SUMMARY

Oxford Archaeology was commissioned by Urban&Civic to prepare an archaeological desk-based assessment ahead of proposed works associated with residential and employment development on land to the north and east of Baldock, Hertfordshire (NGR TL 25341 34423). The purpose of this assessment is to identify heritage assets that may be affected by the development proposal.

Assessment of the historical and archaeological baseline data indicates that there is a high potential for the discovery of remains associated with prehistoric, Romano-British, medieval, post-medieval and modern activity across the Site. Where these are encountered, they are likely to relate to Neolithic to Bronze Age barrows in BA1, BA2 and BA10; Iron Age pits and agricultural activity in BA3; Late Iron Age to Romano-British settlement in Walls Field, and associated hinterland activity in BA1, BA3 and BA10; medieval settlement and associated activity in BA1 and Walls Field. The continued agricultural use of the Site means that there is a high chance of finding associated modern remains on the Site.

Following the geophysical survey and archaeological evaluation trenching that has taken place across the Site, and initial discussions with the Hertfordshire County Council Historic Environment Advisory Service, a programme of mitigatory archaeological open area excavation will be undertaken across the areas of archaeological interest that have been identified in order to fully excavated and record below-ground archaeological deposits that may be affected by the proposed development.

1 INTRODUCTION

- 1.1.1 Oxford Archaeology (OA) has been commissioned by Urban&Civic to prepare an archaeological desk-based assessment for land to the north of Baldock, henceforth known as 'the Site'. The Site is centred on NGR TL 25341 34423, and its location is shown on Figure 1.
- 1.1.2 This report has been prepared in accordance with the Chartered Institute for Archaeologists' *Code of Conduct* (CIfA 2022), *Standards and Guidance for Historic Environment Desk-based Assessments* (CIfA 2020), and *Planning Practice Guidance – Historic Environment*, published by the Ministry of Housing, Communities and Local Government (MHCLG 2019).

2 PROPOSED DEVELOPMENT

- 2.1.1 The proposed development is for residential and employment development of land allocated under the North Hertfordshire Local Plan (sites BA1, BA2, BA3 and BA10) for up to 3,200 dwellings and 16ha of employment land, alongside supporting infrastructure and open space. An additional two areas (Land West of North Road and Walls Field) are included within the design to be included as part of the green infrastructure.

3 LOCATION, TOPOGRAPHY AND GEOLOGY

- 3.1.1 The Site covers six sub-rectangular and irregularly shaped land parcels of predominantly agricultural land on the northern and eastern edges of the town of Baldock. It lies c. 20km to the north-west of Hertford and c. 21.5km to the south-east of Bedford. To the west is the North Road, while east and north lies further agricultural land, and the A505 forms the southern boundary. The nearest watercourse is the River Ivel, which lies c. 85m to the west of the Site, with a series of dry river valleys crossing the Site (Foster and Daykin 2025, 11).
- 3.1.2 The Site covers c. 220ha of undulating ground with a general increase as the areas move away from the existing town and from west to east. It rises from a low point of c. 58.5m OD along the former river valley in the north to a high point of c. 79.4m OD along the ridge in the northern half of BA1.
- 3.1.3 The bedrock geology of the area is mapped as chalk of the Holywell Nodular and New Pit Chalk Formations with areas of Melbourn Rock Member and Zig Zag Formation chalk in the north and north-west of BA1. Where superficial deposits have been identified overlying the bedrock, it includes; Head deposits of sand, silt, clay and gravel; Mid Pleistocene Glaciofluvial deposits of sand and gravel; and diamicton of the Lowestoft Formation; with alluvial fan deposits of sand and silt in the south, within Walls Field, BA2 and the southern end of BA3 (BGS 2025a). Boreholes (BGS 2025b) and the evaluation trenching across the Site have helped to clarify these deposits.

BA1

- 3.1.4 BA1 covers land that rises from c. 58.5m OD in the north-west and c. 61.1m in the south-west to c. 79.4m OD at the eastern end of a ridge that runs from

east to west to the north of its centre. The geology of this area comprises chalk of the Melbourn Rock Member, Zig Zag Chalk, Holywell Nodular and New Pit Chalk Formations overlain by bands of superficial clay, silt sand and gravel Head deposits, Glaciofluvial sand and gravel deposits and diamicton of the Lowestoft Formation. The topsoil is recorded to a depth of between 0.25m and 0.3m overlying a subsoil between 0.06m and 0.8m thick in the north and west, with a more variable depth of topsoil (between 0.2m and 0.4m) in the east (Oliveira 2025, 11). These both overlay the chalk, with the shallowest overburden towards the crest of the hill and the deeper areas including alluvial/colluvial deposits that filled the dry river valley (Foster 2024, 8);

BA2

- 3.1.5 This area covers land that slopes up from c. 74.4m OD in the north to c. 88.3m OD in the south. The geology comprises chalk of the Holywell Nodular and New Pit Chalk Formations overlain by a small area of Alluvial Fan Deposits of sand and silt in the north-west and Head clay, silt, sand and gravel in the south-east. The topsoil is recorded to a depth of between 0.35m and 0.63m overlying chalk deposits;

BA3 and Urban Open Land

- 3.1.6 This area covers slightly undulating land that rises from c. 71m OD in the south-west to c. 77.6m OD in the south-east and c. 73.7m OD in the centre, and to c. 75.9m OD in the north. The geology of the area comprises chalk of the Holywell and New Pit Formations overlain by bands of Head deposits of clay, silt, sand and gravel and Alluvial Fan deposits of sand and silt. The topsoil is recorded to a depth of between 0.2 and 0.75 overlying chalk in the south and north of the area that became clay, sand and gravel in the centre;

BA10

- 3.1.7 BA10 covers flat landscape that rises gently from c. 67.3m in the west to c. 80.6m in the east. The geology of this area comprises chalk of the Holywell Nodular and New Pit Chalk Formations overlain by two bands of Head clay, silt, sand and gravel. The topsoil is recorded to a depth of between 0.2m and 0.3m with between 0.05m and 0.3m of subsoil overlying the chalk geology and made ground (probably associated with Royston Road) immediately to the south of the area.; and

Walls Field

- 3.1.8 The Walls Field area forms a relatively flat area that slopes up from c. 67.3m OD in the west to c. 73m OD in the east. The geology of this area comprises chalk of the Holywell Nodular and New Pit Chalk Formations overlain by a band of Head clay, silt, sand and gravel and Alluvial Fan Deposits of sand and silt. The topsoil is recorded to a depth of 0.46m overlying chalk.

Land west of North Road

- 3.1.9 This area comprises a single grass field that slopes down from c. 63.9m OD in the south-east to c. 56.1m in the north-west. The geology of this area comprises Zig Zag Chalk Formation in the west and Melbourn Rock Member

in the east. Where the overlying superficial deposits are known in the west they comprise a clay, silt, sand and gravel Head deposit. The topsoil is recorded as between 0.6m and 0.65m deep, with it deeper and disturbed in the north. In the south, this overlies the chalk directly, while in the north, it overlies a silt deposit to a depth of 1.5m before chalk is reached.

4 AIMS AND OBJECTIVES

4.1.1 The purpose of this desk-based assessment is to determine as far as reasonably possible, from existing records and observations, an understanding of the historic environment within the Site and surrounding study area in order to:

- provide an assessment of the potential for archaeological remains to survive within the Site;
- assess the significance of known and predicted archaeological remains;
- assess the likely impacts of previous development upon the survival of any archaeological remains;
- assess the potential for impacts from the proposed development upon the surviving archaeological resource; and
- provide proposals for further evaluation, whether or not intrusive, where the nature, extent or significance of the archaeological resource is not sufficiently well defined.

5 PLANNING BACKGROUND

5.1 National heritage legislation

Ancient Monuments and Archaeological Areas Act 1979 (amended by the National Heritage Act 1983 and 2002)

5.1.1 The Ancient Monuments and Archaeological Areas Act (1979) specifies that an archaeological site or historic building of national importance can be designated as a scheduled monument and registered with the Department of Culture, Media and Sport (DCMS). Under the terms of the act any development that could affect a scheduled monument is subject to the granting of Scheduled Monument Consent. Historic England provides advice to DCMS regarding individual applications for scheduled monument consent, and also offers advice on the management of scheduled monuments

Planning (Listed Buildings and Conservation Areas) Act 1990

5.1.2 Works that affect listed buildings or structures and conservation areas are subject to additional controls administered by the Local Planning Authority (LPA) under the Planning (Listed Buildings and Conservation Areas) Act 1990 (amended by the Enterprise and Regulatory Reform Act 2013). Section 66 states that in considering development which affects a listed building or its setting the local planning authority shall have special regard to the desirability of preserving the building or its setting or any features of special

- architectural or historic interest which it possesses. In respect to conservation areas Section 72 states that special attention should be paid to the desirability of preserving or enhancing the character or appearance of that area.
- 5.1.3 Under the terms of the act a listed building may not be demolished, altered or extended in any manner which would affect its character as a building of special architectural or historic interest without Listed Building Consent being granted.
- 5.1.4 There are three grades of listing (in descending order):
- Grade I: Buildings of exceptional interest;
 - Grade II*: Particularly important buildings of more than special interest; and
 - Grade II: Buildings of special interest, warranting every effort to preserve.
- 5.1.5 Historic England is a statutory consultee in relation to works affecting Grade I/II* listed buildings.
- Hedgerow Regulations 1997, as amended by The Hedgerows (England) (Amendment) Regulations 2002 and The Management of Hedgerows (England) Regulations 2024*
- 5.1.6 These regulations apply to any hedgerow longer than 20m growing on or adjacent to common land, protected land, agricultural land or land used for forestry or keeping horses. It does not apply to hedgerows forming the boundary to dwellings. They define which hedgerows within England are identified as important and protected against removal and various other works. Heritage-specific criteria for precluding removal of a hedgerow includes if the hedge forms a historical parish or township boundary; it incorporates an archaeological feature which is a scheduled monument; or is part of a field system that existed before 1845; or an estate or manor boundary that existed before 1600.
- 5.1.7 The Archaeological, Historic, Wildlife and Landscape Criteria used to assess a hedgerow are presented within Schedule 1, Part II, Paragraphs 1 to 8 of the Regulations.
- 5.1.8 For this assessment, Paragraphs 1 to 5 include the pertinent details (and can be viewed at: <https://www.legislation.gov.uk/ukxi/1997/1160/schedule/1/made>). In summary, to be important in a historical/archaeological context, the hedgerow must have existed for 30 years or longer, and satisfy as least one of the following criteria:
1. *The hedgerow marks the boundary, or part of the boundary, of at least one historic parish or township; and for this purpose, "historic" means existing before 1850.*
 2. *The hedgerow incorporates an archaeological feature which is—*
 - (a) *included in the schedule of monuments compiled by the Secretary of State under section 1 (schedule of monuments) of the Ancient Monuments and Archaeological Areas Act 1979; or*

(b) recorded at the relevant date in a Sites and Monuments Record.

3. The hedgerow—

(a) is situated wholly or partly within an archaeological site included or recorded as mentioned in paragraph 2 or on land adjacent to and associated with such a site; and

(b) is associated with any monument or feature on that site.

4. The hedgerow—

(a) marks the boundary of a pre-1600 AD estate or manor recorded at the relevant date in a Sites and Monuments Record or in a document held at that date at a Record Office; or

(b) is visibly related to any building or other feature of such an estate or manor.

5. The hedgerow—

(a) is recorded in a document held at the relevant date at a Record Office as an integral part of a field system pre-dating the Inclosure Acts; or

(b) is part of, or visibly related to, any building or other feature associated with such a system, and that system—

(i) is substantially complete; or

(ii) is of a pattern which is recorded in a document prepared before the relevant date by a local planning authority, within the meaning of the 1990 Act, for the purposes of development control within the authority's area, as a key landscape characteristic.

National Planning Policy

5.1.9 Section 16 of National Planning Policy Framework (NPPF) as issued on 7 February 2025 sets out the Government's planning policies in relation to the conservation and enhancement of the historic environment (MHCLG 2025).

5.1.10 Paragraphs 207 and 208 state:

207. In determining applications, local planning authorities should require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets' importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation.

208. Local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset's conservation and any aspect of the proposal.

5.1.11 Paragraphs 212 and 213 state:

212. When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation (and the more important the asset, the greater the weight should be). This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance.

213. Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification. Substantial harm to or loss of:

a) grade II listed buildings, or grade II registered parks or gardens, should be exceptional;

b) assets of the highest significance, notably scheduled monuments, protected wreck sites, registered battlefields, grade I and II listed buildings, grade I and II* registered parks and gardens, and World Heritage Sites, should be wholly exceptional (Non-designated heritage assets of archaeological interest, which are demonstrably of equivalent significance to scheduled monuments, should be considered subject to the policies for designated heritage assets).*

5.1.12 Paragraphs 214, 215 and 216 state:

214. Where a proposed development will lead to substantial harm to (or total loss of significance of) a designated heritage asset, local planning authorities should refuse consent, unless it can be demonstrated that the substantial harm or total loss is necessary to achieve substantial public benefits that outweigh that harm or loss, or all of the following apply:

a) the nature of the heritage asset prevents all reasonable uses of the site; and

b) no viable use of the heritage asset itself can be found in the medium term through appropriate marketing that will enable its conservation; and

c) conservation by grant-funding or some form of not for profit, charitable or public ownership is demonstrably not possible; and

d) the harm or loss is outweighed by the benefit of bringing the site back into use.

215. Where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be

weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use.

216. The effect of an application on the significance of a non-designated heritage asset should be taken into account in determining the application. In weighing applications that directly or indirectly affect non-designated heritage assets, a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset.

5.1.13 Paragraph 218 states:

Local planning authorities should require developers to record and advance understanding of the significance of any heritage assets to be lost (wholly or in part) in a manner proportionate to their importance and the impact, and to make this evidence (and any archive generated) publicly accessible (copies of evidence should be deposited with the relevant historic environment record, and any archives with a local museum or other public depository). However, the ability to record evidence of our past should not be a factor in deciding whether such loss should be permitted.

5.1.14 Paragraphs 219 and 220 state:

5.1.15 *219. Local planning authorities should look for opportunities for new development within Conservation Areas and World Heritage Sites, and within the setting of heritage assets, to enhance or better reveal their significance. Proposals that preserve those elements of the setting that make a positive contribution to the asset (or which better reveal its significance) should be treated favourably.*

5.1.16 *220. Not all elements of a Conservation Area or World Heritage Site will necessarily contribute to its significance. Loss of a building (or other element) which makes a positive contribution to the significance of the Conservation Area or World Heritage Site should be treated either as substantial harm under paragraph 214 or less than substantial harm under paragraph 215, as appropriate, taking into account the relative significance of the element affected and its contribution to the significance of the Conservation Area or World Heritage Site as a whole.*

5.2 Local Planning Policy

5.2.1 The Site falls within three parishes (Baldock, Bygrave and Clothall) within the North Hertfordshire District of the County of Hertfordshire. The North Hertfordshire Local Plan (North Herts Council 2022) was adopted on 8 November 2022. Five policies within the plan relate to heritage assets:

5.2.2 *Policy HE1: Designated heritage assets of the local plan states that:*

Planning applications relating to Designated heritage Assets or their setting shall be accompanied by a Heritage Assessment/Justification Statement that:

i. Assesses the significance of heritage assets, including their setting;

ii. Justifies and details the impacts of any proposal upon the significance of the designated heritage asset(s); and

iii. Informs any necessary measures to minimise or mitigate against any identified harms.

Planning permission for development proposals affecting Designated Heritage Assets or their setting will be granted where they (as applicable):

a) Enable the heritage asset to be used in a manner that secures its conservation and preserves its significance;

b) Incorporate a palette of materials that make a positive contribution to local character or distinctiveness, where it is appropriate and justified; and

c) Will lead to less than substantial harm to the significance of the designated heritage asset, and this harm is outweighed by the public benefits of the development, including securing the asset's optimum viable use.

Where substantial harm to, or loss of significance, of a designated heritage asset is proposed the Council shall refuse consent unless it can be demonstrated that the scheme is necessary to deliver considerable public benefits that outweigh the harm or loss.

5.2.3 *Policy HE2: Heritage at risk states;*

Planning permission will be granted for proposals that seek to conserve or provide new uses for designated heritage assets identified on the national register, or the Council's 'At Risk' register maintained by the Council, that are justified and appropriate to the significance of the asset to return a heritage asset to beneficial use.

Proposals that harm the significance of heritage assets included on national and local registers will be resisted unless the need for, and the benefits of, the development in that location clearly outweigh that harm, taking account of the asset's significance and importance, and all feasible solutions to avoid and mitigate that harm have been fully assessed.

5.2.4 *Policy HE3: Non-designated heritage assets states that:*

Permission for a proposal that would result in harm to, or the loss of, a non-designated heritage asset will only be granted provided that a balanced judgement has been made that assesses the scale of harm to, or loss of significance of the non-designated asset and, where the proposal results in the loss of a non-designated heritage asset:

a) The replacement building contributes to preserving the local character and distinctiveness of the area; and

b) Where the asset is located in a conservation area a continuous contract for the demolition and redevelopment of the site has been secured, unless there are justifiable grounds for not developing the site.

5.2.5 *Policy HE4: Archaeology states that:*

Permission for development proposals affecting heritage assets with archaeological interest will be granted provided that:

a) Developers submit an appropriate desk-based assessment and, where justified, an archaeological field evaluation.

b) It is demonstrated how archaeological remains will be preserved and incorporated into the layout of that development, if in situ preservation of important archaeological remains is considered preferable; and

c) Where the loss of the whole or a material part of important archaeological remains is justified, appropriate conditions are applied to ensure that the archaeological recording, reporting, publication and archiving of the results of such archaeological work is undertaken before it is damaged or lost.

Where archaeological sites have been assessed to meet the criteria for inclusion on adopted registers or maps of locally important heritage assets these shall be treated in the same way as archaeology areas and areas of archaeological significance.

Areas of as yet, unknown archaeology may be identified during research, or through the planning or plan making process. These sites or areas should be treated in the same way as archaeology areas and areas of archaeological significance.

5.2.6 *Policy SP13: Historic environment states that:*

The Council will balance the need for growth with the proper protection and enhancement of the historic environment. When considering the impact of a proposed development on the significance of a designated heritage asset, great weight will be given to the asset's conservation and the management of its setting. We will pursue a positive strategy for the conservation and enjoyment of the historic environment through:

- a) Maintaining a strong presumption in favour of the retention, preservation and enhancement of heritage assets and their setting according to their significance;
- b) Identifying sites on the national register of Heritage at Risk or on the Council's 'At Risk' register;
- c) Periodic reviews of Conservation Areas and other locally designated assets; and
- d) Publication of detailed guidance.

5.2.7 The Site covers three areas allocated within the local plan as housing sites (BA1-3) and one as an employment site (BA10), with these policies including protection of heritage assets.

5.2.8 *Policy SP14: Site BA1 – North of Baldock, states that heritage assets and their settings should be treated sensitively, including:*

- i. an access solution from the A507 North Road which satisfactorily addresses potential impacts;*
- ii. retaining framed views of St Mary's Church from within and beyond the site; and*
- iii. using the location of areas of archaeological significance to inform a site-wide green infrastructure strategy.*
- iv. Ivel Springs Scheduled Ancient Monument*

- 5.2.9 Policies BA2: Land south-west of Clothall Road (Clothall parish) and BA3: Land south of Clothall Common (Clothall parish) state that a heritage impact assessment (including assessment of significance) should be carried out and that sensitive design should be used to ensure appropriate protection of adjacent the Scheduled Ancient Monument; and that archaeological survey should be completed prior to development.
- 5.2.10 Policy BA10: Royston Road states that the framed views from St Mary's Church from within and beyond the Site should be retained; and that archaeological survey should be completed prior to development.
- 5.2.11 Despite the proximity of the scheduled monuments, Paragraph 13.29 states that:
- Heritage and archaeology are key considerations in Baldock owing to the rich history of the settlement. It is considered that sites closest to the scheduled ancient monuments (namely BA2, BA3, BA5 and BA11) can avoid substantial harm to the significance of this asset. Sensitive design will be a critical factor in the development of these sites.*
- 5.2.12 The Baldock, Bygrave and Clothall Neighbourhood Plan (Baldock, Bygrave and Clothall Planning Group, 2021) was made on 29 June 2021. Within this, Policy G2 Strategic green space states that:
- Proposals that would improve the visual or recreational value of this land will be supported, particularly if they form part of a comprehensive strategy for improved public access and the conservation and interpretation of the scheduled area. Any such proposals should be informed by community engagement; while any proposals affecting Walls Field and its setting should also conserve, and where possible enhance, its value as a scheduled monument.*
- 5.2.13 With regard to the Baldock conservation areas, Policy G5 Baldock conservation area identifies a series of key views looking towards the church and states that:
- Development within Baldock conservation area, or which affects its setting, should conserve or enhance its character and appearance by reflecting the following principles:*
- a) maintain and reflect the historic pattern of streets, alleys and medieval burgage plots;*
 - b) maintain the pattern of continuous built frontages to streets, with mainly wide-fronted buildings and minimal set-backs from the pavement, punctuated by frequent gaps giving access to rear yards;*
 - c) avoid obstructing key views of St Mary's Church tower obtained from the High Street, Whitehorse Street, Sun Street, Church Street, Brewery Lane, West Avenue, Letchworth Road and Park Street;*
 - d) use building forms and materials that are characteristic of the conservation area (including their contemporary interpretation) – which comprises mainly buildings constructed or re-fronted in classical style during the 18th century, interspersed with some medieval and more recent buildings; a prevailing height of two-three storeys; and a limited palette of*

materials (mainly red/orange brick, pale render; plain clay tiles and black weatherboarding for subsidiary buildings in rear yards);

e) retain, and where possible restore, historic features such as original fenestration, boundary walls and chimneys; and

f) use shopfront designs and signage that reflect the style of the building and the character of the wider conservation area.

- 5.2.14 Policy G6 Local heritage assets identifies the designated and non-designated heritage assets of Baldock and states that:

Development proposals that would affect the character or setting of a heritage asset of identified local importance should:

a) seek to conserve or enhance those qualities and features that make it of value; and

b) be supported by an assessment of the potential impact on these qualities/features, commensurate with the scale of the works and their likely significance for the asset's value.

- 5.2.15 Point e of Policy E5 Development north of the railway also states that development within area BA 1 should:

retain and incorporate existing landscape and built features that contribute to the site's history and character, including Bygrave Road/Ashwell Road and trees and hedgerows (while safeguarding the habitat value of the Bygrave Road local wildlife site)

- 5.2.16 The Register of Buildings of Local Importance in Baldock (North Hertfordshire District Council 2003a) provides details of non-designated buildings in Baldock that are important. There are no additional controls on works affecting these buildings, but they may be considered in planning applications. Most of these are viewed as locally important due to their local architectural interest and local historical interest, with some also acting as focal points within the town and contributing to the character of the conservation area.

6 METHODOLOGY

6.1 Scope and Sources Consulted

- 6.1.1 A 1km search area (hereafter the study area) has been used to identify designated and non-designated heritage assets which could be affected by the proposed development. The assessment was informed through both a desk-based review and a site visit.

- 6.1.2 The following sources were consulted to inform this assessment:

- the National Heritage List for England (NHLE) for designated heritage assets;
- Hertfordshire Historic Environment Record (HHER, search 046.25, dated 11 July 2025) for non-designated heritage assets and archaeological events;

- Hertfordshire Archives and Local Studies (HALS) for historical maps and manuscripts;
- the National Library of Scotland for historical Ordnance Survey (OS) maps;
- aerial Photographs as held by the Cambridge University Collection of Aerial Photography (CUCAP), Historic England and the National Collection of Aerial Photography;
- LiDAR data as held by the Environment Agency;
- geotechnical data as held by the British Geological Survey; and
- other relevant primary and secondary sources including published and unpublished works as held by OA and relevant libraries.

6.1.3 For ease of reference each heritage asset identified has been allocated a unique OA number. This is included in the heritage gazetteer provided in Appendix A, referred to in the text where relevant and marked on Figures 2-17. A full list of sources consulted can be found in Appendix B.

6.2 Assumptions and Limitations

6.2.1 Data used to compile this report consists of secondary information derived from a variety of sources. The assumption is made that this data is reasonably accurate.

6.2.2 The records held by the HHER are not a record of all surviving heritage assets, but a record of the discovery of a wide range of archaeological and historical components of the historic environment. The information held within it is not complete and does not preclude the subsequent discovery of further heritage assets that are, at present, unknown.

