeks to construct a new car parking area and track in areas currently occupied by open land. The proposal also plans to plant additional foliage and trees around the parking area and track. The impact on biota is considered to be low.	Low
Hazards to buildings – excluding ground gas	Significant cracks and structural defects were noted within the walls of the piggery however this building is not planned to be converted or demolished as part of the development.	Low
Litigation		
Environmental litigation (Part IIA)	Part IIA only applies to land with chemical contamination, where the contaminants pose an unacceptable risk to human health or the wider environment. It is highly unlikely the site would fall into this category.	Low
Owner liability	Potential liability issues have been identified but would likely be addressed by the planning regime.	Moderate
Development Implications		
Potential for soil remediation	Remediation of the on-site soils is unlikely to be required.	Low
Potential for groundwater remediation	Remediation of the on-site groundwater is unlikely to be required.	Low
Potential for gas protection measures	Development proposals do not seek to construct any residential buildings on the site, additionally the cohesive soils will prohibit lateral migration of gases through the soils. Therefore, we consider the potential for gas protection measure to be low.	Low
Special requirements for water supply pipes	Specialist pipework is not likely to be required as no buildings demanding a water supply are included as part of the proposal for this site.	n/a
Potential limitations on foundation design	We recommend specialist advice is sought to assess potential geotechnical limitations for the covered car park.	n/a

Assessment	Comments	Risk Characterisation
Risk of encountering materials classed as hazardous waste	No Asbestos Containing Materials (ACMs) were identified during the walkover and proposals do not seek to convert or demolish any on-site buildings. However, should development plans change, due to the age of the piggery building there is a possibility that ACMs could be present within the make-up of the structure. If the piggery is to be modified in the future we would recommend a HSG264 Pre-Demolition/ Major Refurbishment Asbestos Survey is completed. If ACMs are present these would likely be classified as hazardous waste.	Low

4 CONCLUSIONS AND RECOMMENDATIONS

- 4.1.1 Based on the information obtained and reviewed as part of this preliminary assessment, J P Chick & Partners Ltd would advise the following:

Discovery Strategy/ Watching Brief

- 4.1.2 It is recommended that a 'Discovery Strategy/ Watching Brief' is maintained on site, particularly during the groundwork stage. During any ground works an appraisal of the exposed soils should be made by a competent person, this as an example could be the site manager. If any material is noted to show visual and/or olfactory signs of contamination it should be stockpiled separately and tested prior to its appropriate removal off-site or re-use. If soils suspected of being contaminated are encountered, it is recommended that a contaminated land specialist is consulted.

HSG264 Pre-Demolition/Major Refurbishment Asbestos Survey

- 4.1.3 No Asbestos Containing Materials (ACMs) were identified during the walkover and proposals do not seek to convert or demolish any on-site buildings. However, should development plans change, due to the age of the piggery building there is a possibility that ACMs could be present within the make-up of the structure. If the piggery is to be modified in the future we would recommend undertaking a HSG264 Pre-Demolition/ Major refurbishment asbestos survey on the existing buildings. All identified ACMs should then be removed by a suitably experienced contractor, prior to the conversion or demolition of the building.

- Historical energy features
- Historical petrol stations

1.1 Historical industrial land uses

Records within 500m

36

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 1:10,560 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on [page 14 >](#)

ID	Location	Land use	Dates present	Group ID

This data is sourced from Ordnance Survey / Groundsure.

1.2 Historical tanks

Records within 500m

6

Tank features digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on [page 14 >](#)

ID	Location	Land use	Dates present	Group ID
D	116m SE	Unspecified Tank	1924	342999
F	198m N	Sewage Tanks	1924	347739
F	212m N	Unspecified Tank	1979 - 1992	351219

J	488m E	Unspecified Tank	1971 - 1993	358025

This data is sourced from Ordnance Survey / Groundsure.

1.3 Historical energy features

Records within 500m

2

Energy features digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on [page 14 >](#)

ID	Location	Land use	Dates present	Group ID
D	82m SE	Electricity Substation	1996 - 1999	238231
4	243m NW	Electricity Substation	1971 - 1999	237709

This data is sourced from Ordnance Survey / Groundsure.

1.4 Historical petrol stations

Records within 500m

1

Petrol stations digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on [page 14 >](#)

ID	Location	Land use	Dates present	Group ID
G	313m W	Filling Station	1971	3830

This data is sourced from Ordnance Survey / Groundsure.

1.5 Historical garages

Records within 500m

0

Garages digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

1.6 Historical military land

Records within 500m

0

Areas of military land digitised from multiple sources including the National Archives, local records, MOD records and verified other sources, intelligently grouped into contiguous features.

This data is sourced from Ordnance Survey / Groundsure / other sources.

G	244m NW	Electricity Substation	1971	237709

This data is sourced from Ordnance Survey / Groundsure.

2.4 Historical petrol stations

Records within 500m

1

Petrol stations digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use - un-grouped map on [page 19 >](#)

ID	Location	Land Use	Date	Group ID
H	313m W	Filling Station	1971	3830

This data is sourced from Ordnance Survey / Groundsure.

2.5 Historical garages

Records within 500m

0

Garages digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

3 Waste and landfill

- Site Outline
- Search buffers in metres (m)
- Waste exemptions

3.1 Active or recent landfill

Records within 500m

0

Active or recently closed landfill sites under Environment Agency/Natural Resources Wales regulation.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.2 Historical landfill (BGS records)

Records within 500m

0

Landfill sites identified on a survey carried out on behalf of the DoE in 1973. These sites may have been closed or operational at this time.

This data is sourced from the British Geological Survey.

3.3 Historical landfill (LA/mapping records)

Records within 500m**0**

Landfill sites identified from Local Authority records and high detail historical mapping.

This data is sourced from the Ordnance Survey/Groundsure and Local Authority records.

3.4 Historical landfill (EA/NRW records)

Records within 500m**0**

Known historical (closed) landfill sites (e.g. sites where there is no PPC permit or waste management licence currently in force). This includes sites that existed before the waste licensing regime and sites that have been licensed in the past but where a licence has been revoked, ceased to exist or surrendered and a certificate of completion has been issued.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.5 Historical waste sites

Records within 500m**0**

Waste site records derived from Local Authority planning records and high detail historical mapping.

This data is sourced from Ordnance Survey/Groundsure and Local Authority records.

3.6 Licensed waste sites

Records within 500m**0**

Active or recently closed waste sites under Environment Agency/Natural Resources Wales regulation.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.7 Waste exemptions

Records within 500m**6**

Activities involving the storage, treatment, use or disposal of waste that are exempt from needing a permit. Exemptions have specific limits and conditions that must be adhered to.

Features are displayed on the Waste and landfill map on [page 24 >](#)

ID	Location	Site	Reference	Category	Sub-Category	Description
A	51m NW	PRESTON, HITCHIN, SG4 7RT	WEX113762	Disposing of waste exemption	Not on a farm	Burning waste in the open

ID	Location	Site	Reference	Category	Sub-Category	Description

B	405m SW	-	WEX081003	Storing waste exemption	On a farm	Storage of sludge
B	438m S	-	WEX148176	Storing waste exemption	On a Farm	Storage of sludge
B	438m S	-	WEX081004	Storing waste exemption	On a farm	Storage of sludge

This data is sourced from the Environment Agency and Natural Resources Wales.

