Site Waste Management Plan

Blockade Demolition are responsible for the disposal of waste created by the demolition works carried out for this project and will do so in a responsible manner.

The aim of this report is to log and assist the creation of an environment where waste is reduced by the reuse, recycle and reduction.

Waste created on site will be separated into categories depending on site. Blockade services aim to recycle 95% of all waste produced on site,

Items reusable directly by the public will be taken by Blockade transport by fully loaded lorry, where possible, and Taken to a Architectural Salvage Yard operated by others.

Other categories will be collected by hauliers that specialise and prove their competence for the same

Blockade Demolition operate a fully licenced recycling / landfill facility. At Blockade recycling facility all material are processed into primary and secondary aggregates

All other waste material produced on site i.e. Wood, paper, cardboard, plastic, polythene, metal will be taken to other fully licenced facilities where they will be processed to produce secondary aggregates.

Hazardous waste will be registered to site, recorded (if necessary tests for contaminants will be carried out) and documented up to disposal point.

No waste containers will be removed unnecessarily if not full to maximum level, unless it's the final removal.

No containers will ever be loaded to cause labouring to vehicles and plant.

... personnel at Blockade Demolition are aware of the importance of implementing the reuse, recycle and reduction of waste.

Site Waste Management Plan

Project Name	Guysfield House
Project address/location	Willian Road, Letchworth, SG6 2AB
Main Contractor/Client	Guysfield House Limited
Person responsible for waste management on site (name and title) ie Principal	Steve Burrows
Person and Company completing this form (if different)	Neil Cook
Project Reference No	-
SWMP Planned by	Neil Cook
Report date	TBC