7 HISTORIC AND ARCHAEOLOGICAL BASELINE

7.1 Introduction

7.1.1 The nature of the archaeological resource within the Site and the surrounding study area is discussed by period below. The locations of designated sites are marked upon Figures 2-4, the locations of previous archaeological events are shown on Figures 5-7 and non-designated heritage assets are shown on Figures 8-17. Further details of all sites are provided in Appendix A.

7.2 Designated Heritage Assets (Figs 2-4)

Conservation areas (Fig. 2)

7.2.1 Two conservation areas have been identified within the study area:

- The Norton conservation area (OA 1), c. 770m to the west of area BA1, was designated in 1969 with its boundary amended in 1979. It focuses on the area around the church, the public house and the historic buildings in the core of the village, as well as two large open green spaces (Constable and Kerr 2019, 4). Although the village core lies outside the study area, a large area of green open space on the north-

eastern edge of the village centre is within the study area. This incorporates the well-preserved earthworks associated with a possible late medieval manorial site (OA 886; Fig. 14).

- Baldock conservation area (OA 2), c. 190m to the west of the Walls Field area of the Site. This covers the town centre and older parts of the town with a high number of buildings of good architectural quality and historic interest (North Hertfordshire District Council 2003b, 11, 19). This incorporates most of the listed buildings within the study area and maintains the late medieval layout of the town as well as its relationship with the ancient trackways, historic roads and Romano-British settlement (North Hertfordshire District Council 2003, 34).

Scheduled monuments (Fig. 2)

7.2.2 A total of four scheduled monuments lie within the study area:

- The Barrow, south of Radwell (OA 3) is the earthwork of a Late Neolithic to Late Bronze Age bowl barrow c. 810m to the north-west of area BA1. It survives as a hemispherical earth mound measuring between 0.5m and 0.7m high and c. 12m in diameter, that is surrounded by a shallow ditch that measures c. 2.5m across and 0.10m deep. This is of archaeological significance.
- The site of Radwell Roman Villa (OA 4) lies c. 770m to the north-west of area BA1. This is the site of the buried remains of a villa complex visible as cropmarks and soilmarks from the air, alongside the buried remains of a substantial potentially Iron Age ditch and bank and late medieval field system that continue outside the scheduled area. Despite degradation by ploughing, substantial remains are thought to survive beneath the surface, including the foundations of the main villa building, a bath house suite, ancillary structures and boundary ditches. This is of archaeological significance with part of the site subject to waterlogging from the River Ivel.
- The Settlement Site south of Blackhorse Farm (OA 5) lies c. 17m to the west of area BA1, on the opposite side of A507 North Road. This covers a multiphase area of archaeological activity indicating settlement from the Late Iron Age onwards. This is of archaeological interest.
- The Romano-British small town and Late Iron Age settlement at Baldock (OA 6) lies within the Walls Field area of the Site and extends to its north-west and south-west. This comprises the buried archaeological remains of a settlement that had been established by the 1st century BC. This includes an area of Late Iron Age burials, roundhouses, pits, wells and enclosures that may have been associated with the tribal centre of the *Catuvellauni*. Settlement here was expanded and became denser through the Romano-British period, including metalled streets, a small Romano-Celtic temple, houses and other structures built over the pre-Romano-British paddocks and enclosures. The full extent of the settlement is not known. This is of archaeological interest but is on the Heritage at Risk

Register as it is in a generally unsatisfactory condition with major localised problems and is principally vulnerable from arable ploughing causing damage to the archaeological evidence that is its principal heritage interest.

Listed buildings (Figs 3-4)

7.2.3 A total of 106 listed buildings have been identified within the study area, including one of grade I status, eight of grade II* status and 97 of grade II status. The closest of these are of grade II status (OA 19) c. 30m to the west of area BA1.

- The grade I listed Church of St Mary (OA 7; Fig. 3) lies c. 450m to the north-west of the Walls Field area of the Site, within the Baldock conservation area. The church building includes elements surviving from the 13th, 14th and 15th centuries as well as 18th and 19th century additions.
- The grade II* listed buildings (Fig. 3), lie within Baldock conservation area, all at least 270m from the Site. These mostly comprise 18th century houses (OA 8 and 11-15) associated with the development of Baldock, although the earliest of these is a 16th century or earlier house (OA 9) and the latest the 19th century rectory associated with the Church of St Mary (OA 10). These are of significance for their architectural and group values.
- The grade II listed buildings (Fig. 4) mostly lie along the four streets that radiate out from the Town Hall and within the Baldock conservation area and relate to 16th to 20th century house, public houses and churches, but also include the churchyard wall of St Mary's Church (OA 50), the 17th century almshouses (OA 99) and a K6 telephone kiosk (OA 92). Four of these grade II listed buildings lie outside the conservation area: the 17th century The Compasses Public House (OA 19) and 18th century farmhouse (OA 18) directly opposite area BA1, with two 18th century cottages that have been combined into a single house with 20th century extensions (OA 16) and much altered late 17th century house (OA 17) a further c. 215m to the north. Most of these have been designated for their architectural and group values, although the 19th century Tomb of William Clarkson (OA 37) has been included for William Clarkson's historical association with the abolition of slavery.

7.3 Previous Archaeological Investigations (Figs 5-8)

7.3.1 A total of 316 archaeological investigations have been carried out within the study area, including 31 archaeological surveys (11 building assessments, 10 fieldwalking, 10 geophysical surveys; Fig. 5), 140 intrusive investigations (Fig. 6) and 145 aerial photographs associated with cropmarks (Fig. 7). Of these intrusive investigations, 56 were archaeological monitoring, 64 archaeological trial trench evaluations and 20 archaeological excavations.

7.3.2 Within the areas of the Site, these include a geophysical survey across BA1 (Davies 2016) and archaeological trial trench evaluations that covered the south-west of BA1 in 2008 (OA 212; Newbould 2008a), BA3 in 2008 (OA 269;

Newbould 2008b), BA10 in 2009 (OA 267; Newbould 2009), BA1 in 2016 (OA 213; Finn, C. and Muldowney 2017), BA1 in 2024 (Oliveira 2025) and BA1, BA2, BA3 and BA10 in 2024 (Foster and Daykin 2025)

- 7.3.3 In general, these identified 12 areas of possible or probable Late Neolithic to Bronze Age barrows; activity associated with Late Iron Age to Romano-British settlement and agricultural practices; and an area of late medieval settlement and industrial activity. Although spread across the proposed development area, they form 12 pockets of concentrated activity (Fig. 8):
- Site I: Late Iron Age to Early Romano-British roadside activity, including quarrying activity, This area is of regional importance that shows some evidence of the development of Ermine Street and the potential for a pre-cursor road alignment.
 - Site II: an undated enclosure, believed to be Romano-British in date due to its square shape, containing internal pits. This is viewed as of local archaeological importance and possibly indicates the Late Iron Age origins associated with agricultural use of the landscape.
 - Site III: included two Bronze Age round barrows (RB1 and RB2) that appear to have been partially disturbed by ploughing between the two phases of evaluation (between 2016 and 2024). The eastern of the barrows had a cremation at the centre of the barrow and an Anglo-Saxon inhumation burial cut into it. A Late Iron Age to Romano-British enclosure associated with agricultural activity surrounded the barrows. These are viewed as of local to regional archaeological importance.
 - Site IV: an undated rectilinear enclosure that is again thought to be Romano-British in date based on its morphology. Pits within the enclosed space may have been associated with the enclosure, or may represent later activity. This is viewed as of local archaeological importance and related to the agricultural use of the landscape.
 - Site V: an area of Romano-British agricultural activity (enclosures and field systems) that may have had Late Iron Age beginnings, as well as late medieval timber buildings and industrial activity. This area has been identified as of local to regional archaeological importance associated with the agricultural use of the landscape and late medieval settlement and industrial activity.
 - Site VI: An Iron Age boundary ditch that follows the contours of the hill adjacent to the former course of the Winterbourne and extended between Sites VIII and IX to its east. This may have been associated with small enclosures to its south that utilised it as their northern boundary. Its alignment is perpendicular to Ermine Street and may indicate an earlier trackway. It also follows the same axis as the later Romano-British enclosures, which may have been established to utilise the contours of the area. This is seen to be of local to regional archaeological importance and associated with Iron Age land divisions continuing to influence the landscape into the post-medieval period.

- Site VII: A group of five round-barrows (RB3-RB7) that appear to have seen plough disturbance, with one (RB3) clearly affected by land drains. Although no burial remains were identified, the variations in their sizes and ditch fills suggest that it was a multiphase barrow cemetery. These are viewed as of regional archaeological importance due to their association with Bronze Age barrow cemeteries.
- Site VIII: an area of Late Iron Age and Romano-British enclosures and settlement, including evidence of societal transition between the two periods. This was a domestic and pastoral area established c. 100 BC and although it peaked during the earlier part of the Romano-British period continued throughout it. It consisted of a series of multi-phase Late Iron Age settlement enclosures that became more rectilinear before becoming surrounded by a rectangular enclosure that suggests Romano-British settlement dating to the 1st or 2nd century AD. This settlement area is considered to be associated with the field systems and enclosures identified in Sites II, III, IV, V and IX to its east. This area is considered to be of regional archaeological importance due to the continued occupation from the Late Iron Age to the Romano-British period and the evidence this suggests of romanisation.
- Site IX: an area comprising evidence of three Bronze Age round barrows (RB8-RB10) and Romano-British enclosures and field systems. The Bronze Age barrows showed indications of plough damage. The Romano-British enclosures were aligned along a linear ditch near the top of the hillside in a 'clothes-line' style enclosure pattern and were probably of an agricultural nature, possibly with farmsteads within them or as field systems or paddocks. Based on the denuded round barrows and later Late Iron Age/ Romano-British enclosure system associated with agriculture, this area is considered to be of local to regional archaeological importance.
- Site X: covers part of an Iron Age pit alignment that extends to the north and south of the proposed development. Where this has been investigated, it is indicated as having been constructed c. 200 BC and may have marked a boundary between Iron Age tribes. This is viewed as being of regional archaeological importance as it extends through the landscape around Baldock.
- Site XI: an area of Late Iron Age to Romano-British settlement and agricultural enclosures and field systems. Part of this system superseded the pit alignment of Site X and may have been associated with the designated Romano-British settlement at Walls Field to its north (OA 6). Smaller enclosures within this area have been interpreted as possible livestock enclosures and the area also includes an inhumation burial that is thought to be associated with the Wallington Road cemetery c. 70m to its west (OA 646). This area is viewed as of local archaeological importance with the activity representing continuity in the agricultural activity of the area between the Late Iron Age and Romano-British periods and the potential for further Romano-British burials in the northern part

- Site XII: an area including possible evidence of round barrows and indicating the continuation of the Ermine Street alignment to the south of the town, possibly including an earlier routeway pre-dating the Roman road. This area is considered to be of regional archaeological importance due to the evidence of the development of Ermine Street and the potential for a pre-cursor road alignment

7.4 Non-designated heritage assets (Figs 9-18)

Prehistoric (c. 500,000 BP – AD 43) (Figs 9-12)

- 7.4.1 The Site lies within the prehistoric settlement and funerary landscape of North Hertfordshire that is concentrated on the elevated ground overlooking river valleys and has been occupied since the prehistoric period. While the earliest evidence within the study area relates to a Palaeolithic flint implement (OA 428) recovered from within the Walls Field area of the Site, the earliest archaeological features date to the Neolithic period (see Paragraph 7.4.3 below).
- 7.4.2 The route of the Icknield Way (OA 453), a prehistoric routeway that varied in its exact course depending on the season, lies across the southern part of BA1 of the Site. At least parts of this continued in use through the Romano-British period. Traces of a major boundary alongside its route (OA 644) survived as a landscape feature into the 19th century, but were not prominent at the time of the site visit. A prehistoric ditch system that may have been associated with the Icknield Way or an Iron Age tribal boundary (OA 695) was identified c. 800m to the east of BA1.
- 7.4.3 As with the Palaeolithic, evidence of the Mesolithic period within the study area is limited to finds of flint implements. These comprise flints recovered alongside Early Neolithic flints during fieldwalking (OA 429) c. 940m to the south of the Site.
- 7.4.4 There is a significant increase in evidence dating to the Neolithic period within the study area, with most of this relating to funerary or monumental activity. This includes a Neolithic square barrow with burial (OA 476) adjacent to the eastern edge of BA3; a double-ditched circular henge that included midden-type deposits (OA 431) c. 920m to the west of the Site; and a cursus monument (OA 441) c. 475m to the west. Neolithic pits have also been encountered within the centre of BA1 (OA 451), the southern end of BA3 (OA 468), as well as adjacent to the eastern boundary of BA2 (OA 464 and 467) and BA3 (OA 469 and 471) and c. 115m to the north of Walls Field (OA 454). In addition to these, a Neolithic or Early Bronze Age flint (OA 466) has been recovered from the north-east of BA1; as well as Neolithic flint implements c. 890m to the east (OA 505) and c. 800m to the west (OA 444) of the Site, and a Late Neolithic flint scatter was recovered alongside a polished bone/horn artefact (OA 694) c. 900m to the west.
- 7.4.5 From the Late Neolithic period, activity within the study area became more intensive with a significant quantity of evidence relating to Bronze Age funerary activity, especially barrow cemeteries identified and/or recorded as cropmarks in aerial photographs, as well as during the geophysical survey (Davies 2016) and trial trench evaluations (Finn and Muldowney 2017) within