4 Current industrial land use

- Site Outline
- Search buffers in metres (m)
- Recent industrial land uses
- Gas pipelines
- Licensed Discharges to controlled waters

4.1 Recent industrial land uses

Records within 250m

5

Current potentially contaminative industrial sites.

Features are displayed on the Current industrial land use map on [page 27](#) >

ID	Location	Company	Address	Activity	Category
1	On site	Pumping Station (Disused)	Hertfordshire, SG4	Water Pumping Stations	Industrial Features
2	22m E	Mast (Telecommunication)	Hertfordshire, SG4	Telecommunications Features	Infrastructure and Facilities

ID	Location	Company	Address	Activity	Category
3	88m SE	Electricity Sub Station	Hertfordshire, SG4	Electrical Features	Infrastructure and Facilities
4	221m N	Works (Disused)	Hertfordshire, SG4	Unspecified Works Or Factories	Industrial Features
6	245m NW	Electricity Sub Station	Hertfordshire, SG4	Electrical Features	Infrastructure and Facilities

This data is sourced from Ordnance Survey.

4.2 Current or recent petrol stations

Records within 500m	0
----------------------------	----------

Open, closed, under development and obsolete petrol stations.

This data is sourced from Experian.

4.3 Electricity cables

Records within 500m	0
----------------------------	----------

High voltage underground electricity transmission cables.

This data is sourced from National Grid.

4.4 Gas pipelines

Records within 500m	1
----------------------------	----------

High pressure underground gas transmission pipelines.

Features are displayed on the Current industrial land use map on [page 27 >](#)

ID	Location	Pipe Name	Details	
8	399m SE	GREAT WILBRAHAM TO WHITWELL	Pipe Number: - Pipeline Safety Regulations Number: - Ownership: National Grid Maximum Operating Pressure (Bar): -	Pipeline Diameter (mm): 900 Wall Thickness (mm): - Year of commission: Not specified Abandonment Status: Not abandoned

This data is sourced from National Grid.

4.5 Sites determined as Contaminated Land

Records within 500m

0

Contaminated Land Register of sites designated under Part 2a of the Environmental Protection Act 1990.

This data is sourced from Local Authority records.

4.6 Control of Major Accident Hazards (COMAH)

Records within 500m

0

Control of Major Accident Hazards (COMAH) sites. This data includes upper and lower tier sites, and includes a historical archive of COMAH sites and Notification of Installations Handling Hazardous Substances (NIHHS) records.

This data is sourced from the Health and Safety Executive.

4.7 Regulated explosive sites

Records within 500m

0

Sites registered and licensed by the Health and Safety Executive under the Manufacture and Storage of Explosives Regulations 2005 (MSER). The last update to this data was in April 2011.

This data is sourced from the Health and Safety Executive.

4.8 Hazardous substance storage/usage

Records within 500m

0

Consents granted for a site to hold certain quantities of hazardous substances at or above defined limits in accordance with the Planning (Hazardous Substances) Regulations 2015.

This data is sourced from Local Authority records.

4.9 Historical licensed industrial activities (IPC)

Records within 500m

0

Integrated Pollution Control (IPC) records of substance releases to air, land and water. This data represents a historical archive as the IPC regime has been superseded.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.10 Licensed industrial activities (Part A(1))

Records within 500m

0

Records of Part A(1) installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.11 Licensed pollutant release (Part A(2)/B)

Records within 500m

0

Records of Part A(2) and Part B installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

This data is sourced from Local Authority records.

4.12 Radioactive Substance Authorisations

Records within 500m

0

Records of the storage, use, accumulation and disposal of radioactive substances regulated under the Radioactive Substances Act 1993.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.13 Licensed Discharges to controlled waters

Records within 500m

4

Discharges of treated or untreated effluent to controlled waters under the Water Resources Act 1991.

Features are displayed on the Current industrial land use map on [page 27 >](#)

ID	Location	Address	Details

This data is sourced from the Environment Agency and Natural Resources Wales.

4.14 Pollutant release to surface waters (Red List)

Records within 500m	0
----------------------------	----------

Discharges of specified substances under the Environmental Protection (Prescribed Processes and Substances) Regulations 1991.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.15 Pollutant release to public sewer

Records within 500m	0
----------------------------	----------

Discharges of Special Category Effluents to the public sewer.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.16 List 1 Dangerous Substances

Records within 500m	0
----------------------------	----------

Discharges of substances identified on List I of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.17 List 2 Dangerous Substances

Records within 500m

0

Discharges of substances identified on List II of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.18 Pollution Incidents (EA/NRW)

Records within 500m

0

Records of substantiated pollution incidents. Since 2006 this data has only included category 1 (major) and 2 (significant) pollution incidents.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.19 Pollution inventory substances

Records within 500m

0

The pollution inventory (substances) includes reporting on annual emissions of certain regulated substances to air, controlled waters and land. A reporting threshold for each substance is also included. Where emissions fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

4.20 Pollution inventory waste transfers

Records within 500m

0

The pollution inventory (waste transfers) includes reporting on annual transfers and recovery/disposal of controlled wastes from a site. A reporting threshold for each waste type is also included. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

4.21 Pollution inventory radioactive waste

Records within 500m

0

The pollution inventory (radioactive wastes) includes reporting on annual releases of radioactive substances from a site, including the means of release. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

5 Hydrogeology - Superficial aquifer

5.1 Superficial aquifer

Records within 500m

11

Aquifer status of groundwater held within superficial geology.

Features are displayed on the Hydrogeology map on [page 33](#) >

ID	Location	Designation	Description
1	On site	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
2	On site	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow

ID	Location	Designation	Description
3	54m NW	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
4	92m N	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
5	114m N	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
6	169m NW	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
7	192m NE	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
8	289m SW	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
9	332m NW	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
10	338m SE	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
11	413m NE	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

5.3 Groundwater vulnerability

Records within 50m

3

An assessment of the vulnerability of groundwater to a pollutant discharged at ground level based on the hydrological, geological, hydrogeological and soil properties within a one kilometre square grid. Groundwater vulnerability is described as High, Medium or Low as follows:

- High - Areas able to easily transmit pollution to groundwater. They are likely to be characterised by high leaching soils and the absence of low permeability superficial deposits.
- Medium - Intermediate between high and low vulnerability.
- Low - Areas that provide the greatest protection from pollution. They are likely to be characterised by low leaching soils and/or the presence of superficial deposits characterised by a low permeability.

Features are displayed on the Groundwater vulnerability map on [page 37](#) >

ID	Location	Summary	Soil / surface	Superficial geology	Bedrock geology
1	On site	Summary Classification: Secondary superficial aquifer - Medium Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: Intermediate Infiltration value: 40-70% Dilution value: <300mm/year	Vulnerability: Medium Aquifer type: Secondary Thickness: 3-10m Patchiness value: >90% Recharge potential: Low	Vulnerability: Low Aquifer type: Principal Flow mechanism: Well connected fractures
A	On site	Summary Classification: Principal bedrock aquifer - Low Vulnerability Combined classification: Productive Bedrock Aquifer, Unproductive Superficial Aquifer	Leaching class: Intermediate Infiltration value: 40-70% Dilution value: <300mm/year	Vulnerability: Unproductive Aquifer type: Unproductive Thickness: 3-10m Patchiness value: >90% Recharge potential: Low	Vulnerability: Low Aquifer type: Principal Flow mechanism: Well connected fractures
B	34m NW	Summary Classification: Principal bedrock aquifer - Low Vulnerability Combined classification: Productive Bedrock Aquifer, No Superficial Aquifer	Leaching class: Intermediate Infiltration value: 40-70% Dilution value: <300mm/year	Vulnerability: - Aquifer type: - Thickness: 3-10m Patchiness value: >90% Recharge potential: Low	Vulnerability: Low Aquifer type: Principal Flow mechanism: Well connected fractures

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

5.4 Groundwater vulnerability- soluble rock risk

Records on site	1
------------------------	----------

This dataset identifies areas where solution features that enable rapid movement of a pollutant may be present within a 1km grid square.

