Supplementary Glazing Information

In response to letter 25/01462/LBC

1. Replacement Roof Lanterns

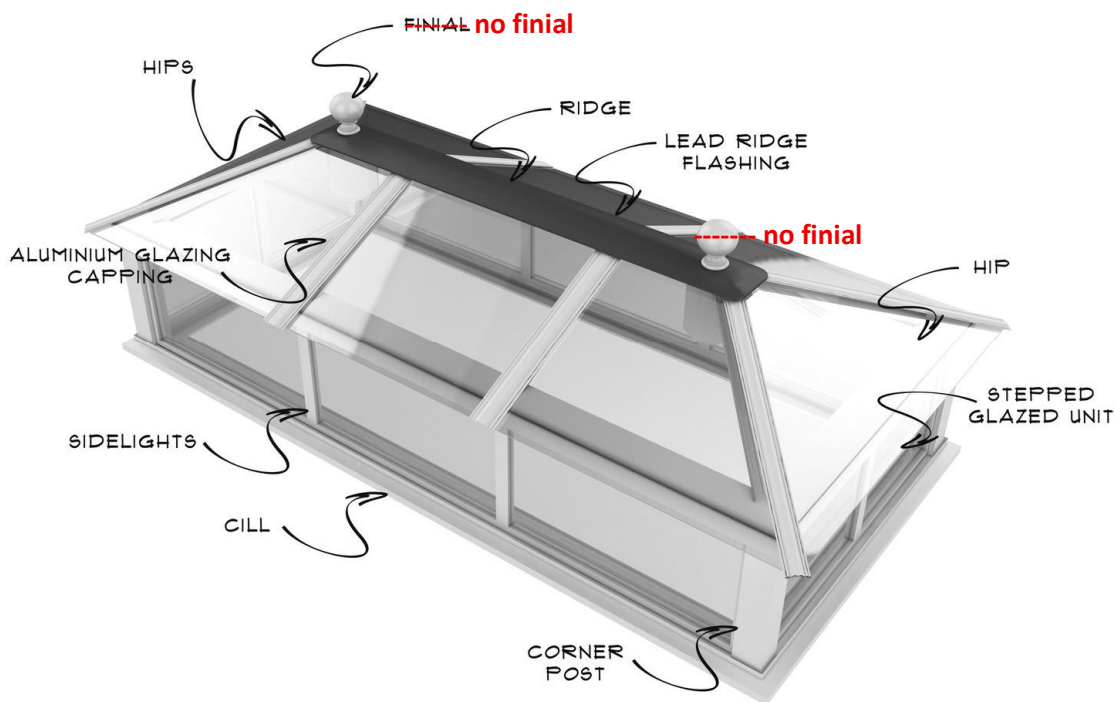

The proposed replacement roof lanterns are intended as a 'like for like' replacement. They have a hipped roof lantern design with opening sidelights.

They are fully painted hardwood timber lanterns with double glazed units (U value 1.2 W/m2K) and powder coated aluminium cappings externally. The proposed colour is RAL 9019 - pure white.

They have obscure glazing with the Ambi-Satin Privacy glass.

The proposed replacement has no external decoration on top of the ridge to match the existing. The finial on the manufacturers image is not proposed - as noted below.

Standard Hipped Roof Lantern with Sidelights

2. Proposed Rear Windows

The existing (and retained) two windows within the office space are both casement windows in white uPVC.

The proposed rear windows are both double glazed top-hung awning windows in white UPVC. The proposed uPVC system has a slim-profile mullion and frame design. The specification includes high-performance, thermally efficient profiles with a multi-chambered frame construction to meet or exceed current Building Regulations for insulation and air tightness.