- the Site and for the A505 Bypass to its east (Thorpe *et al.* 2003). These include evidence of ploughed-out Late Neolithic to Earlier Bronze round barrows and possible barrows that formed the funerary landscape of the area. Clusters of these were identified in the south of BA1 (OA 455, 458-463, 465 and 512); a grouping in the east of BA1 (OA 473, 477, 478, 480 and 481), adjacent to BA1 (OA 488) and within the north-east of BA10 (OA 486); clustered by the south-east corner of BA10 (OA 491, 500, and 516-522); grouped to the east of BA10 (OA 493, 496 and 497) and to the west of BA1 (OA 432-439, 442 and 443). In addition to these barrow cemeteries, further barrows have been identified in the west of BA1 (OA 449 and 450), within BA2 (OA 456 and 457) and BA3 (OA 470), to the north-west (OA 430), north (OA 445-448), north-east (OA 485) and east (OA 472, 489, 498, 501-503 and 506) of BA1, to the south (OA 452) and south-east (OA 482) of BA2, and spread across the fields to the east of BA3 (OA 474, 475, 479, 483, 484, 487, 490, 492, 494, 495, 499 and 504). Some of these remained visible in the landscape, with a secondary burial of Anglo-Saxon date excavated from one barrow (OA 450) in the west of BA1. Further funerary evidence includes two cremation burials c. 360m (OA 508) and c. 850m (OA 507) to the west of BA2.
- 7.4.6 In addition to the funerary evidence, the presence of occupation is suggested through a post-built structure (OA 515) c. 40m to the east of BA3, a ditch containing a large, stratified group of pottery (OA 511) c. 970m to the south of BA2, and pits towards the south of BA3 (OA 513) and c. 60m to the north of Walls Field (OA 509). Additional finds of Bronze Age date include a flint scraper (OA 510) recovered from the south-west of the Walls Field area.
- 7.4.7 Earlier Iron Age activity includes indications of settlement in the area with a possible roundhouse (OA 693) identified through cropmarks c. 700m to the east of BA1. In addition to this, evidence of the earlier Iron Age utilisation of the landscape includes a boundary ditch that contained Middle Iron Age pottery (OA 645) that extended north-east to south-west across the south-eastern corner of BA2, with a ditch system (OA 441) also identified c. 475m to the west of BA1. This use of the landscape also includes a pit alignment across the southern part of BA3 (OA 649) that extended to the east of the area (OA 665) and that may have extended to the west (OA 552 and 643) where a pit alignment has been identified as Late Iron Age and possibly formed a boundary with posts within the pits. A pit group (OA 652) has also been identified in the south of BA3, with a further pit (OA 654) by its south-east corner. A further pit alignment (OA 535) that was aligned perpendicular to the Icknield Way c. 170m to the west of BA1.
- 7.4.8 Although most of the evidence of Iron Age activity dates from the later part of the period, some of this began during the Middle Iron Age with a possible mortuary enclosure (OA 559) identified within a seasonally waterlogged area c. 75m to the north-west of Walls Field.
- 7.4.9 The Late Iron Age saw the beginnings of an area of multiphase occupation (OA 526; OA 5; Fig. 2) c. 20m to the west of BA2. Iron Age activity within this area, including pits, postholes, ditches and a trackway, continued in use into the Romano-British period, and later saw an Anglo-Saxon sunken featured building with associated postholes, as well as late medieval pits, ditches and a cobbled trackway. Two additional areas of Late Iron Age to Early Romano-

- British settlement complexes are indicated in the west of Walls Field (OA mht8) and with a large enclosure complex that spanned at least three phases of occupation alongside Icknield Way (OA 662-664, 667, 675 and 1115; Foster and Daykin 2025, 11) in the south-east of BA1.
- 7.4.10 The settlement area in Walls Field formed the 1st century BC beginnings of the Romano-British settlement, with ditches (OA 637) identified, and pottery (OA 572 and 638) recovered from this area. This area of activity may have extended to the south-west with pits, ditches, postholes and a well (OA 540, 541 and 562); as well as to the north-west, where burial enclosures and associated cremation and inhumation burials (OA 544, 567, 550, 555, 558, 560, 569, 571, 573 and 574) and ditch system (OA 533, 534, 536, 539 and 570) and pits (OA 549) have been identified in the area between BA1 and Walls Field. The significance of this settlement may be indicated through a rich cremation burial (OA 547) recovered c. 150m to the south of Walls Field. This burial had rich grave goods that included a bronze cauldron, a pair of iron fire dogs, two bronze dishes, two wooden buckets with bronze fittings, an amphora and pig bones, and may have been that of a chieftain. In addition to this, an Iron Age Greek-type bronze helmet (OA 564) and a coin (OA 565) have been recovered from the north-west of Walls Field, and a brooch (OA 639) in the east of Walls Field.
- 7.4.11 In addition to the funerary activity identified close to the Late Iron Age settlement, a Late Iron Age to Early Romano-British inhumation burial (OA 667) was identified in the east of BA1; an area of cremation and inhumation burials (OA 546) has been identified c. 130m to the east of BA10; a cremation (OA 548) c. 280m to the west of BA2; a cremation and inhumation cemetery (OA 646) c. 65m to the west of BA3; and four burial vessels (OA 529) c. 500m to the south-west of BA1.
- 7.4.12 Further later Iron Age and Romano-British occupation of the area can be seen with a burial enclosure (OA 640) and pottery and a scatter of features (OA 641) dated between the 1st to 3rd centuries AD in the area c. 950m to the south of BA2.
- 7.4.13 Beyond this, the agricultural nature of the area is emphasised through the presence of boundary ditches and pits (OA 527) and a field system (OA 545) in the west of BA1; a field system (OA 642) in the north of BA1; enclosures (OA 674, 673) and a field system (OA 677) in the east of BA1 and a ditch system (OA 570) c. 70m to the south of BA1; extensive field system to the east of BA1 (OA 505); a field system in the centre (OA 661) and east (OA 672) of BA10; parallel ditches (OA 683) c. 125m to the east of BA10; enclosures (OA 659) in the area to the east of BA2, an enclosure (OA 568) to the west of BA2; a Late Iron Age to Early Romano-British enclosure (OA 657) in the south of BA3 and boundary ditch (OA 660) and stock enclosures (OA 656, 651) in the middle of BA3. Areas of quarrying have also been identified in the east of BA 10 (OA 676) and in the area between BA2 and BA3 (OA 648).
- 7.4.14 Additional evidence of Iron Age activity within the study area relates to find spots of coins (OA 566) in the centre of BA1, as well as a gold coin c. 710m to the north-east of BA1, and an Early to Middle Iron Age spearhead (OA 543) c. 420m to the west of BA2.

Romano-British (c. AD 43-410) (Figs 13-14)

- 7.4.15 The Romano-British period saw extensive anthropogenic evidence within the study area with a significant concentration in the Walls Field area and to its north-west. This formed an area of settlement concentrated around the scheduled area (OA 6; Fig. 2). This covered c. 20ha and extended across the Walls Field area up to the line of Icknield Way, c. 290m to the north-west and on both sides of the Roman road (OA 697) whose route is followed by the North Road, north-west to Godmanchester and south-east to Braughing, along the western edges of BA1 and BA3 and eastern edge of BA2. Activity associated with this settlement, and surrounding the Walls Field area, included walls (OA 760), building foundations (OA 719), a possible cellar (OA 728), corn-driers (OA 760 and 786), an oven (OA 738), ditches and pits (OA 551, 556, 557, 707, 710, 715, 716, 718, 725, 729, 731, 733, 740, 760, 767 and 776), wells (OA 715, 722, 725, 768, 778 and 793); and a soil horizon (OA 756). This settlement continued in use into the Late Romano-British and post-Romano-British period, with evidence of a house that included a 5th-century coin in the foundations (OA 746).
- 7.4.16 The road (OA 875) surrounded by this settlement remained in use until the 16th century, with parts of its route surviving as rights of way, field boundaries and parish boundaries. Additional roads extend from this main route, including one extending south-west to Rush Green (OA 696), which although its course at its northern end is uncertain, joined the Godmanchester-Braughing road to the south of the Walls Field area. The Icknield Way also continued to be used, with its Romano-British course (OA 754 and 769) indicated c. 120m to the south of BA 1. While an additional track (OA 553) has been identified connecting to the Icknield Way, additional trackways have been identified c. 70m to the north-west of Walls Field (OA 765) and c. 170m to the south-east of BA2 (OA 653).
- 7.4.17 Beyond the town, Romano-British settlement within the study area included Radwell villa (OA 698, OA 4, Fig. 2) c. 960m to the north-west of the Site. This had ditches (OA 702) and pits (OA 701) to its east and south that may have been part of its hinterland.
- 7.4.18 Associated with the settlement of the area, funerary evidence within the study area is extensive and includes a Romano-Celtic temple and other buildings, metalled road and walled enclosures (OA 741) visible as cropmarks within the scheduled area c. 35m to the west of the Walls Field area. To the north, a possible temple and its enclosure (OA 790) have been identified with the associated pits and inhumation burial indicating that this activity dated to the late 2nd century AD and continued to be used through the 3rd century, with a large collection of 3rd century AD spearheads recovered. In addition to these, cremation and inhumation cemeteries and burials have been identified in the south-east of Walls Field (OA 789 and 791), with a further inhumation (OA 770) c. 50m to its south and further inhumation and cremation cemeteries at its north-west end, on both sides of the Roman road, but concentrated to its east (OA 706, 712, 713, 742, 749, 755, 766, 773-775, 777 and 787), but also to the south of the settlement, to the west of BA2 (OA 721, 745, 750, 759 and 772); between BA3 and Walls Field (OA 794). Additional Romano-British human remains have also been identified c. 435m to the

north-west of Walls Field (OA 714), c. 500m to the south of BA2 (OA 1083) and c. 100m to the east of BA2 (OA 812).

- 7.4.19 On the edge of the settlement, c. 235m to the north of Walls Field, the settlement area, a 1st-2nd century AD farmstead that incorporated a trackway, boundary ditches, enclosures, a granary and pits (OA 647) has been identified. Beyond this, agricultural activity, including enclosures, has been identified along the southern edge of BA10 (OA 796), with further field boundaries c. 135m to the south of BA10 (OA 833); boundary ditches (OA 650) in the centre of BA2; a Romano-British buried ploughsoil by the southern edge of BA2 (OA 792), and probable cultivation terraces (OA 730) c. 960m to the south-west of BA2. In addition, an ironworking enclosure (OA 699) has been identified c. 880m to the south-west of BA1, with additional rubbish pits (OA 727) c. 550m to the west of BA2 and chalk pits (OA 799) in the east of BA1.
- 7.4.20 In addition to these, Romano-British activity includes find spots of coins (OA, 732, 737, 744, 748, 753, 757, 758, 761-764 781) and pottery (OA 734, 735 and 780) within the settlement area. Further coins have been recovered to the south of the settlement area (OA 788), as well as to the south-west (OA 704, 708 and 752), within BA1 (OA 785) and by the south-western corner of BA1 (OA 711), while brooches (OA 747 and 779) and spear or javelin head (OA 771) have been recovered to the south of BA2. The spread of activity across the study area is also indicated through the pottery that has been recovered within BA1 (OA 784) as well as to the south (OA 705, 726 and 751) and west (OA 709) of the Site. The agricultural nature of activity outside the core settlement area is also indicated by the quern (OA 782) recovered from the north of BA1, while a domestic presence is also indicated by a spindlewhorl (OA 783) recovered from the same area.