ID	Maximum soluble risk category	Percentage of grid square covered by maximum risk
A	Very significant soluble rocks are likely to be present with a moderate possibility of localised natural subsidence or dissolution-related degradation of bedrock, especially in adverse conditions such as concentrated surface or subsurface water flow.	11.0%

This data is sourced from the British Geological Survey and the Environment Agency.

5.5 Groundwater vulnerability- local information

Records on site

0

This dataset identifies areas where additional local information affecting vulnerability is held by the Environment Agency. Further information can be obtained by contacting the Environment Agency local Area groundwater team through the Environment Agency National Customer Call Centre on 03798 506 506 or by email on enquiries@environment-agency.gov.uk ↗.

This data is sourced from the British Geological Survey and the Environment Agency.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.9 Source Protection Zones

Records within 500m	1
----------------------------	----------

Source Protection Zones define the sensitivity of an area around a potable abstraction site to contamination.

Features are displayed on the Abstractions and Source Protection Zones map on [page 40 >](#)

ID	Location	Type	Description
1	On site	3	Total catchment

This data is sourced from the Environment Agency and Natural Resources Wales.

5.10 Source Protection Zones (confined aquifer)

Records within 500m	0
----------------------------	----------

Source Protection Zones in the confined aquifer define the sensitivity around a deep groundwater abstraction to contamination. A confined aquifer would normally be protected from contamination by overlying geology and is only considered a sensitive resource if deep excavation/drilling is taking place.

This data is sourced from the Environment Agency and Natural Resources Wales.

6 Hydrology

- Site Outline
- Search buffers in metres (m)
- Water Network (OS MasterMap)
- Surface water features (wider than 5m)
- Surface water features (narrower than 5m)
- ⋯ WFD River, canal and surface water transfer water bodies
- WFD Lake water bodies
- WFD Transitional and coastal water bodies
- WFD Surface water body catchments boundaries
- WFD Groundwater body boundaries

6.1 Water Network (OS MasterMap)

Records within 250m

0

Detailed water network of Great Britain showing the flow and precise central course of every river, stream, lake and canal.

This data is sourced from the Ordnance Survey.

6.2 Surface water features

Records within 250m

1

Covering rivers, streams and lakes (some overlap with OS MasterMap Water Network data in previous section) but additionally covers smaller features such as ponds. Rivers and streams narrower than 5m are represented as a single line. Lakes, ponds and rivers or streams wider than 5m are represented as polygons.

Features are displayed on the Hydrology map on [page 46 >](#)

This data is sourced from the Ordnance Survey.

6.3 WFD Surface water body catchments

Records on site	2
------------------------	----------

The Water Framework Directive is an EU-led framework for the protection of inland surface waters, estuaries, coastal waters and groundwater through river basin-level management planning. In terms of surface water, these basins are broken down into smaller units known as management, operational and water body catchments.

Features are displayed on the Hydrology map on [page 46 >](#)

ID	Location	Type	Water body catchment	Water body ID	Operational catchment	Management catchment
1	On site	River	Purwell	GB105033037690	Ivel	Ouse Upper and Bedford
2	On site	River	Mimram (Whitwell to Codicote Bottom)	GB106038033460	Lee Upper	Lee Upper

This data is sourced from the Environment Agency and Natural Resources Wales.

6.4 WFD Surface water bodies

Records identified	2
---------------------------	----------

Surface water bodies under the Directive may be rivers, lakes, estuary or coastal. To achieve the purpose of the Directive, environmental objectives have been set and are reported on for each water body. The progress towards delivery of the objectives is then reported on by the relevant competent authorities at the end of each six-year cycle. The river water body directly associated with the catchment listed in the previous section is detailed below, along with any lake, canal, coastal or artificial water body within 250m of the site. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each water body listed.

Features are displayed on the Hydrology map on [page 46 >](#)

ID	Location	Type	Name	Water body ID	Overall rating	Chemical rating	Ecological rating	Year

-	2547m NE	River	Purwell	GB105033037690 ↗	Moderate	Fail	Moderate	2019

This data is sourced from the Environment Agency and Natural Resources Wales.

6.5 WFD Groundwater bodies

Records on site

1

Groundwater bodies are also covered by the Directive and the same regime of objectives and reporting detailed in the previous section is in place. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each groundwater body listed.

Features are displayed on the Hydrology map on [page 46](#) >

ID	Location	Name	Water body ID	Overall rating	Chemical rating	Quantitative	Year
3	On site	Upper Bedford Ouse Chalk	GB40601G603000 ↗	Poor	Poor	Poor	2019

This data is sourced from the Environment Agency and Natural Resources Wales.

7 River and coastal flooding

7.1 Risk of flooding from rivers and the sea

Records within 50m

0

The chance of flooding from rivers and/or the sea in any given year, based on cells of 50m within the Risk of Flooding from Rivers and Sea (RoFRaS)/Flood Risk Assessment Wales (FRAW) models. Each cell is allocated one of four flood risk categories, taking into account flood defences and their condition. The risk categories for RoFRaS for rivers and the sea and FRAW for rivers are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 100 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 100 chance) or High (greater than or equal to 1 in 30 chance). The risk categories for FRAW for the sea are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 200 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 200 chance) or High (greater than or equal to 1 in 30 chance).

This data is sourced from the Environment Agency and Natural Resources Wales.

7.2 Historical Flood Events

Records within 250m

0

Records of historic flooding from rivers, the sea, groundwater and surface water. Records began in 1946 when predecessor bodies started collecting detailed information about flooding incidents, although limited details may be included on flooding incidents prior to this date. Takes into account the presence of defences, structures, and other infrastructure where they existed at the time of flooding, and includes flood extents that may have been affected by overtopping, breaches or blockages.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.3 Flood Defences

Records within 250m

0

Records of flood defences owned, managed or inspected by the Environment Agency and Natural Resources Wales. Flood defences can be structures, buildings or parts of buildings. Typically these are earth banks, stone and concrete walls, or sheet-piling that is used to prevent or control the extent of flooding.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.4 Areas Benefiting from Flood Defences

Records within 250m

0

Areas that would benefit from the presence of flood defences in a 1 in 100 (1%) chance of flooding each year from rivers or 1 in 200 (0.5%) chance of flooding each year from the sea.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.5 Flood Storage Areas

Records within 250m

0

Areas that act as a balancing reservoir, storage basin or balancing pond to attenuate an incoming flood peak to a flow level that can be accepted by the downstream channel or to delay the timing of a flood peak so that its volume is discharged over a longer period.

This data is sourced from the Environment Agency and Natural Resources Wales.

