PROJECT NO.	DRAWING NO.	REV.
23-M004	DL67	B

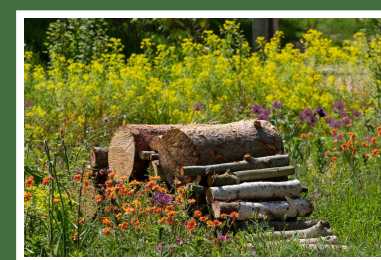

iceni Projects accept no responsibility for any unauthorised amendments to this drawing. Only figured dimensions are to be worked to.

A pumptrack serves all ages and abilities on bikes, skateboards, roller blades and scooters.

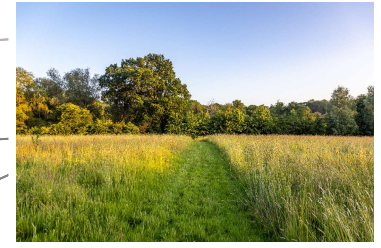

New native thicket and small tree species give structure to the open spaces and enhance biodiversity as well as creating variety and interest. Species could include dogwood, hazel, hawthorn, spindle, privet, rose and elder.

Habitat features such as log piles provide shelter and a food source supporting a wide variety of species.

Fences restrict access to the ancient woodland.

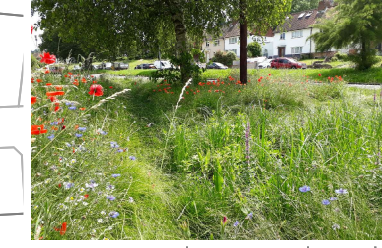

Mown grass paths run through meadow in the more natural part of the park, including a section of Public Right of Way.

Standalone pieces of play equipment create a natural 'play on the way' experience.

Swales will be planted with a suitable wet meadow mix.

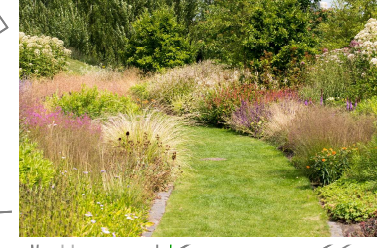

Ornamental shrubs provide structure and interest under the overhead lines where trees would not be suitable. Species could include hazel and dogwood which can be coppiced.

A range of seating options including south facing loungers create inviting places to stop and meet.

Perennial planting interspersed with structural shrubs provides an attractive backdrop to the open spaces, with year-round structure and changing textures and colours through the seasons.

A Neighbourhood Equipped Area for Play (NEAP) catering for toddlers up to teenagers will be designed with natural materials such as timber and stone, encouraging exploratory, imaginative play. Play provision for older children will be located to the west, and could include features such as ping pong tables, with play provision aimed at younger children to the east. Seating and picnic benches will be located within and adjacent to the space.

Existing structural shrubs to be maintained and enhanced.