Medieval (c. AD 410-1550) (Fig. 15)

Early-Medieval (c. AD 410-1065)

- 7.4.21 Despite extensive Romano-British settlement evidence within the study area, evidence from the early medieval period is much more limited. However, it does indicate that there was a continuing presence at the Romano-British settlement with post-Roman timber buildings and a possible defensive gateway (OA 878) and a Romano-British pit that was converted into a sunken featured building (OA 776; Fig. 13) c. 50m to the north of Walls Field. Approximately 800m to the north of this, within the west of BA1, an Anglo-Saxon burial was cut into a Bronze Age barrow (OA 450), a well-documented practice for this period and observed across the UK. Early Anglo-Saxon settlement, including sunken-featured buildings and associated postholes and continuing earlier activity, were also identified in the scheduled area south of Blackhorse Farm (OA 5; Fig. 2), c. 20m to the west of BA1.
- 7.4.22 In addition to these, a moated enclosure (OA 882) c. 930m to the north-east of BA1 is believed to have had Late Anglo-Saxon origins before developing into an elaborate partly moated enclosure surrounding a manor house. This was converted into formal gardens with ornamental ponds in the post-medieval period. Further development between the early and late medieval

periods include a 10th-12th century hamlet that had plots, pits, a possible post-built structure, a trackway and seasonal flooding deposits around a spring (OA 879) in the north-east of BA1,

Late medieval (c. AD 1066-1550)

- 7.4.23 At the time of the Domesday Survey (1086), the Site was within the hundred of Odsey with the closest recorded settlements at Rodhanger, c. 1.1km to the west, Radwell c. 920m to the north-west, and Bygrave c. 1.4km to the north-east. Of these, Rodhanger comprised a single household with surrounding ploughland and woodland; Radwell comprised 23 households with associated ploughland, meadows and two mills; and Bygrave comprised 35 households with associated ploughland and a mill (Powell-Smith 2025).
- 7.4.24 During the late medieval period, the area became more heavily settled, with the town established during the 12th century following the grant of land between the parishes of Bygrave, Clothall, Norton and Weston to the Knights Templar, with this land bounded to the east by the line of North Road. The Knights Templar called the town *Baldac*, the Old French term for the Arabian city of Baghdad (Mills 2011). This settlement area (OA 897) included two elongated triangular market places (OA 898) that met in the centre of the town, c. 345m to the west of Walls Field, with burgage plots (OA 896) laid out along the neighbouring streets. Backyard activity, demonstrated by ditches, pits and wells (OA 890, 900, 905 and 1072) has also been identified in this area.
- 7.4.25 To the east of this settlement, a leper hospital (OA 915) was founded in c. 1200 AD by the Knights Templar in the north of BA3. Trial trench evaluation and geophysical survey undertaken in this area in 2008 and 2009 identified evidence of the enclosure associated with this, as well as 19 east to west aligned burials and contemporary evidence of pitting and a well (Phillips et al. 2009, 125). However, this hospital was moved towards the Site during the 14th century, with its new location (OA 906) c. 130m to the north-west of Walls Field.
- 7.4.26 Further settlement, abandoned by 1350, has been identified with the earthwork remains, including a house platform, enclosures and hollow way, of a shrunken settlement (OA 1062) c. 1km to the west of BA1. Possibly associated with this are the large moated enclosure associated with a manor house (OA 886) and gullies (OA 700, Fig. 13) c. 660m to the west of BA1, c. 450m to the north-east of the settlement.
- 7.4.27 By the 15th century, surviving evidence of the town included a timber framed building, possibly a gatehouse (OA 892) and a house (OA 895) in the area c. 500m to the west of Walls Field.
- 7.4.28 The Site was primarily surrounded by agricultural activity with a late medieval or post-medieval field boundary (OA 911) and drainage ditch (OA 909) identified in the east of BA2. In addition to this, a series of ditches and trackways recorded to the north-west (OA 887) of BA3. As well as the agricultural activity, a deer park that later became Weston Wood (OA 908) was established c. 680m to the south of BA2; and possible traces of pillow mounds for rabbits have been identified in the east of BA1 (OA 917) and c. 300m to the east of BA3 (OA 926).

- 7.4.29 Finds of medieval artefacts, while concentrated in the fields to the south-east of the Site, also include a small number from within the Site: a silver coin recovered from the east of BA1 (OA 913), a key (OA 920) from the area of the leper hospital (OA 915) in the north of BA3, and a buckle (OA 910) from BA2.

Post-medieval (c. AD 1550-1900) (Figs 16-17)

- 7.4.30 The post-medieval town grew from the 16th century largely due to its proximity to the Great North Road and its associated milestones (OA 951 and 990). This expansion was mostly to the south of the Icknield Way, concentrated in the area of the present-day core of the town c. 200m to the west of the Site and seen through the surviving buildings in this area. Additional traces of post-medieval occupation can be seen in this area through former yards, boundaries and pits (OA 974, 991 and 994), as well as building foundations and well (OA 966), workhouse (OA 981 and 982) and a cemetery (OA 964).
- 7.4.31 The Cambridge branch of the Great Northern railway formed the main alteration to the 19th century landscape. This opened in 1850, cutting across the fields agricultural fields that had previously extended across BA1 and BA10, with the station (OA 987) by the south-west corner of BA1 and associated bridges (OA 953 and 984) to its west.
- 7.4.32 The industrial development of the town can be seen with the establishment of workshops (OA 985), maltings (OA 967, 970, 973, 988, 992 and 996) and breweries (OA 904, 965, 976 and 979) within this same area, with a malting (OA 1004) also established to its east, c. 50m to the south of BA1; whitewash works (OA 1002) c. 100m to the south of Walls Field. Beyond these lime kilns (OA 998 and 1008) were established to the south of BA2, with chalk pits to the south of BA2 (OA 1005) and adjacent to the northern end of BA3 (OA 1013).
- 7.4.33 Away from the town core, evidence of post-medieval activity is more agricultural in nature, with a water mill (OA 949) c. 600m to the north-west of BA1; a corn mill (OA 955) on the opposite side of North Road to BA1; a farmyard c. 440m to the north-west of Walls Field (OA 978); a timber farm building (OA 954) to the north of BA1; timber buildings (OA 1009 and 1011) in the east of BA2 and c. 80m to its east; a farmhouse (OA 963) c. 680m to the south-west of Walls Field; farmsteads by the south-east corner of Walls Field (OA 1006), c. 740m to the west of BA1 (OA 946), c. 920m to the south of BA2 (OA 1012) and c. 240m to the west of BA2 (OA 999). Beyond the buildings, post-medieval agricultural activity includes watercress beds (OA 952) c. 170m to the west of BA1; a track and boundary (OA 1000) identified in the south of BA1; cropmarks of a square woodland plantation and new boundaries that had been established in 1796 (OA 948) c. 820m to the west of BA1

Modern (Fig. 18)

- 7.4.34 Evidence of modern activity within the study area is limited. Beyond the expansion of the town, including the former site of a silk hosiery factory (OA 1053) to the west of BA2, early 20th century smallholdings that developed around a 19th century timber framed barn in the north-west of BA2 (OA 1007; Fig. 16) and adjacent to Walls Fields (OA 1059) and early 20th century farm

buildings (OA 1061) in the east of BA2, these relate to World War II. These later heritage assets include a PoW camp (OA 1054) and worker's hostel (OA 1057) to the south of BA2, WWI aircraft hangar (OA 1060) amongst the garden centre on the western edge of Walls Field, as well as a post-World War II smallholdings (OA 1056) in the south-west of BA1.

Undated (Fig. 18)

7.4.35 As well as the dated evidence recorded within the study area, a series of undated remains have been identified. These include a large number of cropmarks, identified from aerial photographs, with the most significant possibly being a possible henge or ring-ditch (OA 1101) on the eastern edge of Walls Fields; and the undated human remains recovered c. 25m (OA 1080) and c. 120m (OA 1076) to the south of BA1 and c. 260m to the south of Walls Field (OA 1079).

7.4.36 Most of the undated cropmarks identified across the study area relate to the agricultural landscape, with enclosures identified within BA1 (OA 1073) and BA3 (OA 1109 and 1118), as well as to the east (OA 1131, 1136, 1138 and 1145), west (OA 1065 and 1070) and north of BA1 (OA 1071 and 1108), and to the west (OA 1098 and 1104) and east of BA3 (OA 1128 and 1139); and strip lynchets to the east of BA3 (OA 1121, 1123, 1126 and 1132) and south of BA2 (OA 1097). Trackways have also been identified within BA10 (OA 1111 and 1122), as well as to the north of BA1 (OA 1082 and 1105), adjacent to the northern edge of BA2 (OA 1107), to the north of Walls Field (OA 1099) and following the 12th century parish boundary (OA 1149) c. 1km to the south-east of BA2. Linear ditches that have been identified within BA1 (OA 1073, 1074 and 1081), BA3 (OA 1110, 1112, 1119 and 1120) and BA10 (OA 1129), as well as to the east (OA 1113, 1130, , 1142, 1144, 1147 and 1148), north (OA 1068) and north-west of BA1 (OA 1063, 1064, 1066 and 1069), to the east of BA2 (OA 1124), and to the east (OA 1114, 1133, 1134, 1140, 1143 and 1146) and west of BA3 (OA 1106), may also indicate former field boundaries and trackways; while macula and pits may have been associated with the undated enclosures to the east (OA 1113), north (OA 1068) and west of BA1 (OA 1070), as well as to the east of BA3 (OA 1116, 1141) and to the north of Walls Field (OA 1102 and 1103).

7.5 Historic landscape characterisation (Fig. 19)

7.5.1 The Site lies within National Character Area 87 – East Anglian Chalk, an area characterised by a chalk ridge that crosses southern England from the north-east to the south-west and traversed by the Icknield Way. This is a rolling landscape of chalkland hills with large regular fields enclosed by low hawthorn hedges and few trees. Anthropogenic activity within this area typically includes features from the Neolithic onwards, including Bronze Age barrows, the Romano-British communication network and settlements, medieval agricultural activity, and nucleated villages (Natural England 2025).

7.5.2 The surrounding historical landscape of the study area is one that has largely been agricultural to the north, east and south, while to the west it has seen more urban and industrial development. Within the areas of the Site this portrays as the pre-18th century unenclosed arable land of Clothall Common across BA3 and extending to its east, as well as of Bygrave Common across the northern half of BA1 and extending to its north. The Site also includes

areas of 18th century parliamentary enclosure in the north-west of BA1, urban development and post-1950 enclosure and boundary loss within BA1; 18th century or later piecemeal enclosure and urban development within BA2; 18th century parliamentary and post-1950 enclosure, as well as urban development within BA10; and urban development within Walls Field.

- 7.5.3 With the Site being within the parishes of Baldock, Bygrave and Clothall, as well as formerly within the parish of Weston, it crosses multiple parish boundaries. While none of these are within any of the areas, their boundaries do follow the parish edges. In each case, along the boundaries between BA2 and BA3 and between BA3 and BA10, these follow the roads, Royston Road and Clothall Road respectively. The historical parish boundary between Weston and Baldock also runs along the western edge of BA2. Hedges are present alongside each of these roads with a hedge and fence also present to the west of BA2.

7.6 Historic hedgerow assessment

- 7.6.1 Although not lining large areas of the Site, hedgerows form part of the current agricultural landscape. Where these were identified, they mainly follow field boundaries marked on the historical mapping, including parish boundaries. Even if a hedgerow is considered important, it is not necessarily a heritage asset. However, it will need to be considered as part of the planning process.

BA1

- 7.6.2 BA includes hedgerows along its western, northern and parts of its southern and eastern boundaries. In the west of the Site, where the boundary follows North Road, this coincides with the parish boundary. The remaining hedgerows, although following boundaries marked on the 1847 tithe map, were not indicated as integral to the field system of the time.
- 7.6.3 As such, the hedgerow forming the western boundary of BA1 is considered important with regards to the Hedgerow Regulations.