River and coastal flooding - Flood Zones

7.6 Flood Zone 2

Records within 50m

0

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land between Flood Zone 3 (see next section) and the extent of the flooding from rivers or the sea with a 1 in 1000 (0.1%) chance of flooding each year.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.7 Flood Zone 3

Records within 50m

0

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land with a 1 in 100 (1%) or greater chance of flooding each year from rivers or a 1 in 200 (0.5%) or greater chance of flooding each year from the sea.

This data is sourced from the Environment Agency and Natural Resources Wales.

8 Surface water flooding

© Crown copyright and database rights 2024. Ordnance Survey licence 100035207

— Site Outline

Search buffers in metres (m)

1 in 1000 return period

- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

1 in 250 return period

- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

1 in 100 return period

- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

1 in 30 return period

- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

8.1 Surface water flooding

Highest risk on site

Negligible

Highest risk within 50m

1 in 30 year, 0.3m - 1.0m

Ambiental Risk Analytics surface water (pluvial) FloodMap identifies areas likely to flood as a result of extreme rainfall events, i.e. land naturally vulnerable to surface water ponding or flooding. This data set was produced by simulating 1 in 30 year, 1 in 100 year, 1 in 250 year and 1 in 1,000 year rainfall events. Modern urban drainage systems are typically built to cope with rainfall events between 1 in 20 and 1 in 30 years, though some older ones may flood in a 1 in 5 year rainfall event.

Features are displayed on the Surface water flooding map on [page 52 >](#)

The data shown on the map and in the table above shows the highest likelihood of flood events happening at the site. Lower likelihood events may have greater flood depths and hence a greater potential impact on a site.

The table below shows the maximum flood depths for a range of return periods for the site.

Return period	Maximum modelled depth
1 in 1000 year	Negligible
1 in 250 year	Negligible
1 in 100 year	Negligible
1 in 30 year	Negligible

This data is sourced from Ambiantal Risk Analytics.

9 Groundwater flooding

9.1 Groundwater flooding

Highest risk on site

Low

Highest risk within 50m

Low

Groundwater flooding is caused by unusually high groundwater levels. It occurs when the water table rises above the ground surface or within underground structures such as basements or cellars. Groundwater flooding tends to exhibit a longer duration than surface water flooding, possibly lasting for weeks or months, and as a result it can cause significant damage to property. This risk assessment is based on a 1 in 100 year return period and a 5m Digital Terrain Model (DTM).

Features are displayed on the Groundwater flooding map on [page 54 >](#)

This data is sourced from Ambiantal Risk Analytics.

10 Environmental designations

- Site Outline
- Search buffers in metres (m)
- Sites of Special Scientific Interest (SSSI)
- Designated Ancient Woodland
- Green Belt

© Crown copyright and database rights 2024. Ordnance Survey licence 100035207

10.1 Sites of Special Scientific Interest (SSSI)

Records within 2000m

2

Sites providing statutory protection for the best examples of UK flora, fauna, or geological or physiographical features. Originally notified under the National Parks and Access to the Countryside Act 1949, SSSIs were re-notified under the Wildlife and Countryside Act 1981. Improved provisions for the protection and management of SSSIs were introduced by the Countryside and Rights of Way Act 2000 (in England and Wales) and (in Scotland) by the Nature Conservation (Scotland) Act 2004 and the Wildlife and Natural Environment (Scotland) Act 2010.

Features are displayed on the Environmental designations map on [page 55](#) >

ID	Location	Name	Data source
B	340m NW	Wain Wood	Natural England

ID	Location	Name	Data source
C	452m N	Wain Wood	Natural England

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.2 Conserved wetland sites (Ramsar sites)

Records within 2000m	0
-----------------------------	----------

Ramsar sites are designated under the Convention on Wetlands of International Importance, agreed in Ramsar, Iran, in 1971. They cover all aspects of wetland conservation and wise use, recognizing wetlands as ecosystems that are extremely important for biodiversity conservation in general and for the well-being of human communities. These sites cover a broad definition of wetland; marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, and even some marine areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.3 Special Areas of Conservation (SAC)

Records within 2000m	0
-----------------------------	----------

Areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.4 Special Protection Areas (SPA)

Records within 2000m	0
-----------------------------	----------

Sites classified by the UK Government under the EC Birds Directive, SPAs are areas of the most important habitat for rare (listed on Annex I to the Directive) and migratory birds within the European Union.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.5 National Nature Reserves (NNR)

Records within 2000m	0
-----------------------------	----------

Sites containing examples of some of the most important natural and semi-natural terrestrial and coastal ecosystems in Great Britain. They are managed to conserve their habitats, provide special opportunities for scientific study or to provide public recreation compatible with natural heritage interests.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.6 Local Nature Reserves (LNR)

Records within 2000m

0

Sites managed for nature conservation, and to provide opportunities for research and education, or simply enjoying and having contact with nature. They are declared by local authorities under the National Parks and Access to the Countryside Act 1949 after consultation with the relevant statutory nature conservation agency.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.7 Designated Ancient Woodland

Records within 2000m

21

Ancient woodlands are classified as areas which have been wooded continuously since at least 1600 AD. This includes semi-natural woodland and plantations on ancient woodland sites. 'Wooded continuously' does not mean there is or has previously been continuous tree cover across the whole site, and not all trees within the woodland have to be old.

Features are displayed on the Environmental designations map on [page 55 >](#)

ID	Location	Name	Woodland Type
2	1m SE	Unknown	Ancient Replanted Woodland
3	301m NW	Unknown	Ancient Replanted Woodland

7	823m S	Hitch/hearnsfield Woods	Ancient Replanted Woodland
8	927m S	Hitch/hearnsfield Woods	Ancient & Semi-Natural Woodland
9	944m NW	Unknown	Ancient & Semi-Natural Woodland
D	1125m S	Pinfold Wood	Ancient Replanted Woodland
10	1129m NE	Vicars Grove	Ancient & Semi-Natural Woodland
11	1150m S	Hitch/hearnsfield Woods	Ancient Replanted Woodland

ID	Location	Name	Woodland Type
D	1153m S	Pinfold Wood	Ancient & Semi-Natural Woodland
12	1175m S	Foxholes Wood	Ancient & Semi-Natural Woodland
-	1631m W	Deans Wood	Ancient Replanted Woodland
-	1632m W	Stony Wood	Ancient Replanted Woodland
-	1950m S	Chalkleys Woods	Ancient & Semi-Natural Woodland

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.8 Biosphere Reserves

Records within 2000m

0

Biosphere Reserves are internationally recognised by UNESCO as sites of excellence to balance conservation and socioeconomic development between nature and people. They are recognised under the Man and the Biosphere (MAB) Programme with the aim of promoting sustainable development founded on the work of the local community.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.9 Forest Parks

Records within 2000m

0

These are areas managed by the Forestry Commission designated on the basis of recreational, conservation or scenic interest.

This data is sourced from the Forestry Commission.

10.10 Marine Conservation Zones

Records within 2000m

0

A type of marine nature reserve in UK waters established under the Marine and Coastal Access Act (2009). They are designated with the aim to protect nationally important, rare or threatened habitats and species.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.11 Green Belt

Records within 2000m

1

Areas designated to prevent urban sprawl by keeping land permanently open.

Features are displayed on the Environmental designations map on [page 55 >](#)

ID	Location	Name	Local Authority name
1	On site	London	North Hertfordshire

This data is sourced from the Ministry of Housing, Communities and Local Government.

10.12 Proposed Ramsar sites

Records within 2000m

0

Ramsar sites are areas listed as a Wetland of International Importance under the Convention on Wetlands of International Importance especially as Waterfowl Habitat (the Ramsar Convention) 1971. The sites here supplied have a status of 'Proposed' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.13 Possible Special Areas of Conservation (pSAC)

Records within 2000m

0

Special Areas of Conservation are areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive. Those sites supplied here are those with a status of 'Possible' having been identified for potential adoption under the framework.

This data is sourced from Natural England and Natural Resources Wales.

10.14 Potential Special Protection Areas (pSPA)

Records within 2000m

0

Special Protection Areas (SPAs) are areas designated (or 'classified') under the European Union Wild Birds Directive for the protection of nationally and internationally important populations of wild birds. Those sites supplied here are those with a status of 'Potential' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.15 Nitrate Sensitive Areas

Records within 2000m

0

Areas where nitrate concentrations in drinking water sources exceeded or was at risk of exceeding the limit of 50 mg/l set by the 1980 EC Drinking Water Directive. Voluntary agricultural measures as a means of reducing the levels of nitrate were introduced by DEFRA as MAFF, with payments being made to farmers who complied. The scheme was started as a pilot in 1990 in ten areas, later implemented within 32 areas. The scheme was closed to further new entrants in 1998, although existing agreements continued for their full term. All Nitrate Sensitive Areas fell within the areas designated as Nitrate Vulnerable Zones (NVZs) in 1996 under the EC Nitrate Directive (91/676/EEC).

This data is sourced from Natural England.

10.16 Nitrate Vulnerable Zones

Records within 2000m

6

Areas at risk from agricultural nitrate pollution designated under the EC Nitrate Directive (91/676/EEC). These are areas of land that drain into waters polluted by nitrates. Farmers operating within these areas have to follow mandatory rules to tackle nitrate loss from agriculture.

Location	Name	Type	NVZ ID	Status
On site	Great Ouse NVZ	Surface Water	391	Existing
On site	LEE NVZ	Surface Water	443	Existing
On site	Luton Chalk	Groundwater	146	Existing
On site	Anglian Chalk	Groundwater	71	Existing
1072m N	Great Ouse NVZ	Surface Water	391	Existing
1072m N	Anglian Chalk	Groundwater	71	Existing

This data is sourced from Natural England and Natural Resources Wales.

SSSI Impact Zones and Units

10.17 SSSI Impact Risk Zones

Records on site

2

Developed to allow rapid initial assessment of the potential risks to SSSIs posed by development proposals. They define zones around each SSSI which reflect the particular sensitivities of the features for which it is notified and indicate the types of development proposal which could potentially have adverse impacts.

Features are displayed on the SSSI Impact Zones and Units map on [page 61](#) >

ID	Location	Type of developments requiring consultation
1	On site	Infrastructure - Pipelines and underground cables, pylons and overhead cables. Any transport proposal including road, rail and by water (excluding routine maintenance). Airports, helipads and other aviation proposals. Minerals, Oil and Gas - Planning applications for quarries, including: new proposals, Review of Minerals Permissions (ROMP), extensions, variations to conditions etc. Oil & gas exploration/extraction. Residential - Residential development of 100 units or more. Rural residential - Any residential development of 50 or more houses outside existing settlements/urban areas. Air pollution - Any industrial/agricultural development that could cause AIR POLLUTION (incl: industrial processes, livestock & poultry units with floorspace > 500m², slurry lagoons & digestate stores > 200m², manure stores > 250t). Combustion - General combustion processes >20MW energy input. Incl: energy from waste incineration, other incineration, landfill gas generation plant, pyrolysis/gasification, anaerobic digestion, sewage treatment works, other incineration/ combustion. Waste - Landfill. Incl: inert landfill, non-hazardous landfill, hazardous landfill. Composting - Any composting proposal with more than 500 tonnes maximum annual operational throughput. Incl: open windrow composting, in-vessel composting, anaerobic digestion, other waste management. Water supply - Large infrastructure such as warehousing / industry where net additional gross internal floorspace is > 1,000m² or any development needing its own water supply .
2	On site	Infrastructure - Pipelines and underground cables, pylons and overhead cables. Any transport proposal including road, rail and by water (excluding routine maintenance). 11 Visual and cultural designations

- Site Outline
- Search buffers in metres (m)
- Listed buildings
- Conservation areas
- Conservation areas - no data
- National Parks
- Areas of Outstanding Natural Beauty
- Registered parks and gardens
- Scheduled Monuments
- World Heritage Sites

11.1 World Heritage Sites

Records within 250m

0

Sites designated for their globally important cultural or natural interest requiring appropriate management and protection measures. World Heritage Sites are designated to meet the UK's commitments under the World Heritage Convention.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.2 Area of Outstanding Natural Beauty

Records within 250m**0**

Areas of Outstanding Natural Beauty (AONB) are conservation areas, chosen because they represent 18% of the finest countryside. Each AONB has been designated for special attention because of the quality of their flora, fauna, historical and cultural associations, and/or scenic views. The National Parks and Access to the Countryside Act of 1949 created AONBs and the Countryside and Rights of Way Act, 2000 added further regulation and protection. There are likely to be restrictions to some developments within these areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

11.3 National Parks

Records within 250m**0**

In England and Wales, the purpose of National Parks is to conserve and enhance landscapes within the countryside whilst promoting public enjoyment of them and having regard for the social and economic well-being of those living within them. In Scotland National Parks have the additional purpose of promoting the sustainable use of the natural resources of the area and the sustainable social and economic development of its communities. The National Parks and Access to the Countryside Act 1949 established the National Park designation in England and Wales, and The National Parks (Scotland) Act 2000 in Scotland.

This data is sourced from Natural England, Natural Resources Wales and the Scottish Government.

11.4 Listed Buildings

Records within 250m**15**

Buildings listed for their special architectural or historical interest. Building control in the form of 'listed building consent' is required in order to make any changes to that building which might affect its special interest. Listed buildings are graded to indicate their relative importance, however building controls apply to all buildings equally, irrespective of their grade, and apply to the interior and exterior of the building in its entirety, together with any curtilage structures.

Features are displayed on the Visual and cultural designations map on [page 64 >](#)

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.5 Conservation Areas

Records within 250m

1

Local planning authorities are obliged to designate as conservation areas any parts of their own area that are of special architectural or historic interest, the character and appearance of which it is desirable to preserve or enhance. Designation of a conservation area gives broader protection than the listing of individual buildings. All the features within the area, listed or otherwise, are recognised as part of its character. Conservation area designation is the means of recognising the importance of all factors and of ensuring that planning decisions address the quality of the landscape in its broadest sense.

Features are displayed on the Visual and cultural designations map on [page 64](#) >

ID	Location	Name	District	Date of designation
3	On site	Preston	North Hertfordshire	08/06/1970

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.6 Scheduled Ancient Monuments

Records within 250m

0

A scheduled monument is an historic building or site that is included in the Schedule of Monuments kept by the Secretary of State for Digital, Culture, Media and Sport. The regime is set out in the Ancient Monuments and Archaeological Areas Act 1979. The Schedule of Monuments has c.20,000 entries and includes sites such as Roman remains, burial mounds, castles, bridges, earthworks, the remains of deserted villages and industrial sites. Monuments are not graded, but all are, by definition, considered to be of national importance.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.7 Registered Parks and Gardens

Records within 250m

1

Parks and gardens assessed to be of particular interest and of special historic interest. The emphasis being on 'designed' landscapes, rather than on planting or botanical importance. Registration is a 'material consideration' in the planning process, meaning that planning authorities must consider the impact of any proposed development on the special character of the landscape.