BA2

- 7.6.4 While hedges and trees lined all four boundaries of BA2, those to the west and south were intermittent and mixed with the fenced boundaries of the 20th century residential developments to those sides, and the eastern and northern boundaries were formed of more complete hedgerows. A further hedgerow was also present across the centre of the area. Of these boundaries, those along the northern, western and most of the southern boundary were boundaries marked on the historical OS mapping dating to 1887, but were outside the tithable area of Weston at the time of its mapping. In contrast, the eastern boundary was formed when the A505 was built in the later 20th century.
- 7.6.5 Although there is no indication that these boundaries were hedged on the historical mapping, those to the north, west and most of the southern edge of the Site follow the parish boundary and are considered important with regard to the Hedgerow Regulations.

BA3 and Urban Open Land

- 7.6.6 The BA3 and Urban Open Lane area of the Site included hedgerows along its southern, eastern and part of its western boundaries. Other than the boundary to the east of the area, which was formed with the creation of the A505, these boundaries had been established by the time of the 1842 Clothall tithe map. Although there is no direct indication of hedgerows along these boundaries, the boundary to the south of the area follows the historical parish boundary between Clothall and Weston, which follows the line of Clothall Road.
- 7.6.7 As a result, the hedgerow along the southern boundary of the area is considered important with regard to the Hedgerow Regulations.

BA10

- 7.6.8 Hedgerows were present along parts of the southern, eastern and western boundaries of BA10. Although some of these are associated with the residential properties fronting Royston Road, they also continue between these properties. The southern boundary, along Royston Road also follows the line of the parish boundary between Clothall and Bygrave. Where the hedges are located elsewhere in the area, they follow the historical boundaries marked on the 1847 Bygrave tithe mapping, although they are not marked as hedged.
- 7.6.9 As such, where the hedgerow continues between the residential properties along Royston Road they are considered important with regard to the Hedgerow Regulations.

Walls Field

- 7.6.10 Hedges associated with Walls Field are limited to one along the northern edge of the field. At the time of the 1842 Clothall tithe map, this was marked as a track with no indication of a hedgerow. However, this does follow the northern limit of the scheduled monument of The Romano-British small town and Late Iron Age settlement at Baldock (OA 6) and is not expressly excluded from the scheduling. Where the southern boundary of the area follows the parish boundary, this does not include a hedgerow.
- 7.6.11 As such, the hedgerow along the northern boundary of the Walls Field area is considered important with regards to the Hedgerow Regulations.

Land west of North Road

- 7.6.12 The boundaries of Land west of North Road are entirely hedged with an additional area of hedge extending into the area. The external boundaries had been formed by the time of the 1847 Bygrave tithe map, although they were not indicated as hedged. However, the north-eastern corner of the area coincides with the parish boundary between Baldock and Bygrave. The internal hedge is not on a boundary marked on the historical mapping.
- 7.6.13 As such, the hedgerow in the north-east corner of BA1 is considered important with regards to the Hedgerow Regulations.

7.7 Cartographic evidence (Figs 20-22)

- 7.7.1 A map regression exercise was undertaken as part of the baseline assessment in order to show the later development of the Site. In general, this shows the Site within an area that remained agricultural in nature, with urban development concentrated to the west.
- 7.7.2 The earliest map referred to is Saxton's 1579 map of *Hertfordiaë*. This, along with other 16th and 17th century maps marks Baldock as towards the western or southern edge of areas of hills. These probably relate to the rolling chalk hills of the East Anglian Chalk National Character Area. This continued to be the case, until Conder's 1659 *New Map of Hartfordshire* which shows that the roads from the south converged on Baldock at the point where they met the *Ikniel Way*, with only one road (North Road) extending to the north. By Seller's 1676 map of *Hertfordshire* the town had developed around these roads to the south of *Icknall Way*, with expansion to the north by the time of Moll's 1724 map, which also showed areas of woodland to the north-east and south-east of Baldock.
- 7.7.3 The tithe maps for the parishes of Baldock, Bygrave, Clothall and Weston indicate that most boundary change since the middle of the 19th century has been due to boundary loss as fields have become larger. The Site is within three parishes today (Baldock, Bygrave and Clothall), but at the time of the tithe maps, none lay within Baldock, while the area of BA2 (now in Clothall) was in Weston. The tithe awards and their maps indicate that the Site covers:
- 245 plots of land within the parish of Bygrave. The majority of these plots were held by John and Morris Prior (or Pryor) and Reverend John Allington, with additional plots held by Reverend Thomas Blackburne, Edward Gooch, John Izzard Pryor, the Marquis of Salisbury, Baldock 15 Houses Charity, the Trustees of Mary Gason and Margaret Viscountess Obert. These plots were occupied by John and Morris Prior (or Pryor), John Bygrave, William Logsdon, John Steed, John Little, William Iredale. In most cases occupiers utilised land from one landholder.
 - 39 plots of land within the parish of Clothall. These were often held by the same people as those who held land in Bygrave. These were: John Izzard Pryor, John and Morris Pryor, Samuel Edward Cooch, Mary Gason, Reverend James Ellice, the Right Honourable The Marquis of Salisbury, Edward Parkins, The Right Honourable the Marquis of Salisbury, Major Hampson Lessee, Reverend John Alington, Robert Fitzjohn, Trustees of the Poor Baldock, Reverend William Fowler. These plots were occupied by John and Morris Pryor, Francis Iredale, John Steed, William Sale, John Little, Philip Saunderson, Robert Fitzjohn, John Smith, William Logsdon. In most cases, occupiers utilised land from one landowner.
- 7.7.4 At the time of the tithe awards, the fields in which the Clothall apportionments were situated were known as *Baldock Field*, *Royston Road Shot* and *The Walls*. By the 1863 OS mapping, BA1 was situated in *Bygrave Field*, later *Bygrave Common* and BA3 was in *Clothall Field*, later *Clothall*

Common, both indicating the common land that they comprised. The area of Walls Field remained within the area of *Walls*.

- 7.7.5 Trackways were marked across the Site on the tithe mapping on broadly north-west to south-east and north-east to south-west alignments, with several remaining in use as the PRowS, including the ones across BA1 and Walls Field and along the northern edge of BA1. However, the track that crossed the Urban Open Land on an east to west axis, marked from the tithe maps, survived into the 21st century.
- 7.7.6 In general, the OS mapping of the Site highlights to topography of the area, with the Site on undulating ground, including BA1 and BA3 on the slopes of the valley. It also shows the boundary loss that has taken place.
- 7.7.7 By 1834, Bygrave Road had been established across BA1, with an additional routeway marked where the current PRow crosses the area. Although this map shows the Hitchin and Cambridge branch of the Great Northern railway cutting across the Site, this was not established until 1850 and this either shows the planned route or was drawn on later. The 1863 1-inch OS map shows the route of the railway with its associated bridges and indicates where the line includes a cutting or has been built up. Both are encountered in its length between areas BA1 and BA10. This also saw the truncation of fields within the parish of Bygrave, with 22 plots cut across.
- 7.7.8 In general, the OS mapping indicates that by 1884 the boundaries associated with the tithe apportionments had begun to disappear, while the boundaries within the Site were straightened after this.

BA1

- 7.7.9 More specifically, within BA1, these historical OS maps indicate that trees were present alongside the roads and tracks from at least 1898. The development adjacent to the south-west corner of BA1 had been built by 1922, when buildings along Bygrave Road had begun to be erected, with further buildings along Royston Road by 1935. Where boundaries survived within BA1, they had become straighter by the time of the 1950 mapping, with the boundaries more reflective of the current boundaries. Additional buildings were erected in the west of BA1 by 1922, 1950 and 1960

BA2

- 7.7.10 A limekiln and chalk pit are marked on the 1898 map by the south-west of BA2, with this area developed into the caravan park by 1967, by which time the boundaries across the area had been established. The buildings along the north-eastern edge of this area were erected by 1922.

BA3 and Urban Open Land

- 7.7.11 The allotment gardens adjacent to the south-west of BA3 had been established by 1925, with small holdings to their east, within the south of BA3. By 1967, the area of hardstanding in the south of the area had been established, although the building was not erected until after 1974. The A505, forming the eastern boundary of the area was also not constructed until after this time.

BA10

- 7.7.12 The 1940 mapping of BA10 shows the plots that had been established across the area in relation to the buildings that fronted onto Royston Road. These plots followed the alignments of the tithe boundaries.

Walls Field

- 7.7.13 The eastern part of Walls Field retained its sub-divisions into the 20th century, with buildings erected in the east and south-east by the 1922 mapping with small holdings to their west. The footpath across the middle was in use by 1922, and buildings in the area of the current garden centre by 1925. By 1940, a further plot had been established to the north of the nursery, although this was no longer marked by 1944. By 1950, a cemetery was labelled in this area, with an area of woodland to the west of the nursery/garden centre by 1967. Development to the north of this area did not occur until after 1967.

Land West of North Road

- 7.7.14 Throughout the historical mapping, the land to the west of North Road remains a single plot that had gained a building along its western edge by 1956.

7.8 Aerial imagery

- 7.8.1 A review of aerial imagery available for the Site was conducted as part of the baseline assessment. A total of 164 aerial photographs and 24 satellite images were reviewed, comprising vertical and oblique images covering the period 1925-2025. These highlight the valley setting as well as the agricultural nature of the Site and its surrounding area, with cropmarks associated with the concentrations of archaeological activity, especially Sites III, V, VI, VIII, IX, X and XI visible, especially on the oblique imagery.
- 7.8.2 No new archaeological features were identified.
- 7.8.3 The earliest images viewed, from 1925, shows the town with the south-west corner of BA1 visible, prior to its residential development. These images show the transition from the residential town to the agricultural land beyond.

BA1

- 7.8.4 The aerial imagery shows the area as remaining in agricultural use throughout the 20th century with its proposed boundaries following those of the established fields, other than the residential area by the south-west corner. Buildings marked on the historical mapping are visible by the south-west of the area (see Fig. 22). The straighter modern boundaries that replaced the 19th century boundaries within the Site are also prominent.
- 7.8.5 In addition to the cropmarks associated with Sites VIII and IX, the historical boundaries are visible, especially in the part to the south of Bygrave Road in the 2008 images and associated with Blackhorse Farm in 2009. In the south of the area, cropmarks that are possibly associated with the Icknield Way (OA 644 and 669) can be seen, and of the identified Bronze Age round barrows (OA 477, 473, 478 and 481) in the south-west. Further cropmarks can also be seen to the east of the area.

BA2

- 7.8.6 This area remained as agricultural land throughout the aerial imagery. The eastern boundary of the area, following the pre-existing field alignment, was established with the introduction of the A505 by 2007, with the internal boundaries established by 2008. Alterations since this include the introduction of additional fenced paddocks in the west, as well as the south-eastern corner being left as scrubland after 2012.

BA3 and Urban Open Land

- 7.8.7 While the southern two thirds of the area have remained in agricultural use throughout the 20th century, the northern third became scrubland after the introduction of the A505 by 1974. This northern area has subsequently seen footpaths established across it, with the current PRow, following a historical line, formalised between 2003 and 2007. While most of the western and southern boundaries of the Site had already been established by existing roads or tracks, the route of the A505 created the eastern boundary by cutting across the pre-existing fields. It also impacted the northern boundary with the slight re-alignment of Royston Road and insertion of the roundabout.
- 7.8.8 In addition to these, the agricultural building in the south of the Site had been erected by 1971, with the allotment gardens to the west of the Urban Open Land visible throughout the satellite imagery. The boundary marking the northern edge of the Urban Open Land remained until 2008, after which it could be seen as a cropmark. In the same vein, the track crossing the Urban Open Land remained in use until the construction of the A505, with its route remaining visible as a cropmark. Other historical boundaries across the area can also be seen as cropmarks

BA10

- 7.8.9 This area has remained a mixture of arable and grassland with the housing and their associated plots along Royston Road established in the earlier 20th century. Minor alterations to the southern edge of the Site may have been caused by the re-alignment of Royston Road in association with the creation of the A505 by 2007. Further disturbance will also have been caused by the erection of the pylon in the centre of the area, visible on the 2014 images.
- 7.8.10 The only not previously recorded features relate to linear earthworks, seen during the site visit, near the centre of the area that are visible on the 2014 images, and an intermittent hedgeline that runs parallel to Royston Road and probably formed a boundary associated with the properties when they were built.