Features are displayed on the Visual and cultural designations map on [page 64](#) >

12.1 Agricultural Land Classification

Records within 250m

1

Classification of the quality of agricultural land taking into consideration multiple factors including climate, physical geography and soil properties. It should be noted that the categories for the grading of agricultural land are not consistent across England, Wales and Scotland.

Features are displayed on the Agricultural designations map on [page 68](#) >

ID	Location	Classification	Description
1	On site	Grade 3	Good to moderate quality agricultural land. Land with moderate limitations which affect the choice of crops, timing and type of cultivation, harvesting or the level of yield. Where more demanding crops are grown yields are generally lower or more variable than on land in Grades 1 and 2.

This data is sourced from Natural England.

12.2 Open Access Land

Records within 250m

0

The Countryside and Rights of Way Act 2000 (CROW Act) gives a public right of access to land without having to use paths. Access land includes mountains, moors, heaths and downs that are privately owned. It also includes common land registered with the local council and some land around the England Coast Path. Generally permitted activities on access land are walking, running, watching wildlife and climbing.

This data is sourced from Natural England and Natural Resources Wales.

12.3 Tree Felling Licences

Records within 250m

3

Felling Licence Application (FLA) areas approved by Forestry Commission England. Anyone wishing to fell trees must ensure that a licence or permission under a grant scheme has been issued by the Forestry Commission before any felling is carried out or that one of the exceptions apply.

Features are displayed on the Agricultural designations map on [page 68 >](#)

ID	Location	Description	Reference	Application date

4	240m N	Clear Fell (Unconditional)	017/545/14-15	16/04/2015

This data is sourced from the Forestry Commission.

12.4 Environmental Stewardship Schemes

Records within 250m

3

Environmental Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. The schemes identified may be historical schemes that have now expired, or may still be active.

Location	Reference	Scheme	Start Date	End date
On site	AG00421077	Entry Level plus Higher Level Stewardship	01/09/2013	31/08/2023
0m NE	AG00421077	Entry Level plus Higher Level Stewardship	01/09/2013	31/08/2023
91m NW	AG00421077	Entry Level plus Higher Level Stewardship	01/09/2013	31/08/2023

This data is sourced from Natural England.

12.5 Countryside Stewardship Schemes

Records within 250m

2

Countryside Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. Main objectives are to improve the farmed environment for wildlife and to reduce diffuse water pollution.

Location	Reference	Scheme	Start Date	End Date
120m E	1058195	Countryside Stewardship (Middle Tier)	01/01/2021	31/12/2025
205m SW	1459698	Countryside Stewardship (Middle Tier)	01/01/2023	31/12/2027

This data is sourced from Natural England.

13.1 Priority Habitat Inventory

Records within 250m

26

Habitats of principal importance as named under Natural Environment and Rural Communities Act (2006) Section 41.

Features are displayed on the Habitat designations map on [page 71](#) >

ID	Location	Main Habitat	Other habitats
1	On site	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
2	On site	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
3	0m N	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
4	0m NE	Deciduous woodland	Main habitat: DWOOD (INV > 50%)

ID	Location	Main Habitat	Other habitats
5	0m N	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
6	0m N	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
7	5m SE	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
8	21m SE	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
9	28m SE	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
10	73m S	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
11	80m SE	No main habitat but additional habitats present	Additional: TORCH (INV 50%)
12	108m SE	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
13	125m NW	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
14	135m NW	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
A	154m NW	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
15	159m S	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
B	163m SE	Traditional orchard	Overruled by Traditional Orchards HAP Inventory dataset
A	169m NW	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
16	174m S	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
17	193m NW	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
B	203m SE	Traditional orchard	Overruled by Traditional Orchards HAP Inventory dataset
C	205m SW	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
C	213m SW	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
18	221m SE	Traditional orchard	Overruled by Traditional Orchards HAP Inventory dataset
19	227m SE	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
20	228m SE	No main habitat but additional habitats present	Additional: DWOOD (INV 50%)

This data is sourced from Natural England.

13.2 Habitat Networks

Records within 250m

0

Habitat networks for 18 priority habitat networks (based primarily, but not exclusively, on the priority habitat inventory) and areas suitable for the expansion of networks through restoration and habitat creation.

This data is sourced from Natural England.

13.3 Open Mosaic Habitat

Records within 250m

0

Sites verified as Open Mosaic Habitat. Mosaic habitats are brownfield sites that are identified under the UK Biodiversity Action Plan as a priority habitat due to the habitat variation within a single site, supporting an array of invertebrates.

This data is sourced from Natural England.

13.4 Limestone Pavement Orders

Records within 250m

0

Limestone pavements are outcrops of limestone where the surface has been worn away by natural means over millennia. These rocks have the appearance of paving blocks, hence their name. Not only do they have geological interest, they also provide valuable habitats for wildlife. These habitats are threatened due to their removal for use in gardens and water features. Many limestone pavements have been designated as SSSIs which affords them some protection. In addition, Section 34 of the Wildlife and Countryside Act 1981 gave them additional protection via the creation of Limestone Pavement Orders, which made it a criminal offence to remove any part of the outcrop. The associated Limestone Pavement Priority Habitat is part of the UK Biodiversity Action Plan priority habitat in England.

This data is sourced from Natural England.

14 Geology 1:10,000 scale - Availability

17 Natural ground subsidence - Shrink swell clays

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.1 Shrink swell clays

Records within 50m

2

The potential hazard presented by soils that absorb water when wet (making them swell), and lose water as they dry (making them shrink). This shrink-swell behaviour is controlled by the type and amount of clay in the soil, and by seasonal changes in the soil moisture content (related to rainfall and local drainage).

Features are displayed on the Natural ground subsidence - Shrink swell clays map on [page 87 >](#)

Location	Hazard rating	Details
On site	Low	Ground conditions predominantly medium plasticity.
34m NW	Negligible	Ground conditions predominantly non-plastic.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Running sands

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.2 Running sands

Records within 50m

2

The potential hazard presented by rocks that can contain loosely-packed sandy layers that can become fluidised by water flowing through them. Such sands can 'run', removing support from overlying buildings and causing potential damage.

Features are displayed on the Natural ground subsidence - Running sands map on [page 88](#) >

Location	Hazard rating	Details
On site	Negligible	Running sand conditions are not thought to occur whatever the position of the water table. No identified constraints on lands use due to running conditions.

Location	Hazard rating	Details
On site	Very low	Running sand conditions are unlikely. No identified constraints on land use due to running conditions unless water table rises rapidly.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Compressible deposits

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.3 Compressible deposits

Records within 50m

1

The potential hazard presented by types of ground that may contain layers of very soft materials like clay or peat and may compress if loaded by overlying structures, or if the groundwater level changes, potentially resulting in depression of the ground and disturbance of foundations.

Features are displayed on the Natural ground subsidence - Compressible deposits map on [page 90 >](#)

Location	Hazard rating	Details
On site	Negligible	Compressible strata are not thought to occur.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Collapsible deposits

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☒ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.4 Collapsible deposits

Records within 50m

1

The potential hazard presented by natural deposits that could collapse when a load (such as a building) is placed on them or they become saturated with water.