Walls Field

- 7.8.11 As with the other areas of the Site, Walls Field has remained in agricultural use, although with residential development to its north after 1952, the school to the west by 2000, with a ditch through its grounds appearing to be culverted after 2003. In addition to these, the buildings associated with the garden centre/nursery are visible in the eastern enclave. Although the last of

the boundaries across the Site had been removed after 1982, the historical boundaries remained visible as cropmarks in 2008 and 2014.

Land west of North Road

- 7.8.12 This area has consistently remained an agricultural or grass field, although the presence of a hedge extending northwards into the area suggests the presence of a former boundary. The satellite imagery highlights the erosion of footpaths across the area.

7.9 LiDAR (Fig. 23)

- 7.9.1 The LiDAR data utilised in this report was captured by the Environment Agency (EA) and made available via the EA online archive (downloaded from <http://environment.data.gov.uk/ds/survey/#/survey/>). In this instance Point Cloud data for OS sheets TL23NE, TL23SE, TL23NW and TL23SW were downloaded.

- 7.9.2 This data was surveyed at 1m intervals with the data collected on 18 February 2019 and 16 March 2020. The Point Cloud data was processed using ArcGIS Pro software and the Relief Visualisation Toolkit (RVT), and visualisations were created using hill shade, multi-hill shade, sky view factor, open-positive, open-negative, slope gradient and simple local relief model (SLRM) visualisation techniques.

- 7.9.3 Figure 23 presents a multi-hill shade visualisation that highlights the topography of the area, with the Site spread across both sides of a valley that has its lowest point across BA1 and BA10, and the boundaries that follow the ridge along the northern edge of BA1. This also shows the former river valley along which the Bronze Age barrows were sited and which was indicated by the alluvial deposits in the east of BA1 and BA10.

- 7.9.4 No new features were identified, although former boundaries were visible across the Site, especially in the centre of BA1 where they corresponded to the boundaries on the tithe mapping.

7.10 Areas of archaeological sensitivity (Fig. 24)

- 7.10.1 Figure 24 shows a plot of the areas of archaeological sensitivity that have been identified and recorded within the HHER. These highlight the areas where there is expected to be greater archaeological potential on the basis of the archaeological remains that have been recorded. This indicates that most of the Site encompasses land that is expected to contain archaeological remains. The exception is part of the centre and west of BA1 and the south of Land west of North Road. It is worth noting, however, that this higher sensitivity also corresponds to where a greater number of features have been identified through the aerial mapping (see Fig. 7). It is also worth noting that although this includes the scheduled area by BA1 (OA 5), it does not include the area at Walls Fields (OA 6) which is on the Heritage at Risk Register.

8 WALKOVER SURVEY

- 8.1.1 A walkover survey of the Site (Fig. 25) was carried out on 22 August 2025 in overcast and damp conditions. Despite the conditions, visibility was good. Although all areas of the Site were accessed, the presence of crops and livestock in some fields meant that this was often limited to field edges and PRowS. Where this occurred, the entire field could be seen from nearby vantage points.
- 8.1.2 The Site comprised five sub-rectangular or irregularly shaped areas across undulating land on the eastern and northern edges of Baldock. Each area comprised multiple fields in agricultural or grassland use with some areas overgrown. The Site is bounded by hedgerows and ditches, with the hedgerows mostly comprising hawthorn. Other than along field boundaries, trees were only present in the north of BA3 and west of Walls Field.

BA1

- 8.1.3 Area BA1 comprises a 141ha sub-rectangular area across multiple agricultural fields in the north of the Site. It is bisected by Bygrave Road/Ashwell Road, which is lined by dispersed agricultural and residential buildings. Public rights of way (PRow) cross both the southern and northern parts of the area. the area broadly north-east to south-west with a further PRow along the northern Site boundary. It is bordered to the north and east by agricultural land, to the south by the Great Northern Railway and to the west by the North Road and residential development. The ridge towards the north of the area provides views across Baldock (Plate 1).
- 8.1.4 No indication of the Bronze Age barrows could be seen amongst the arable crop in the south-east of the area (Plate 2). Some barns seen on the historic mapping within the Site are still standing (Plate 3).
- 8.1.5 Although boundaries between different plots within the area were often only evident by changes in crops or access tracks, hedges were more evident along the external boundaries of the area, especially where it was in closer proximity to residential development along North Road and Bygrave Road. The hedgerow along the northern boundary of the area, with intermixed trees, was more established than other hedgerows within this area. In places, especially the north-east, ditches were used to form the field boundaries. The line of an overhead electric cable extends along the northern boundary of the area with the pylons at least partially within the hedge (Plate 4), while further cables and street furniture were visible along the western boundary of the area (Plate 5).
- 8.1.6 Where field entrances extend off Bygrave Road, patches of ground disturbed by vehicle movements could be seen. At the time of the site visit, none of these showed any signs of deposits other than ploughsoil/topsoil although water was contained within some (Plate 6). Most of the area comprises arable land, although sheep were seen grazing among some of the crops to the north of Bygrave Road (Plate 7). However, the south-western part of the Site forms grass paddocks with structures, fences, small hedges and telegraph cables. Further telegraph poles followed the line of Bygrave Road, where street furniture was also present (Plate 8).

BA2

- 8.1.7 Area BA2 comprises a 9.9ha sub-rectangular area of agricultural and grass fields in the south of the Site. It is bordered to the north-east by occasional houses and Clothall Road, the south-east by the A505, the south-west by a caravan park and the north-west by residential development off Laxton Gardens and Walnut Avenue. The A505 to the east is substantially lower than the area, while Clothall Road to the north is on the same level.
- 8.1.8 Hedgerows and fences formed both the external and internal boundaries within this area, with an established hedgerow separating the arable crop in the east from the grass to the west and dense vegetation to the south of the area. In addition to hedges and trees, there was an area of scrubland in the south-east (Plate 9) and the northern edge of the area, where there were the residential properties (Plate 10), was overgrown. The western part of the area was grass (Plate 11), with horses present within the field at the time of the site visit.
- 8.1.9 An area of overgrown hardstanding was evident adjacent to the access in the north-east of this area (Plate 12), and electricity pylons were evident along the field boundaries (Plate 13).

BA3 and Urban Open Land

- 8.1.10 Area BA3 comprises a 33.6ha irregular area that includes arable land in the south and common land in the north. The common land is crossed by a PRow that joins a concrete bridge over the A505 on the edge of the area (Plate 14). Additional paths have been eroded into the ground across this northern part of the area. At the southern end of the area is land designated for Urban Open Space, which is currently in arable use and has a further PRow crossing it (Plate 15). This area is bordered to the south-east by the A505, the north by Royston Road and its street lighting, the west by residential development, with the scheduled area of Walls Field visible to (Plate 16), and to the south-west by Clothall Road.
- 8.1.11 The northern part of the Site, where it is not in agricultural use, includes scrub and trees across its area. Due to the topography of the area, wide ranging views are provided from the north (Plate 17). None of the trees are of significant age. A drain crosses the area at the narrowest and lowest part of the Site (Plate 18).
- 8.1.12 The southern part of the Site is in agricultural use, with hardstanding and a barn standing on the southern edge of the Urban Open Land (Plate 19).

BA10

- 8.1.13 Area BA10 comprises a 20ha sub-rectangular area of mixed grass and arable land in the centre and east of the Site. It is crossed by a PRow in the east. It is bordered to the north by the Great Northern Railway, the east by a farmstead and agricultural land, the south by Royston Road and occasional houses, and to the west by a trading estate. The boundaries of the houses fronting onto Royston Road include dense hedges and trees (Plate 20).

- 8.1.14 Although the eastern part of the Site remains in agricultural use with wheel ruts and backfilled trenches visible across the area, the west did not have crops.
- 8.1.15 Where the railway extended alongside the northern boundary of the area, this had been built up in the west with a drainage channel or small tunnel beneath (Plate 21), while to the east the railway followed a cutting that extended below the level of the field (Plate 22). A pylon (also visible in the aerial imagery) from an overhead cable is present in the centre of the area (Plate 23), with street lights along Royston Road (Plate 24). The remains of a concrete structure associated with the railway were located along the area's northern edge (Plate 25), with animal burrowing also visible in this area (Plate 26).
- 8.1.16 The western half of the area also revealed linear features on the same axis as Royston Road that were visible as slight earthworks (Plate 27). Their position suggests that the one extending north to south may have been a boundary seen on the tithe map, with the one that was aligned perpendicular possibly associated as a field division.

Walls Field

- 8.1.17 Walls Field comprises a 11ha sub-rectangular parcel of land formed of two arable fields with the church spire visible in the background (Plate 28). The fields are split by a PRow (Plate 29). It lies towards the south of the Site and is bordered to the south-west by Clothall Road, the north-west by a school, the north-east by a PRow with trees and residential development beyond, and the south-east by a garden centre and Wallington Road. Fencing and hedges form the boundary to the garden centre, fencing to the school and a hedge to the residential development to the north. The south-east of the area also included some trees (Plate 30).
- 8.1.18 The agricultural field is lower than the level of the road, with street lighting and overhead cables on the southern boundary (Plate 31). Evident within the field, along the route of the PRow is animal burrowing (Plate 32).

Land west of North Road

- 8.1.19 The land to the west of North Road comprises a 1.65ha area of grass field in the west of the Site. It is bordered to the north by Ivel Springs Local Nature Reserve, the west by allotment gardens, the east by North Road and the south by trees and grassland. Its boundaries are formed by established hedges. A hedge extends north-east into the field from the south-western boundary and a linear mark was visible extending from it (Plate 33). Slight erosion was also visible where a path cut across the area, into the Site. The church spire is visible in above the hedgeline in views to the south-west (Plate 34).

9 PREVIOUS IMPACTS AND SURVIVAL

- 9.1.1 The historical baseline indicates that the Site has been subject to a number of disturbances as a result of the activity that has taken place. In most cases,

- these are general and cover all areas of the Site, but in some cases, they have been more localised.
- 9.1.2 The Site comprises multiple agricultural fields that the historical baseline indicates have been in agrarian use since at least the middle of the 19th century. As such, the Site would be expected to have seen horizontal truncation of any below ground remains from ploughing.
- 9.1.3 Changes to the chemical and hydrological composition of the soil, alongside physical disturbance (Crow 2004, 19, 24-25) will have been caused by the crops grown across the Site since at least the middle of the 19th century and the hedges and tree along the field boundaries to the east and west. Waterlogging has been reported by locals in the area at the western end of Walls Field and suggests the potential for increased preservation of organic remains. However, at the time of the site visit, there was no indication that there was damp ground in Walls Field.
- 9.1.4 In addition to arable crops, the agricultural nature of the Site and its environs has also included livestock grazing. This may have resulted in areas of poaching where the livestock congregated, especially around food or drink troughs and at pinch points through gates. At the time of the site visit, sheep were within some of the fields in BA1 and horses in the east of BA2.
- 9.1.5 With the depth of any subsoil and topsoil overlying any potential archaeological remains unknown, the movement of vehicles across the Site may have disturbed deposits near the surface through compression and localised truncation. Any indication of this on the Site was limited to shallow wheel ruts, with the most extensive at field entrances still only revealing the topsoil.
- 9.1.6 Where buildings and their associated utilities have been in the south-west of BA1 and the east of Walls Field, and are currently within the Site along Bygrave Road and the south of BA3, there will probably have been disturbance to below-ground deposits from excavation for their foundations. Disturbance will also have been caused with the installation of the pylon in BA10. Further disturbance may also have been caused in the areas surrounding the buildings through construction related activities. In this way, construction related activities associated with the garden centre to the east of Walls Field may have extended onto the Site.
- 9.1.7 While the railway cuts across the historical fields of the parish of Bygrave, the A505 cuts across the fields in the parish of Clothall, with the A505 lower than the level of BA3. These will have seen truncation through excavation within their footprints as well as compression in their associated banks. Further disturbance will have been caused by associated vehicle movements. A similar impact may also have been had by Bygrave Road across BA1 when the modern surface was installed, while smaller tracks and footpaths will have seen erosion and disturbance to deposits.
- 9.1.8 The historical baseline indicates that intrusive post-medieval activities (quarrying) have been undertaken in the fields to the south-west of BA2 with the chalk pit marked on the historical mapping. As such, there is potential for those activities to have continued onto the Site. If quarrying has taken place, this will have caused truncation of any deposits through excavation.

- 9.1.9 In summary, although disturbance is expected across the whole Site from former agricultural activity, additional, more localised disturbance will have been caused by the tree and hedges along the field boundaries, and may also have been caused from quarrying activities.

10 ARCHAEOLOGICAL POTENTIAL AND SIGNIFICANCE

- 10.1.1 The following assessment of the archaeological potential and significance of the Site is based upon the information discussed above in Sections 7-9. Archaeological trial trench evaluations have been carried out across the Site and provide an indication of the past activity within it. These did not identify later activity truncating the archaeological remains, although ploughing may have disturbed the upper levels of features with limited subsoil having been identified.

- 10.1.2 In general, due to the consistent nature of agricultural activity across the Site, it would be expected that survival of archaeological remains would be equally consistent across the Site.

Prehistoric – high

- 10.1.3 While evidence of prehistoric activity has been identified across the study area, there are concentrations of activity from different periods. This includes a prehistoric trackway (the Icknield Way; OA 644) across the south of BA1 and a Neolithic to Bronze Age barrow cemetery in the east of BA1, with further barrows in the centre of BA1 and to the south-east of BA10. By the Iron Age, activity became concentrated in the area of the town with Late Iron Age beginnings to settlement that would last throughout the Romano-British period, with further enclosures in the east of the Site and pit alignment that may have signified a tribal boundary in BA3.

- 10.1.4 Due to the extent of prehistoric remains identified within the Site, there is a high potential for further associated remains to be encountered. These are likely to be of local significance and relate to Neolithic to Bronze Age barrows in BA1, BA2, BA3 and BA10, as well as Iron Age settlement, boundaries and enclosures in BA1, BA3 and Walls Field.

Romano-British – high

- 10.1.5 Extensive Romano British remains associated with a settlement and funerary activity that had begun during the Late Iron Age and expanded alongside the Roman road (OA 697 and 875) have been identified in the area of the town, concentrated across the Walls Field area and to its north-west. The Roman road also extends along the routes of Clothall Road and North Road, between the areas of the Site. As with the settlement that grew around Walls Field, the areas of Late Iron Age activity in the east of BA1 continued to be (OA 662 etc.) in use, with additional enclosures (OA 796) in the west of BA10 and chalk pits (OA 799) in the south of BA1.
- 10.1.6 As a result, there is a high potential for remains of Romano-British date to be encountered on the Site. Where these are encountered, they are likely to be of local significance relating to the settlement in BA 1 and Walls Field, the

road network in BA1, BA2, BA3 and Walls Field, as well as agricultural activity across the whole Site.

Medieval – high

- 10.1.7 Although evidence of medieval activity within the study area is scarcer than that for the preceding periods, both early and late medieval activity has been identified within the Site. For the early medieval period, this is limited to settlement (OA 878) adjacent to Walls Field and a 10th-12th-century hamlet that surrounded a spring (OA 879) in the north-east of BA1 and the find spot of a mid-late Anglo-Saxon brooch (OA 877) by the northern boundary of BA1.
- 10.1.8 Evidence of late medieval activity is more extensive across the study area with a focus to the west of the Site where the town grew from its 12th century beginnings (OA 897), with the surrounding landscape probably in agricultural use. Within the Site, related evidence includes an area of settlement and industrial activity (Site V) BA1, as well as the site of the original leper hospital (OA 915) in the north of BA3, possible pillow mound (OA 917) in the east of BA1 and ditches (OA 909 and 911) in BA2. While find spots have been focused to the south-east of the Site, they do include a coin recovered from the east of BA1 (OA 913), a buckle (OA 910) in BA2 and a key (OA 920) from the area of the leper hospital.
- 10.1.9 As such, there is a high potential for both early and late medieval remains to be encountered on the Site. Where these are encountered, they are likely to be of local significance relating to settlement in BA1 and Walls Field, industrial activity in BA1, the leper hospital in BA3, and agricultural activity across the whole site.

Post-medieval – high

- 10.1.10 Evidence of the post-medieval period is concentrated around the growth of the town to the west of the Site, but also includes a substantial number of find spots from the fields to the south-east. The proximity of the Site to the historic town and a main road through it, has resulted in associated buildings on the edges of the areas, including a mill (OA 5) to the west of BA1 and farm buildings (OA 1006, 1007, 1009 and 1011) by BA2. Other activity within the Site or by its edges includes track on the southern edge of BA1, and chalk pits (OA 1008 and 1013) adjacent to BA2 and BA3. A small number of post-medieval artefacts have also been recovered from the Site, including lead cloth seals (OA 1010 and 1021) from BA1 and BA3.
- 10.1.11 Overall, there is a high potential for post-medieval remains to be encountered on the Site. Where these are found they are likely to be of local significance associated with the agricultural activity taking place in the town's hinterland. There may also be evidence of quarrying taking place with pits identified by the south-west of BA2.

Modern – high

- 10.1.12 Although Baldock continued to expand during the 20th century, its industrial activity near the Site declined with the closure of the maltings (OA 1004) adjacent to BA1. What it did see, though was residential development between BA3, BA10 and Walls Field, small holdings within BA1 (OA 1056 and

1058), farm buildings (OA 1061) on the northern edge of BA2, allotment gardens adjacent to BA3/the Urban Open Land and a nursery in Walls Field. These highlight the continued agricultural use of the land to the north and east of Baldock.

- 10.1.13 As such, there is a high potential for remains of modern date to be encountered. Where these are found, they are likely to be of local importance relating to the agricultural use of the area.

11 POTENTIAL IMPACTS

- 11.1.1 The Growing Baldock development is currently at the pre-planning stage, and as such only has an indicative Parameter Plan (David Lock Associates 2025a, drawing no. UAC092-002 Rev Q). The development specification (David Lock Associates 2025b) for the outline planning application defines the proposed development as for up to 3,200 homes, up to 16ha of employment, waste and leisure infrastructure, a mixed use local centre, up to one secondary school, up to two primary schools, up to one SEND school, health hub, green infrastructure (including parks, formal sports provision, play, habitat areas, informal open space and structural planting), internal street network, access junctions and railway crossing, public transport infrastructure, pedestrian/cycle network (including PRow diversions, active travel routes, mobility hubs and crossing of the railway), utilities and drainage infrastructure (including diversions of existing and provision of new infrastructure, pumping stations, sustainable drainage, primary substations, rising main/strategic sewer and renewable energy infrastructure), ground remodelling/earthworks and any necessary demolitions.
- 11.1.2 The indicative Parameter Plan indicates that the employment space will be concentrated in the area between Royston Road and the railway, within BA10, while residential dwellings will be focused in the centre of BA1 and across BA2, and a flexible residential and education area will be within the centre of BA3. While strategic green infrastructure will bound the Site in the north and east of BA1 and south-east of BA2, other than a small area adjacent to Royston Road, the northern part of BA3 will be retained habitat. Walls Field and the Urban Open Land at the south of BA3 will form part of the strategic green infrastructure.
- 11.1.3 As such, it would be expected that intrusive works will be required and that these would have the potential to impact any surviving below-ground heritage assets. This includes:
- site clearance/demolition works;
 - removal of topsoil and subsoil within the Site;
 - excavation works associated with building foundations; and
 - excavation work associated with the sustainable drainage corridor and SUDS basins, and the installation of services, highways infrastructure and sustainable the travel network.
- 11.1.4 Excavations for these are likely to be to different depths, with more substantial structures, including the taller buildings), expected to require deeper works. The focus of the impact from these would be within the

- footprints of the excavation works, but associated works may impact areas outside their footprints.
- 11.1.5 It may also be expected that the landscaping works taking place to facilitate works and to provide the strategic green infrastructure will include a mixture of excavation and build-up. These will cause truncation and compaction of archaeological deposits respectively. Where ecological enhancements are proposed within the strategic green space (in the north of BA1, north of BA3 and across Walls Field), this may require intrusive works.
- 11.1.6 In addition to the excavation work required, it would be expected that plant movements across the Site and the storage of materials will cause some disturbance to any potential archaeological remains through compaction, vibration and rutting, depending on the ground conditions.
- 11.1.7 Where possible, it is intended that existing trees/hedgerows and other vegetation of value will be retained. This will help reduce the amount of disturbance to archaeological remains as a result of disturbance and/or truncation from the removal of existing vegetation and truncation from the planting of new vegetation. However, some of the hedgerows that have been identified as of importance (as per the Hedgerow Regulations 1997 historic criteria) are currently expected to be impacted in certain sections to construct the highways and active travel links across the Site. Creating access through these points would cause truncation to the hedgerow at these points, with their indicative locations illustrated on Figure 19.
- 11.1.8 The change in land use and land surfaces would be expected to change the hydrological conditions of the Site due to changes in vegetation levels and surface water runoff/absorption. As a result, there would be expected to be hydrological and chemical changes to the soil that may impact the preservation of archaeological deposits and material.
- 11.1.9 In summary, it would be expected that the impact of development on any surviving archaeological remains on the Site would be from disturbance because of vehicle movements, storage of material, and truncation from intrusive works – including within the footprints of buildings, the installation of service corridors and roads across the Site. Although the current proposals would impact the whole site, the main intrusive impact would be in the clusters of housing across BA1, BA2 and the centre of BA3.

12 POTENTIAL FOR FURTHER WORK

- 12.1.1 Non-intrusive geophysical survey and Intrusive archaeological trial trench evaluations have been carried across the Site and have indicated that there is good preservation of archaeological remains. Consultation with the Hertfordshire County Council Historic Environment Advisory Service (HCC HEAS) has been undertaken throughout the pre-application process and it is understood that archaeological mitigation is required prior to construction.
- 12.1.2 The overall mitigation requirements are yet to be determined, but productive discussions with HCC HEAS up to this stage mean that the mitigation process should be identifiable relatively promptly. It is anticipated that mitigation would take the form of archaeological excavation at targeted

areas across the development area where significant archaeological remains were identified during the archaeological evaluation, as well as identifying areas where preservation in-situ may be suitable during the detailed design stage.

- 12.1.3 Scheduled Monument Consent will need to be sought from the Secretary of State for Culture, Media and Sport prior to any works occurring within the Walls Field area and in association with the change in use from agricultural cultivation to open space.

13 CONCLUSION

- 13.1.1 The objectives of this DBA were to summarise archaeological evaluation works undertaken for the project to-date, and to assess the archaeological potential of the Site and the impact of the proposed new works on any surviving archaeological remains by drawing together all known documentary, cartographic and archaeological evidence from the surrounding area.
- 13.1.2 Assessment of the archaeological and historical evidence from the Site and its environs, including archaeological works across the Site, has shown that there is a high potential for prehistoric, Romano-British, medieval, post-medieval and modern remains to be encountered on the Site and that these would be impacted by the proposed development.
- 13.1.3 Geophysical survey and archaeological trial trench evaluation have already been carried out across the Site. These identified 12 areas of archaeological significance, and as a result, preservation *in situ* and archaeological open area excavation will be required by HCC HEAS as part of archaeological mitigatory works to identify and characterise, as well as preserve, the archaeological remains.

APPENDIX A GAZETTEER OF KNOWN HERITAGE ASSETS WITHIN THE STUDY AREA

APPENDIX C OASIS REPORT FORM

Project Details

OASIS Number	oxfordar3-536018		
Project Name	Land to the North and East of Baldock, Hertfordshire		
Start of Fieldwork	29 July 2025	End of Fieldwork	29 July 2025
Previous Work	No	Future Work	Unknown

Project Reference Codes

Site Code	XHTBALCON	Planning App. Number	N/A
HER Number	N/A	Related Numbers	N/A
Prompt	National Planning Policy Framework (NPPF)		
Development Type	Urban Residential		

Techniques used (tick all that apply)

- | | |
|--|--|
| ☐ Aerial Photography - interpretation | ☒ Documentary Search |
| ☐ Aerial Photography - new | ☒ Visual Inspection (site visit) |

Monument	Period	Object	Period
Boundary	Uncertain	None	None

Project Location

County	Hertfordshire	Address (including Postcode) Land north of the A505, Baldock Hertfordshire
District	North Hertfordshire	
Parish	Baldock	
HER office	North Hertfordshire	
Size of Study Area	220ha	
National Grid Ref	TL 25341 34423	

Project Originators

Organisation	Oxford Archaeology
Project Brief Originator	Urban&Civic
Project Design Originator	Oxford Archaeology
Project Manager	Pat Moan
Project Supervisor	Robin Webb

Project Archives

	Location	ID
Physical Archive (Finds)	N/A	N/A