Features are displayed on the Natural ground subsidence - Collapsible deposits map on [page 91](#) >

Location	Hazard rating	Details
On site	Very low	Deposits with potential to collapse when loaded and saturated are unlikely to be present.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Landslides

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.5 Landslides

Records within 50m

2

The potential for landsliding (slope instability) to be a hazard assessed using 1:50,000 scale digital maps of superficial and bedrock deposits, combined with information from the BGS National Landslide Database and scientific and engineering reports.

Features are displayed on the Natural ground subsidence - Landslides map on [page 92](#) >

Location	Hazard rating	Details
On site	Very low	Slope instability problems are not likely to occur but consideration to potential problems of adjacent areas impacting on the site should always be considered.

Location	Hazard rating	Details
34m NW	Negligible	Slope instability problems are not thought to occur but consideration to potential problems of adjacent areas impacting on the site should always be considered.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Ground dissolution of soluble rocks

© Crown copyright and database rights 2024. Ordnance Survey licence 100035207

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.6 Ground dissolution of soluble rocks

Records within 50m

4

The potential hazard presented by ground dissolution, which occurs when water passing through soluble rocks produces underground cavities and cave systems. These cavities reduce support to the ground above and can cause localised collapse of the overlying rocks and deposits.

Features are displayed on the Natural ground subsidence - Ground dissolution of soluble rocks map on [page 94](#)

Location	Hazard rating	Details
On site	Very low	Soluble rocks are present within the ground. Few dissolution features are likely to be present. Potential for difficult ground conditions or localised subsidence are at a level where they need not be considered.

Location	Hazard rating	Details
On site	Low	Soluble rocks are present within the ground. Some dissolution features may be present. Potential for difficult ground conditions are at a level where they may be considered, localised subsidence need not be considered except in exceptional circumstances.
On site	Moderate	Soluble rocks are present within the ground. Many dissolution features may be present. Potential for difficult ground conditions are at a level where they should be considered. Potential for subsidence is at a level where it may need to be considered.
34m NW	Very low	Soluble rocks are present within the ground. Few dissolution features are likely to be present. Potential for difficult ground conditions or localised subsidence are at a level where they need not be considered.

This data is sourced from the British Geological Survey.

F	206m N	Sewage Tanks	1922	1:10560

This is data is sourced from Ordnance Survey/Groundsure.

18.3 Underground workings

Records within 1000m

0

Historical land uses identified from Ordnance Survey mapping that indicate the presence of underground workings e.g. mine shafts.

This is data is sourced from Ordnance Survey/Groundsure.

18.4 Underground mining extents

Records within 500m

0

This data identifies underground mine workings that could present a potential risk, including adits and seam workings. These features have been identified from BGS Geological mapping and mine plans sourced from the BGS and various collections and sources.

This data is sourced from Groundsure.

18.5 Historical Mineral Planning Areas

Records within 500m

0

Boundaries of mineral planning permissions for England and Wales. This data was collated between the 1940s (and retrospectively to the 1930s) and the mid 1980s. The data includes permitted, withdrawn and refused permissions.

This data is sourced from the British Geological Survey.

18.6 Non-coal mining

Records within 1000m

2

The potential for historical non-coal mining to have affected an area. The assessment is drawn from expert knowledge and literature in addition to the digital geological map of Britain. Mineral commodities may be divided into seven general categories - vein minerals, chalk, oil shale, building stone, bedded ores, evaporites and 'other' commodities (including ball clay, jet, black marble, graphite and chert).

Features are displayed on the Mining and ground workings map on [page 96 >](#)

ID	Location	Name	Commodity	Class	Likelihood
2	On site	Not available	Chalk	A	Underground mine workings are uncommon, although the geology is similar to that worked elsewhere. Potential for difficult ground conditions are unlikely and are at a level where they need not be considered.
4	90m N	Not available	Chalk	A	Underground mine workings are uncommon, although the geology is similar to that worked elsewhere. Potential for difficult ground conditions are unlikely and are at a level where they need not be considered.

This data is sourced from the British Geological Survey.

18.7 JPB mining areas

Records on site

0

Areas which could be affected by former coal and other mining. This data includes some mine plans unavailable to the Coal Authority.

This data is sourced from Johnson Poole and Bloomer.

18.8 The Coal Authority non-coal mining

Records within 500m

0

This data provides an indication of the potential zone of influence of recorded underground non-coal mining workings. Any and all analysis and interpretation of Coal Authority Data in this report is made by Groundsure, and is in no way supported, endorsed or authorised by the Coal Authority. The use of the data is restricted to the terms and provisions contained in this report. Data reproduced in this report may be the copyright of the Coal Authority and permission should be sought from Groundsure prior to any re-use.

This data is sourced from The Coal Authority.

18.9 Researched mining

Records within 500m

0

This data indicates areas of potential mining identified from alternative or archival sources, including; BGS Geological paper maps, Lidar data, aerial photographs (from World War II onwards), archaeological data services, websites, Tithe maps, and various text/plans from collected books and reports. Some of this data is approximate and Groundsure have interpreted the resultant risk area and, where possible, specific areas of risk have been captured.

This data is sourced from Groundsure.

18.10 Mining record office plans

Records within 500m

0

This dataset is representative of Mining Record Office and/or plan extents held by Groundsure and should be considered approximate. Where possible, plans have been located and any specific areas of risk they depict have been captured.

This data is sourced from Groundsure.

18.11 BGS mine plans

Records within 500m

0

This dataset is representative of BGS mine plans held by Groundsure and should be considered approximate. Where possible, plans have been located and any specific areas of risk they depict have been captured.

This data is sourced from Groundsure.

18.12 Coal mining

Records on site	0
-----------------	---

Areas which could be affected by past, current or future coal mining.

This data is sourced from the Coal Authority.

18.13 Brine areas

Records on site	0
-----------------	---

The Cheshire Brine Compensation District indicates areas that may be affected by salt and brine extraction in Cheshire and where compensation would be available where damage from this mining has occurred. Damage from salt and brine mining can still occur outside this district, but no compensation will be available.

This data is sourced from the Cheshire Brine Subsidence Compensation Board.

18.14 Gypsum areas

Records on site	0
-----------------	---

Generalised areas that may be affected by gypsum extraction.

This data is sourced from British Gypsum.

18.15 Tin mining

Records on site	0
-----------------	---

Generalised areas that may be affected by historical tin mining.

This data is sourced from Groundsure.

18.16 Clay mining

Records on site	0
-----------------	---

Generalised areas that may be affected by kaolin and ball clay extraction.

This data is sourced from the Kaolin and Ball Clay Association (UK).

19 Ground cavities and sinkholes

19.1 Natural cavities

Records within 500m

0

Industry recognised national database of natural cavities. Sinkholes and caves are formed by the dissolution of soluble rock, such as chalk and limestone, gulls and fissures by cambering. Ground instability can result from movement of loose material contained within these cavities, often triggered by water.

This data is sourced from Stantec UK Ltd.

19.2 Mining cavities

Records within 1000m

0

Industry recognised national database of mining cavities. Degraded mines may result in hazardous subsidence (crown holes). Climatic conditions and water escape can also trigger subsidence over mine entrances and workings.

This data is sourced from Stantec UK Ltd.

19.3 Reported recent incidents

Records within 500m

0

This data identifies sinkhole information gathered from media reports and Groundsure's own records. This data goes back to 2014 and includes relative accuracy ratings for each event and links to the original data sources. The data is updated on a regular basis and should not be considered a comprehensive catalogue of all sinkhole events. The absence of data in this database does not mean a sinkhole definitely has not occurred during this time.

This data is sourced from Groundsure.

19.4 Historical incidents

Records within 500m

0

This dataset comprises an extract of 1:10,560, 1:10,000, 1:2,500 and 1:1,250 scale historical Ordnance Survey maps held by Groundsure, dating back to the 1840s. It shows shakeholes, deneholes and other 'holes' as noted on these maps. Dene holes are medieval chalk extraction pits, usually comprising a narrow shaft with a number of chambers at the base of the shaft. Shakeholes are an alternative name for suffusion sinkholes, most commonly found in the limestone landscapes of North Yorkshire but also extensively noted around the Brecon Beacons National Park.

Not all 'holes' noted on Ordnance Survey mapping will necessarily be present within this dataset.

This data is sourced from Groundsure.

19.5 National karst database

Records within 500m

0

This is a comprehensive database of national karst information gathered from a wide range of sources. BGS have collected data on five main types of karst feature: Sinkholes, stream links, caves, springs, and incidences of associated damage to buildings, roads, bridges and other engineered works.

Since the database was set up in 2002 data covering most of the evaporite karst areas of the UK have now been added, along with data covering about 60% of the Chalk, and 35% of the Carboniferous Limestone outcrops. Many of the classic upland karst areas have yet to be included. Recorded so far are: Over 800 caves, 1300 stream sinks, 5600 springs, 10,000 sinkholes.

The database is not yet complete, and not all records have been verified. The absence of data does not mean that karst features are not present at a site. A reliability rating is included with each record.

This data is sourced from the British Geological Survey.

20 Radon

20.1 Radon

Records on site

1

The Radon Potential data classifies areas based on their likelihood of a property having a radon level at or above the Action Level in Great Britain. The dataset is intended for use at 1:50,000 scale and was derived from both geological assessments and indoor radon measurements (more than 560,000 records). A minimum 50m buffer should be considered when searching the maps, as the smallest detectable feature at this scale is 50m. The findings of this section should supersede any estimations derived from the Indicative Atlas of Radon in Great Britain (1:100,000 scale).

Features are displayed on the Radon map on [page 104](#) >

Location	Estimated properties affected	Radon Protection Measures required
On site	Less than 1%	None

This data is sourced from the British Geological Survey and UK Health Security Agency.

21 Soil chemistry

21.1 BGS Estimated Background Soil Chemistry

Records within 50m

9

The estimated values provide the likely background concentration of the potentially harmful elements Arsenic, Cadmium, Chromium, Lead and Nickel in topsoil. The values are estimated primarily from rural topsoil data collected at a sample density of approximately 1 per 2 km². In areas where rural soil samples are not available, estimation is based on stream sediment data collected from small streams at a sampling density of 1 per 2.5 km²; this is the case for most of Scotland, Wales and southern England. The stream sediment data are converted to soil-equivalent concentrations prior to the estimation.

Location	Arsenic	Bioaccessible Arsenic	Lead	Bioaccessible Lead	Cadmium	Chromium	Nickel
On site	15 - 25 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	60 - 90 mg/kg	15 - 30 mg/kg
On site	15 - 25 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	60 - 90 mg/kg	15 - 30 mg/kg
On site	15 - 25 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	60 - 90 mg/kg	15 - 30 mg/kg
On site	15 - 25 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	60 - 90 mg/kg	15 - 30 mg/kg
On site	15 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	60 - 90 mg/kg	15 - 30 mg/kg
On site	15 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	60 - 90 mg/kg	15 - 30 mg/kg
On site	15 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	60 - 90 mg/kg	15 - 30 mg/kg
On site	15 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	60 - 90 mg/kg	15 - 30 mg/kg
34m NW	15 - 25 mg/kg	No data	100 mg/kg	60 mg/kg	1.8 mg/kg	60 - 90 mg/kg	30 - 45 mg/kg

This data is sourced from the British Geological Survey.

21.2 BGS Estimated Urban Soil Chemistry

Records within 50m

0

Estimated topsoil chemistry of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc and bioaccessible Arsenic and Lead in 23 urban centres across Great Britain. These estimates are derived from interpolation of the measured urban topsoil data referred to above and provide information across each city between the measured sample locations (4 per km²).

This data is sourced from the British Geological Survey.

21.3 BGS Measured Urban Soil Chemistry

Records within 50m

0

The locations and measured total concentrations (mg/kg) of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc in urban topsoil samples from 23 urban centres across Great Britain. These are collected at a sample density of 4 per km².

This data is sourced from the British Geological Survey.

22 Railway infrastructure and projects

22.1 Underground railways (London)

Records within 250m**0**

Details of all active London Underground lines, including approximate tunnel roof depth and operational hours.

This data is sourced from publicly available information by Groundsure.

22.2 Underground railways (Non-London)

Records within 250m**0**

Details of the Merseyrail system, the Tyne and Wear Metro and the Glasgow Subway. Not all parts of all systems are located underground. The data contains location information only and does not include a depth assessment.

This data is sourced from publicly available information by Groundsure.

22.3 Railway tunnels

Records within 250m**0**

Railway tunnels taken from contemporary Ordnance Survey mapping.

This data is sourced from the Ordnance Survey.

22.4 Historical railway and tunnel features

Records within 250m**0**

Railways and tunnels digitised from historical Ordnance Survey mapping as scales of 1:1,250, 1:2,500, 1:10,000 and 1:10,560.

This data is sourced from Ordnance Survey/Groundsure.

22.5 Royal Mail tunnels

Records within 250m**0**

The Post Office Railway, otherwise known as the Mail Rail, is an underground railway running through Central London from Paddington Head District Sorting Office to Whitechapel Eastern Head Sorting Office. The line is 10.5km long. The data includes details of the full extent of the tunnels, the depth of the tunnel, and the depth to track level.

This data is sourced from Groundsure/the Postal Museum.

22.6 Historical railways

Records within 250m

0

Former railway lines, including dismantled lines, abandoned lines, disused lines, historic railways and razed lines.

This data is sourced from OpenStreetMap.

22.7 Railways

Records within 250m

0

Currently existing railway lines, including standard railways, narrow gauge, funicular, trams and light railways.

This data is sourced from Ordnance Survey and OpenStreetMap.

22.8 Crossrail 1

Records within 500m

0

The Crossrail railway project links 41 stations over 100 kilometres from Reading and Heathrow in the west, through underground sections in central London, to Shenfield and Abbey Wood in the east.

This data is sourced from publicly available information by Groundsure.

22.9 Crossrail 2

Records within 500m

0

Crossrail 2 is a proposed railway linking the national rail networks in Surrey and Hertfordshire via an underground tunnel through London.

This data is sourced from publicly available information by Groundsure.

22.10 HS2

Records within 500m

0

HS2 is a proposed high speed rail network running from London to Manchester and Leeds via Birmingham. Main civils construction on Phase 1 (London to Birmingham) of the project began in 2019, and it is currently anticipated that this phase will be fully operational by 2026. Construction on Phase 2a (Birmingham to Crewe) is anticipated to commence in 2021, with the service fully operational by 2027. Construction on Phase 2b (Crewe to Manchester and Birmingham to Leeds) is scheduled to begin in 2023 and be operational by 2033.

This data is sourced from HS2 Ltd.
